## 1 Introduction

- This document outlines the XML schema for the Bundesbank's Securities Holdings Statistics, which replace the securities deposit statistics as of January 2013.
- This document is aimed at technicians and assumes familiarity with XML. Information on XML can be found on the World Wide Web Consortium's (W3C) website at <http://www.w3.org/>. For a quick introduction, see the XML tutorials at <http://www.w3schools.com/>.
- This XML schema is based on the XML schema for securities deposits statistics. The report structure remains more or less the same. However, in some cases the content is different, meaning that downward compatibility is not given (ie a report that is valid pursuant to the current XML schema for securities deposits statistics is no longer valid for Bundesbank's Securities Holdings Statistics). This break in compatibility is mainly due to changes to the European System of Accounts (ESA) 2010 regarding depositor sectors. In addition, the coding of information relating to securities without an official ISIN code (internal SIN) has also been changed. Banks have the option of including the new information on book values and securities that are attributed to the trading book portfolio for their own holdings in the WplInvest schema up to and including the December 2013 reporting date; from then on it will be mandatory to report this information. Seen in isolation, these changes do not mean the statistics are no longer compatible with the schema for securities deposits statistics. The XML schema is not only used for the holdings report broken down by depositor sectors of all the reporting institutions but also for the group reports of selected "systemically important" institutions to be handed in separately, broken down by affiliated enterprises.

## 2 Conversion timeframe

### As of the January 2013 reporting date

- Changeover from quarterly to monthly reporting cycle
- Data to be submitted by the sixth business day of each month
- Implementation of changes to ESA 2010 relating to depositor sectors
- Changes to internal SINs

### As of the December 2013 reporting date

- Collecting data on own holdings of bank groups at group level

### As of the January 2014 reporting date

- Reporting of book values for banks' own holdings
- Labelling of banks' own securities that are to be attributed to the trading portfolio Group reports

### 3 Differences to current format

The following list shows the differences compared to the current XML format for securities deposits statistics.

- The schema for Bundesbank's Securities Holdings Statistics (WplInvest schema) no longer uses the namespace of the included, former banking statistics basic schema but instead defines a new namespace. As a result, the elements of an XML instance have to be qualified in line with their namespace. The simplest way of doing this is for all WplInvest elements to be in the default namespace, ie for all elements from the basic schema to be given a prefix (eg "bbk:" or "basis:"); none of the WplInvest elements require a prefix (see the sample file).
- The "korrekturtyp" (correction type) attribute, which is mandatory in the current schema for deposits statistics, is no longer required.
- In addition to quarterly dates YYYY-03/06/09/12, the reporting date can also be a monthly date. All months between 2013-01 and 2029-12 are permitted.
- All elements that contain the names of depositor sectors have been brought into line with the new sector names pursuant to ESA 2010 (parts II and III of the report).
- When entering information about the number of customer deposits, all customer deposit sectors have to be listed that contain amounts in parts II/III of the report. Sectors without amounts can be listed with the number 0 or can be left out.
- In part III of the report, in the own holdings sectors 1221 to 1224, the only attribute permitted under the holdings elements is the country "DE".
- The schema checks that a security held in a bank's own portfolio appears in only *one* of the own holdings sectors 1221 to 1224.
- Each data record may contain only one holding element – either "B" or "B-", ie the items have to be offset.
- As of January 2014, additional holding elements will be available for the own holdings sectors to report information about trading book portfolios ("H" or "H-"), book values of total holdings ("BW" or "BW-") and book values of trading book portfolios ("HBW" or "HBW-"). These elements are optional. However, if these elements are reported, they have to be offset, as in the case of holding elements "B" or "B-".
- The ISIN element no longer contains the optional attribute "wplnr".
- The following changes have been made to information for the internal SIN (see the sample report).

- The internal identification number is to be given in ISIN, SEDOL or CUSIP format. For this purpose, there are three elements: WPNR-FORMAT-ISIN, WPNR-FORMAT-CUSIP and WPNR-FORMAT-SEDOL, one of which has to be used (see the "Internal SIN" code list).
- The "KEIN-KURS" element no longer exists and the "KURS" element is now optional, thus making it possible to report the absence of prices.
- Internal SINs are included either in the "debt securities" (element F3) or in the "equity and mutual funds shares" (element F5) category. Information about maturity has to be specified in element F3 only. Here the type of security F.31 or F.32 has to be selected as an attribute. In the case of interest-bearing securities, the interest rate and due date are specified in the "ZINS" sub-element, as is the information as to whether it is a fixed or variable rate security. It is not possible to enter information about maturity or interest rate in element F5; a type of security has to be selected from F.511, F.512 or F.52.
- The "EMGRUPPE" element should contain an ESA 2010 sector (see the "Issuer group" code list).
- The "EMLAND" element should contain an ISO country code.
- Besides nil reports and holdings reports, there are separate types of forms for group reports.
  - The depositor sector is replaced by the (7 or 8 digit) creditor number of the group enterprise
  - It is implied that the country of residence of the depositor is also the country of residence of the relevant subsidiary/branch
  - It is indicated for each security whether it is an intra-group issuance (at the level at which the reporting currency appears in the sectoral breakdown of the report)

## 4 Code lists

### **ISIN (schema: [ISIN](#))**

ISIN of the security according to ISO 6166

### **Internal SIN**

#### **(schema: [WPNR-FORMAT-ISIN](#) [WPNR-FORMAT-CUSIP](#) [WPNR-FORMAT-SEDOL](#))**

The internal SIN is to be given in one of the following formats.

Internal number in the same format as the ISIN – 12 characters, alphanumeric

CUSIP (Committee on Uniform Security Identification Procedures) – 9 characters, alphanumeric

SEDOL (Stock Exchange Daily Official List) – 7 characters, alphanumeric

### **Security name (schema: [NAME](#))**

Unique security name

### **Security currency (schema: [isoWaehrung](#))**

Currency code according to ISO 4217

### **Security price (schema: [KURS](#))**

Price as a percentage – for securities quoted as a percentage

Price per unit – for securities quoted by unit

### **Security type (schema: [F3 F5](#))**

Element consisting of four to five characters that describes the type of security (according to ESA 2010) pursuant to the following code list.

F.31 Short-term debt securities

F.32 Long-term debt securities

F.511 Listed shares and participating certificates

F.512 Unlisted shares and participating certificates

F.52 Investment fund shares or units

### **Security maturity (schema: [F3](#))**

Start date (issue date)

End date (repayment date)

Only for F.31 and F.32

### **Interest rate (schema: [F3 ZINS](#))**

Only for fixed rate and variable rate F.31 and F.32

### **Interest due date (schema: [F3 ZINS](#))**

Only for fixed rate and variable rate F.31 and F.32

**Issuer group (schema: EMGRUPPE)**

Element consisting of four to six characters that describes the issuer sector (according to ESA 2010) pursuant to the following code list.

- S.11 Non-financial corporations
- S.121 The central bank
- S.122 Banks
- S.123 Money market funds (MMF)
- S.124 Non-MMF investment funds
- S.125 Other financial intermediaries, except insurance corporations and pension funds
- S.126 Financial auxiliaries
- S.127 Captive financial institutions and money lenders
- S.128 Insurance corporations
- S.129 Pension funds
- S.1311 Central government
- S.1312 State government
- S.1313 Local government
- S.1314 Social security funds
- S.22 International organisations

**Issuer country (schema: EMLAND)**

Country code according to ISO 3166

**Nominal currency/unit (schema: isoWaehrung)**

- Currency code according to ISO 4217 – for securities quoted as a percentage
- XXX – for securities quoted by unit

**Sector (= depositor group) (schema: bestandTyp)**

Element consisting of four to five characters that describes the depositor sector (according to ESA 2010) pursuant to the following code list.

- 1100 Non-financial corporations
- 1211 For internal Bundesbank purposes
- 1212 For internal Bundesbank purposes
- 12131 For internal Bundesbank purposes
- 12132 For internal Bundesbank purposes
- 12133 For internal Bundesbank purposes
- 12134 For internal Bundesbank purposes
- 12135 For internal Bundesbank purposes
- 12136 For internal Bundesbank purposes
- 1215 Foreign central banks
- 1216 For internal Bundesbank purposes
- 1221 Monetary financial institutions in Germany – own holdings – direct investment
- 1222 Monetary financial institutions in Germany – own holdings – own debt securities
- 1223 Monetary financial institutions in Germany – own holdings – own shares
- 1224 Monetary financial institutions in Germany – own holdings
- 1225 Foreign banks – excluding central securities depositories

- 1228 Foreign central securities depositories
- 1230 Money market funds (MMF)
- 1240 Non-MMF investment funds
- 1251 Other financial intermediaries (excluding insurance corporations and pension funds) – excluding financial vehicle corporations
- 1252 Financial vehicle corporations
- 1261 Investment companies
- 1262 Financial auxiliaries – excluding investment companies
- 1270 Captive financial institutions and money lenders
- 1280 Insurance corporations
- 1290 Pension funds
- 1311 Central government
- 1312 State government
- 1313 Local government
- 1314 Social security funds
- 1400 Households
- 1500 Non-profit institutions serving households

#### **Sector country (= depositor country) (schema: [isoLand](#))**

Country code according to ISO 3166

## **5 Example of a sectoral breakdown of a holdings report**

The following sample file conforms to the schema. The content is random and should not be considered realistic. The path to the schema file ("PATH") contained in the root attribute has to be brought into line with the local environment.

## 6 Example of a group report

The sample file below illustrates the structure of a group report. In this context, it is not the own holdings sector but the individual group enterprises that are used for the breakdown of the holdings. In turn, each group enterprise sends reports broken down by the countries of residence of its

subsidiaries and branches. A group report should not contain any book values. It is to be indicated for each securities holding whether or not it is an intra-group issuance.

## element wpTyp/BESTAND

diagram	<p>The diagram illustrates the structure of the <code>wplinvest:bestandTyp</code> element. It features a central yellow box labeled <code>wplinvest:bestandTyp</code> containing an <code>attributes</code> section with a <code>dim</code> attribute. Below this are two lists of attributes: one starting with <code>wplinvest:S1100</code> and another starting with <code>wplinvest:S1210</code>. A dashed line labeled <code>wplinvest:BESTAND</code> connects the <code>dim</code> attribute to the <code>S1210</code> list. To the right of the <code>S1210</code> list, there are four vertical arrows pointing upwards, each labeled with a different scenario: "Sektorelement für Eigenbestände (Möglichkeit 1)" (S1221), "Sektorelement für Eigenbestände (Möglichkeit 2)" (S1222), "Sektorelement für Eigenbestände (Möglichkeit 3)" (S1223), and "Sektorelement für Eigenbestände (Möglichkeit 4)" (S1224). A horizontal association line connects the <code>S1224</code> node to the <code>S1210</code> list.</p>
