Abstract

We describe the research dataset "Investment Funds Statistics Base" (IFS-Base) using a structured metadata schema.[1)] This document consists of three sections. In the first section, we describe the general properties of the dataset as a whole, such as its scope and coverage as well as the methods of data collection and data appraisal. The second section looks at the variable level, providing an overview and detailed tables for each variable. In addition, this section looks at the value level and provides codelists, i.e. information on the meaning of values for categorical variables. The third section provides relevant definitions.

1 Dataset description

1.1 Overview and identification

Title of Dataset

Investment Funds Statistics-Base

Abbreviation

IFS-Base

Dataset abstract

The "Investment Funds Statistics-Base" (IFS-Base) is the core module of the Deutsche Bundesbank's Investment Funds Statistics (IFS). The motive behind creating the IFS-Base is to obtain detailed information on the assets and liabilities of German investment funds (public and specialised funds). Investment funds data are indispensable for monetary policy analyses as any redistribution of investment funds' assets may affect financial markets. Financial stability analysis makes use of the data in order to analyse investment funds' exposure to individual counterparties and thus measures interconnectedness in the financial sector. In addition, the data is used to monitor shadow banking activities. Information on the composition and quality of the portfolios of investment funds is used to better understand their investment behaviour.

For the IFS, investment companies and public limited investment companies domiciled in Germany, who are within the meaning of the German Capital Investment Code (Kapitalanlagegesetzbuch – KAGB), report general information about their funds (e.g. the fund ISIN or the type of the investment fund) as well as detailed information on the fund's assets and liabilities. The IFS is collected by means of a full census, i.e. every reporting agent has to send a report for each investment fund issued.

The reporting agents provide information on the asset items of the investment fund broken down by securities (i.e., on a security-by-security basis), bank deposits, loans to property companies, borrowers' note loans, other credit claims, financial derivatives, developed and undeveloped land, participating interests, and other assets.

The reporting agents further state the amount of the liabilities listed according to loans taken up, financial derivatives, and other liabilities. In addition, the data provides information on the number of units sold and outstanding, the issuing and repurchasing price per unit, income from the sale of fund units, outflows from the repurchase of fund units, and earnings distribution for each investment fund.

Reporting Agents: Germany
Fund assets: Worldwide

Universe

All investment and public limited investment companies within the meaning of the German Capital Investment Code (Kapitalanlagegesetzbuch – KAGB), who are domiciled in Germany, are obliged to report general information (e.g., the fund ISIN, type of investment fund, etc.), the amount of the fund assets, as well as a detailed breakdown by value of all asset and liability items.

Investment funds can be distinguished by organisation type (closed-end vs. open-end funds), type of unit holders (funds open to the general public and specialised funds), and investment strategy (equity funds, bond funds, real estate funds, hedge funds, money market funds, etc.).

The data collection involves detailed information on the fund's portfolio, i.e., securities (debt securities, shares and investment fund units), bank deposits, loans, financial derivatives, developed and undeveloped land, and other assets and liabilities.[3)]

Securities are reported on a security-by-security basis, meaning that all securities held are reported with their International Securities Identification Number (ISIN) resp. their Internal Securities Number, the amount or number of units held including the price as percentage resp. per unit. Since the importance of securities repurchasing and securities lending transactions has increased in recent years, securities holdings which are passed on or acquired as part of such contracts are to be flagged separately.

Historical changes

With its Investment Funds Statistics, the Bundesbank has a long history in collecting investment funds data. Initially, only aggregated data on the assets and liabilities of investment funds were collected on a monthly basis.

Since September 2009, this has changed substantially:

- In September 2009, the Bundesbank set up a detailed data collection system based on a security-by-security basis at monthly frequency.
- In December 2014, the scope of reporting items was increased in order to close data gaps and to fulfill the users' increased data needs. For instance, a separate recording of securities lending and the issuance of index funds has been implemented. In order to be able to capture the business processes of all investment funds, reporting positions were added, particularly in the area of non-financial assets. Furthermore, the instrument and sector classifications were changed from ESA95 to ESA2010-classification.
- Since December 2025, non-financial assets as well as participating interests are collected at a granular level, each item is recorded individually using an identifier. For instance, each single asset of real estate property is included. Moreover, the scope of reporting items was slightly increased by e.g crypto assets.

3 The term security and the distinctions between the various types of securities are in line with the definitions of the European System of Accounts (ESA), 2010.

Special features of the IFS-Base:

In the interest of data privacy protection, the IFS-Base does not contain the same information which is available in the IFS. Two major modifications have been made:

- In contrast to the IFS, the IFS-Base does not contain any identifiers for the investment fund other than the fund's ISIN.
- Closed-end investment funds, which have to report for the IFS, are not included in the IFS-Base.

1.3 Data collection

Data collection mode

Reporting agents send their reports electronically via the portals NExt or AMS of the Deutsche Bundesbank (format of submitting reports: XMW XML-data format).

Supervision

The German competent authority (Bundesanstalt für Finanzdienstleistungsaufsicht, BaFin) informs new investment funds about their reporting obligation to the Bundesbank. In addition, the Bundesbank regularly checks the list of investment funds as published by BaFin in order to identify new investment funds.

New reporting agents can seek out all reporting requirements in the guidelines on investment funds statistics.[4)] In addition to the guidelines, the reporting agents can consult the FAQ to help answer any open questions.[5)]

In order to identify non-filers, after the end of the reporting deadline (the fifth workday of the following month), the production system of the Deutsche Bundesbank generates a list of agents who have not reported until that date. An e-mail is sent to the respective reporting agents with the request to submit the data.

1.4 List of aggregates

On the Bundesbank homepage you can find some aggregates which are calculated using the IFS: https://statistiken.bundesbank.de/statistiken-en/search/BBSF2

For more detailed figures, please refer to the publication "Statistical Series Investment funds statistics"[6)].

Some of those aggregates may include:

- Funds' total assets
- Funds' credit assets
- Funds' credit assets, of which lending
- Funds' long term assets
- Funds' liquid assets
- Funds' assets under management (AUM)

1.5 Data appraisal

Quality checks

DISCLAIMER: The following quality checks are carried out for the Deutsche Bundesbank's Investment Funds Statistics (IFS). They also apply to the IFS-Base.

Standardised quality checks aim to identify any irregularities or implausibilities in the data structure. If necessary, the reporting institutions are asked to double check or clarify the flagged data points.

In order to identify erroneous data fields, there is an automated formal check on the data submitted by the reporting agents. If this check raises any formal errors, the production system will not accept the submitted data. For every reporting agent, the system generates a document which contains the errors in the submitted data file. The reporting agent receives the document via email. In case of errors, the reported data needs to be submitted again.

Formality checks:

- The sum of the sub-positions needs to equal the total of the position (until 2025/11).
- The net asset value, the inflows and outflows, etc. need to be filled.
- The country and currency codes need to comply with the ISO-standard.

6 https://www.bundesbank.de/action/en/732100/bbksearch?tf=815054%3A814210%7C%7C

Consistency checks:

- The data dimensions of positions and sub-positions need to be equal (until 2025/11).
- The comparison of reported values with the transmitted data of the previous month needs to be plausible.

A variety of other plausibility checks are performed for each reported investment fund. These checks identify all formal errors for each reporting agent. In case of errors, an e-mail containing these errors is sent to the respective reporting agent with the request to correct the data within three days.

Data editing

DISCLAIMER: The following data editing steps are carried out for the Deutsche Bundesbank's Investment Funds Statistics (IFS). They apply to the IFS-Base in parts.

1. Data transmission by reporting agents: reporting deadline is the fifth working day of the month following the reference month.
2. First level of checks: standardised plausibility and completeness checks (see "Quality Checks") and feedback to reporting agents
3. Second level of checks: consistency checks (see "Quality Checks")
4. Combination of IFS data with the securities data from the Centralised Securities Database (CSDB); only for securities with an ISIN and only for IFS data
5. Production of time series / building blocks
6. Release of data, publication

1.6 Data accessibility

Research proposal conditions

A research proposal requesting access to the IFS-Base is checked for feasibility given the desired research data, i.e. the suitability of the data to answer the research questions raised by the proposal. The research project must be of public interest, that is, without commercial goals.

Institutional access conditions

The researcher must be affiliated with a research institution which clearly has a scientific, noncommercial agenda.

Protecting confidential information

Each fund in the IFS-Base can be uniquely identified via its International Securities Identification Number (ISIN). The ISIN variable contains the entities worth protecting. The Statistical Disclosure

Control (SDC) must be conducted on these protected entities.

In addition, a fund may consist of several share classes each of which has its own ISIN. All ISINs belonging to the same superordinated fund must be treated as a single entity for the SDC. Whether a certain ISIN is affected can be deducted from the variables HIERACHY and SUPF. If an ISIN is a share class belonging to a superordinated fund, the variable HIERACHY equals 4 (Share class) and the variable SUPF indicates the identifier of the superordinated fund.

Therefore, if results (partially) contain share classes, the SDC must be conducted on a variable that equals the SUPF-Identifier for funds with a superordinated fund (if HIERACHY == 4), and on the ISIN for any other funds.

2 Description of variables

2.1 Overview of variables

Name	Label
DATE	Data is reported for last day of this month
ISIN	International Securities Identification Number of the fund
APPLAW	Applicable legislation for the reporting fund
FCAT	Type of investment fund by investment focus
FFCAT	Type of fund of funds by investment focus
ORGFORM	Organisational form of the investment fund by legal form
INVTYPE	Type of investment fund by investor group
UCITSAIF	Shows whether the fund is UCITS or AIF
CAPPROT	Shows whether the fund is a capital protection fund or not
DISGROW	Type of fund according to income use
FMAT	Type of fund by maturity
REPOCAT	Type of fund unit repurchases
REPOSUS	Shows whether the fund's unit repurchases are suspended or not
SUSDATE	Suspension date
QUOT	The investment fund's quotation type
INDXF	Shows whether a fund is an index fund or not
ETFF	Shows whether a fund is an exchange traded fund (ETF) or not
INDREP	Type of index replication
INDISIN	ISIN of the replicated index
INDNAME	Name of the replicated index
HIERARCHY	Superordinated fund (hierarchy levels)
SUPF	Identifier of the superordinated fund
DISF	Shows whether the fund is dissolved or not
SUBPOS	Sub-positions of the fund's total assets and all other positions of the reporting forms
AMOUNT	Amount which corresponds to SUBPOS
ESA1995	Issuer sector of SUBPOS
ESA2010	Issuer sector of SUBPOS
CNTRY	Country of the reported SUBPOS
CNTRYGRP	Country group of of the reported SUBPOS
CURRENCY	Currency code of the reported SUBPOS according to ISO 4217 code list
CURGRP	Shows whether the currency is Euro, part of the EU or does not belong to the EU
SECCODE	Security code of the security held by the fund (ISIN or internal security code)
SECISINDUM	Shows whether a security has an ISIN or not
SECQUOT	Shows the quotation type of the security

...

SECTERMBGN	Date term start
SECTERMEND	Date term end
SECMAT	Maturity of the security
TERM	Term for everything which is not a security (e.g. credits, holdings)
MINRES	Shows if an institution is subject to a minimum reserve requirement (must only be completed for money market funds)
AFFILCOMP	Shows whether an institution has an affiliated company or not
NUMOBJ	Shows how many non-financial assets the fund owns in a particular country
USETYPE	Filled only for developed land
OBJECT_ID	fund-internal object ID for non-financial assets and participating interests

2.2 Details of variables

DATE: Data is reported for last day of this month

Notes	Date in the format "YYYYMM"
Available from – to	2009-09 – 2025-12
Source	IFS-Base
Type of variable	numeric

ISIN: International Securities Identification Number of the fund

Notes	The ISIN code is a 12-character alpha-numerical code which uniquely identifies a security. In case of the IFSBase, the ISIN variable shows the ISIN of the reporting fund. The structure of the ISIN is defined in ISO 6166. By using the ISIN, information about the respective fund can be linked to the IFS-Base (e.g. information on prices, dividends, stock splits etc.).
Available from – to	2009-09 – 2025-12
Source	IFS-Base
Type of variable	fixed string

APPLAW: Applicable legislation for the reporting fund

Notes	In the standard case, the APPLAW for the reporting fund is "DE", i.e. the applicable law regime relevant for the reporting fund is the German legislation. In case APPLAW is not "DE", the codelist of the variable CNTRY applies. Country codes are provided according to the two-digit ISO 3166-2 country code.
Available from – to	2014-12 – 2025-12
Source	IFS-Base
Type of variable	fixed string

FCAT: Type of investment fund by investment focus

Notes	
Available from – to	2009-09 – 2025-12
Source	IFS-Base
Type of variable	fixed string

FFCAT: Type of fund of funds by investment focus

Notes	In FFCAT you can find more detailed specifications if FCAT = "7" (fund of funds).
Available from – to	2009-09 – 2025-12
Source	IFS-Base
Type of variable	numeric

ORGFORM: Organisational form of the investment fund by legal form

Notes

Type of variable	numeric

REPOSUS: Shows whether the fund's unit repurchases are suspended or not

Notes	
Available from – to	2014-12 – 2025-12
Source	IFS-Base
Type of variable	string

SUSDATE: Suspension date

Notes	If the fund's unit repurchases are suspended, SUSDATE gives the date since when the suspension applies (date in format YYYYMM).
Available from – to	2014-12 – 2025-12
Source	IFS-Base
Type of variable	numeric

QUOT: The investment fund's quotation type

Notes	
Available from – to	2014-12 – 2025-12

UCITS

A UCITS fund is an investment fund under the Undertakings for Collective Investment in Transferable Securities Directive 2009/65/EC. This consolidated EU Directive allows collective investment schemes to operate freely throughout the EU on the basis of a single authorization from one member state. One focus of the Directive is on the regulation of the permitted assets into which a UCITS may invest (eligible assets). EU member states are entitled to have additional regulatory requirements for the benefit of investors.

AIF

Under the AIFM-Directive (Directive 2011/61/EU), an alternative investment fund or "AIF" is any collective investment undertaking, including investment compartments thereof, which raises capital from a number of investors with a view to invest it in accordance with a defined investment policy for the benefit of those investors and which does not require authorization pursuant to the UCITS Directive.
