

### Sample calculation

Calculation of the equivalent purchasing power (PP) of one Deutsche Mark (DM) from 1990 in 2010 in euro (€):

$$\begin{aligned}
 \text{PP}_{2010} (\text{DM1})_{1990} &= \text{DM1} \times \frac{\text{Price index}_{2015=100} \text{ 2010}}{\text{Price index}_{2015=100} \text{ 1990}} \\
 &\times \text{Conversion rate (€/DM)} \\
 &= \text{DM1} \times \frac{93.2}{64.4} \times \frac{\text{€1}}{\text{DM1.95583}} \\
 &\approx \text{€0.74}
 \end{aligned}$$

Note:

Purchasing power equivalents for amounts from other years can be calculated using the consumer price index time series on the basis of 2010 = 100.
