## Stiffer Credit Policy Measures

### **Renewed Raising of the Minimum Reserve Ratios**

On 5 May this year the Central Bank Council of the Deutsche Bundesbank decided on the fourth raising of the minimum reserve ratios since the change-over to the restrictive credit policy in the autumn of 1959. With effect from 1 June the ratios for the sight and time liabilities subject to the reserve obligation have been raised by 15 per cent, and those for savings deposits by 10 per cent, of what they were in October last year. With the inclusion of the three previous rises — by 10 per cent from 1 November 1959, by a further 10 per cent from 1 January 1960 and by 20 per cent from 1 March 1960 — the minimum reserve ratios for sight and time liabilities are now above their October 1959 level by 55 per cent, while those for savings deposits are above it by 50 per cent. In respect of the addition to reserve-carrying foreign liabilities by comparison with their level at the end of November 1959 the relevant legally permissible maximum ratios have applied without change since 1 January 1960, namely

will rise by roughly a further DM 1,045 million. Allowing for the increase which is to be expected from normal growth of the reserve-carrying liabilities, the required reserve is likely to amount in June to nearly DM 12½ billion, as against not quite DM 7½ billion in October 1959, immediately before the first raising of minimum reserves came into force.

The rise in the reserve-carrying liabilities from about DM 92 billion in October 1959 to some DM 99 billion in April 1960, and the subjecting of the addition to reserve-carrying foreign liabilities to the legally permissible maximum ratios, have resulted in the total required reserve increasing in percentage terms by more than the reserve ratios, namely by about 63 per cent between October last year and June this year. The way in which the raising of the required reserve is distributed between individual groups of banks can be seen from the table overleaf. It shows amongst other things that the reserve required of industrial and agricultural credit cooperatives (including their central

*Minimum Reserve Ratios in force from 1 June 1960*

Reserve class	Credit Institutions with reserve-carrying liabilities of	Reserve ratios (in per cent) for

2	DM 30 million to under DM 300 million	30	30	20	10	10	10
3	DM 3 million to under DM 30 million	30	30	20	10	10	10
4	under DM 3 million	30	30	20	10	10	10

\*) "Bank places" are places with an office of the Deutsche Bundesbank.

30 per cent in respect of the addition to sight liabilities, 20 per cent in respect of that to time liabilities and 10 per cent in respect of that to savings deposits.

By reason of the latest increase the total reserve required of credit institutions (including Postal Cheque Offices and Postal Savings Bank Offices), which at something over DM 11.1 billion in April was greater by about DM 3.7 billion than in October last year,

institutions), that is in the main of institutions which are of great importance for supplying credit to small-scale industry, craftsmen and farmers, has risen since last October by less than that required of the other banks. This tendency becomes even clearer if one compares the new required reserve as calculated for June (on the basis of the April reserve-carrying liabilities) with that for June 1959 (column 5 in the table). As

*Minimum Reserve Required, Classified by Banking Groups*

Banking group	Required reserve April 1960	Rise of required reserve	New required reserve (1 + 2)	New required reserve (June 1960)	
		in June 1960 according to the amount of liabilities in April 1960	(1 + 2)	in p. c. of required reserve in October 1959	June 1959 (%)
	1	2	3	4	5
Millions of DM					
Commercial banks	4,708.4	472.2	5,180.6	162.7	166.8
of which:					
Big banks	(2,784.6)	(279.7)	(3,064.3)	(160.1)	(167.1)
State, regional and local banks	(1,495.4)	(149.5)	(1,644.9)	(166.2)	(164.3)
Private bankers	(363.2)	(36.3)	(399.5)	(168.3)	(172.6)
Specialised commercial banks	(65.2)	(6.7)	(71.9)	(170.8)	(186.8)
Savings institutions	4,474.0	397.1	4,871.1	163.6	163.2
of which:					
Central giro institutions	(499.3)	(53.0)	(552.3)	(157.8)	(158.7)
Savings banks	(3,974.7)	(344.1)	(4,318.8)	(164.4)	(163.8)
Industrial credit cooperatives and their central institutions	625.3	56.4	681.7	162.2	159.6
including:					
Industrial credit cooperatives	(608.8)	(54.7)	(663.5)	(161.3)	(159.0)
Agricultural credit cooperatives and their central institutions	642.7	55.0	697.7	162.1	148.3
All other credit institutions subject to the reserve obligation	687.2	64.5	751.7	164.8	161.7
Total	11,137.6	1,045.2	12,182.8	163.1	163.5

<sup>9)</sup> From this comparison the reserve required from the Saarland credit institutions in June 1960 (according to the amount of liabilities in April 1960) was excluded, except for a small residue which cannot be eliminated, because in the basis month the said institutions had not yet been subject to the reserve requirement.

a result of the change which was made in August last year in the minimum reserve structure<sup>1)</sup>, and which especially favoured the smaller institutions, the increase in the required reserve for the agricultural credit cooperatives in particular was much smaller than on the average for all banks. The same applies, although not so markedly, to the industrial credit cooperatives and their central institutions.

#### Recent Cyclical Trends

The reasons why the Bundesbank has repeatedly raised the minimum reserve ratios since the autumn of last year were fully described in our Report for the Year 1959, which appeared in English at the end of May this year; in that connection it was also stated that the Bundesbank was determined "to make even fuller use of its instruments of credit policy, if it should turn out that the increase in demands on the national product cannot be kept in line with the possibilities of enlarging it, and in particular with the possible raising of the total number of man-hours worked"<sup>2)</sup>. As is shown by the more recent data now available, the cyclical strains have in the past few weeks increased rather than decreased. It is true that during the past months tendencies towards relaxation have in many

respects been apparent, such as the great increase in supplies through the expansion of industrial and building output, which was in particular made possible through better use of the winter months (when employment was previously low) as well as by a continuing great elasticity of production. In addition there was apparent a certain slowing of the rises induced in demand by the stock cycle in some industries producing consumer goods and basic materials. In the other sectors of the economy the expansion of demand has continued undiminished, however, and has further increased the already existing excess of demand over supplies. In the sphere of capital investment, in particular, the discrepancy between the greatly enlarged demand and the more limited possibilities of expanding supply has widened further. A pointer to this is the great growth of enterprises' planned capital projects, a consequence of which has been that the orders reaching the most important capital goods industries exceed more than ever the possibilities of delivery. The orders given by trade and industry for building have further greatly increased and, since the placing of orders for building on public account and for housing purposes has not been reduced but has also been enlarged, it must be expected that the overstraining of the building trade at the height of this year's season will be if anything even more pro-

<sup>1)</sup> See the Monthly Report of the Deutsche Bundesbank for July 1959, p. 53 seq.

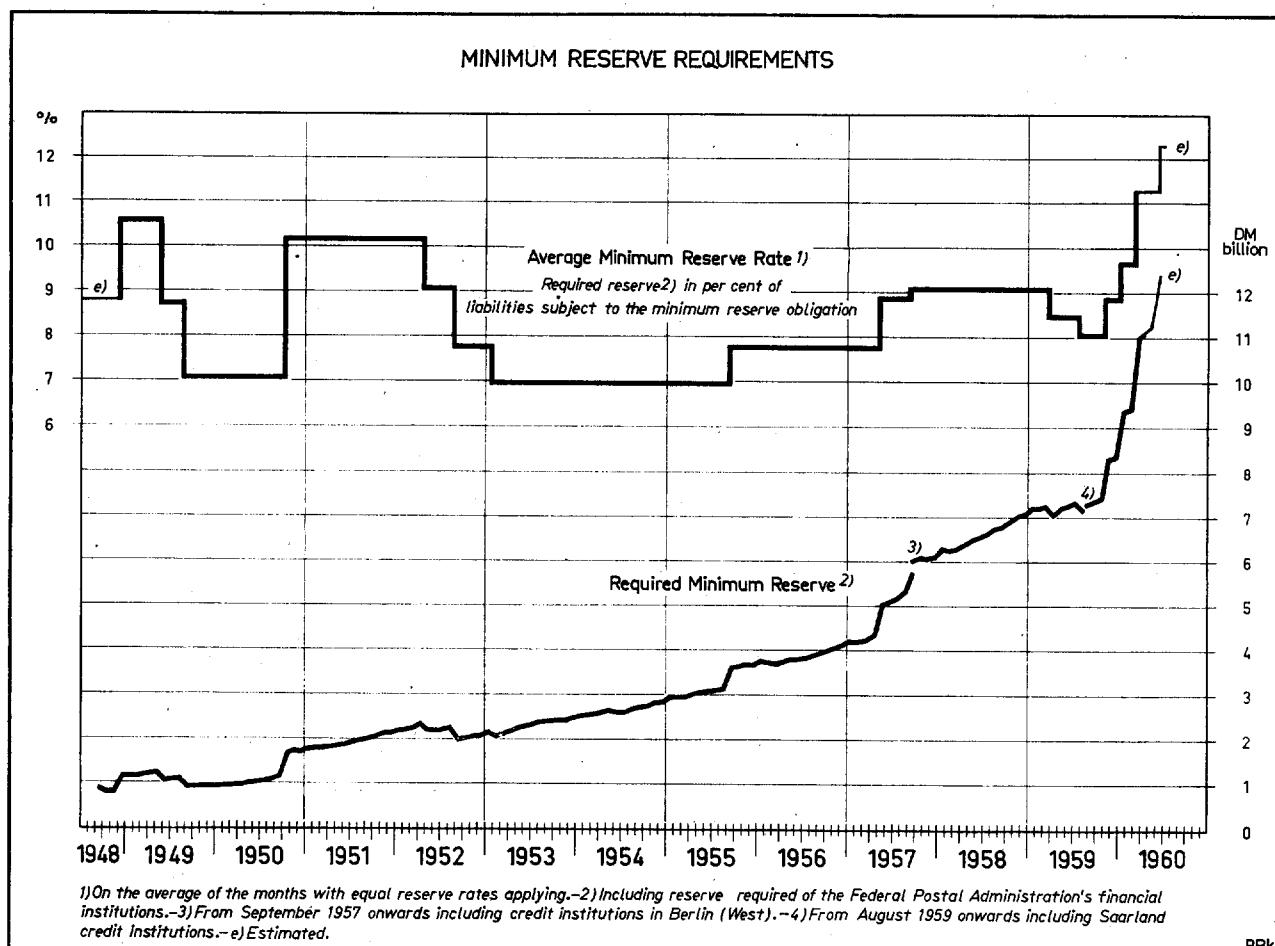

<sup>2)</sup> See the Report of the Deutsche Bundesbank for the Year 1959, page 5.

nounced than last year. Finally the demand from abroad has increased in almost the same degree as before.

The excessive demand on domestic production capacities is most visibly reflected in further straining of the position in the labour market. By the end of April this year the number of unemployed was already down to the seasonal low reached in September of last year, and the number of unfilled vacancies registered at labour exchanges reached two and a half times the number of those unemployed. Consequently employers' competition for labour, now extremely scarce, has grown keener; and accordingly their readiness to make voluntary wage concessions outside collective agreements has grown. There is the further fact that in the numerous recently concluded wage agreements much greater wage increases have been conceded than even a short time before. According to the reports so far available, between the beginning of April and the beginning of June this year collective wage increases came into force for about 7 million employed persons on the basis of newly concluded agreements, the hourly wages or salaries being on the average raised by roughly 7 per cent (exclusive of wage adjustments made purely to com-

pensate for reduction of working hours), whereas a year previously the ratio of increase in newly concluded agreements had averaged 4 per cent. Since at present evidently only a small part of these income increases is additionally saved, the speeding up of the rise in wages has already clearly affected private consumption, as is shown by the great cyclical growth of retail turnovers in March and April. Thus total demand has also received an increased upward impulse from ultimate consumption.

The reason why until recently the market tensions had led to major price rises only in certain fields, especially in the building trade and the consumer goods industries, while producers' price indices in the rest of industry have for the present changed only slightly, is no doubt partly that the first stage of price rises — namely the terminating or reduction of discounts — escapes statistical recording. Of late however even the indices based on list prices in some important industries, such in particular as mechanical engineering, steel construction and hardware manufacture, have shown notable price increases. Clearly the recent raisings of wages have in many cases been made the occasion for raising prices too. In view of the great extent of the

wage increases coming into force in the near future, and the accelerated growth of ultimate consumption, the danger that the overall price level may rise faster than before has become still greater. The Bundesbank therefore found itself obliged to stiffen its restrictive measures still further. In doing so it aimed above all at not permitting further growth of the banks' liquidity margin, and hence of their capacity for greater credit expansion, or — to be more precise — at neutralising the fresh increase in the banking system's liquidity which has been apparent since the previous raising of the minimum reserve ratios came into force.

#### The Movement in Liquidity since the last Minimum Reserve Ratio Increase

After considerable reduction of the banks' free or easily mobilisable liquidity reserves had been achieved by the end of March this year through the previous restrictive measures, especially through the repeated raising of minimum reserves and the two successive cuts in the rediscount quotas, their liquidity margin greatly widened in April; and in May it would seem to have grown further, although to a lesser extent. This is in particular shown by the fact that the banks were able greatly to reduce their rediscount and similar liabilities to the Bundesbank, whereas in every month of the first quarter they had on balance borrowed there. On the average of the four bank return dates in April the total credit taken by banks at the Bundesbank on bills and by way of advances was — at DM 1.82 billion — less by about DM 640 million than the corresponding amount in March this year, although greater by some DM 570 million than last December. The reduction went further in May. On the average of the first three bank return dates in that month the banks' liability in respect of borrowing from the Bundesbank was smaller by about DM 490 million than for the corresponding dates in April 1960.

In the same way as hitherto the increase in the banking system's liability was primarily due to foreign exchange movements, the more so since at roughly DM 1.18 billion the banks' net sales of foreign exchange to the Bundesbank in April were again somewhat greater than the preceding months' totals of DM 1.15 billion in March and DM 900 million in February. Although, according to the partial data so far available, some slowing can be expected in May (in the first 25 days of that month the banks' sales of exchange to the Bundesbank reached some DM 750 million against DM 1.04 billion in the corresponding period of April), the influence tending to increase liquidity has remained very great.

The forces operating against such tendencies to increase liquidity were relatively weak in the last two months. Apart from the rise — entirely due to the growth of reserve-carrying liabilities — in the required reserve, which rise amounted in April to little more than DM 100 million and would hardly seem to have been any greater in May, the increase in the note and coin circulation calls for special mention. It is true that the total amount of circulating DM notes and coin rose considerably in April 1960 because of the public's increased demand for cash at Easter (the rise being calculated on a daily average at about DM 435 million); but in May, partly as a reaction to this, it seems to have grown little further; at all events on the average for the first 22 days of that month it was roughly at the same level as for the corresponding period of the month before.

In June indeed some temporary withdrawal of liquidity from the banks may be expected to result from the quarterly main tax payment, and from the public authorities' cash surplus which normally goes with it. In view of the strained cyclical situation, and of the fact that the banks have so far evidently not been sufficiently constricted on grounds of liquidity in their granting of credit, a stiffening of the measures affecting liquidity through a renewed raising of the minimum reserves was clearly called for.

\*) From January 1960 onwards including the Saarland. — 1) Including holdings of domestic Treasury bills and non-interest-bearing Treasury bonds, but excluding "mobilisation paper". — 2) Including medium-term notes issued by banks.

### Credit Expansion

As we showed in detail in our recently published Report for the Year 1959, for the first six months of the restrictive credit policy (that is from October 1959 to March 1960) no effective check to the expansion of credit by the banks was discernible. The total credit extended by the banks in that period, including their investments in securities, greatly exceeded the credit expansion in the corresponding period of last year. It could of course hardly be expected that the Bundesbank's credit policy measures would act so quickly that their effect would already appear in the figures for the immediately succeeding months. Still, they have in recent months already produced quite clear effects in one sphere. Since the autumn of 1959 the banks have drastically cut down

their acquisition of securities, while since March 1960 the banks as a whole have actually reduced their security holdings. In their short, medium and long-term lendings on the other hand no clear effect can yet be seen, even though their expansion in April and the first weeks of May in some important fields no longer continued at the same pace as before. While the credit institutions' "potential" liquidity (i. e., in particular, credit balances or money-market investments abroad, holdings of domestic money-market paper, and unused rediscount quotas) has noticeably tightened since last autumn, the pressure on bank liquidity has so far not been strong enough to enforce on the banks any perceptible reduction of their lending activity, such as would be needed in a drive for restoring the balance between supply and demand.

# The European Monetary Agreement

The change-over of West European currencies to convertibility in relation to the U.S. dollar, effected at the end of 1958, made the previous distinction between different "currency areas" and "methods of payment" groundless, and thereby also removed the basis for the European Payments Union (EPU). Its place was taken by the European Monetary Agreement (EMA)<sup>1)</sup>. The latter had been worked out within the Council of the OEEC as long ago as 1955 — when currency convertibility seemed for the first time to have come within reach — and had then been signed by the EPU member countries. Thereby those concerned agreed on a procedure which permitted the putting into force of the Agreement at any time when the majority of the members might change over to non-resident convertibility.

Whereas the European Payments Union had received much publicity through the monthly publishing of the clearing "EPU balances", as well as through the constantly recurring arguments about its reform and about further progress towards dollar convertibility (the "hardening of the EPU"), the European Monetary Agreement has hitherto been only in slight outward evidence. Its monthly clearing mechanism has hardly been used, and its credit facilities have been availed of only in some exceptional cases. From this it has often been publicly concluded that the Agreement is of minor importance, while this conclusion has sometimes even been linked with a call for new and more active payment and currency arrangements for Western Europe. This of course overlooked the fact that it is in the nature of convertibility for exchange transactions and the settlement of payments to be so far as possible left to free exchange markets; and it was, therefore, quite logical that the EMA, as the currency agreement for the convertibility system, was given such functions as to come into action only in exceptional cases and emergencies as a kind of stand-by in case of need. The smallness of the actual use made of the EMA since it came into force at the end of 1958 is therefore to be assessed by no means as a disadvantage but rather as a great advantage. On the one hand this reflects the fact that since 1958 the course of the European balances of payments has been unusually favourable; on the other hand it indicates

that the rules which came into effect on the change-over to convertibility have so far worked well.

## I. General Objects of the EMA

The European Monetary Agreement contains the "rules" for payment and credit relationships between the European countries whose currencies have become convertible. It falls into two clearly separated parts. Part I deals with the "European Fund", Part II with the "Multilateral System of Settlements". The objects to which these arrangements are directed are substantially as follows:

(1) *Continuing the close cooperation between European Governments and Central Banks in the field of monetary policy after dissolution of the EPU;*

(2) *Observance of certain rules concerning mutual payment transactions, especially in the important field of exchange rate policy;*

(3) *Preventive measures against any relapse into bilateralism within Europe;*

(4) *Provision of credit assistance for the purpose of overcoming the member countries' temporary balance-of-payments difficulties.*

During the negotiations in 1954 and 1955 for the Agreement this last object had at first stood in the foreground. In particular, it had been thought necessary on the change-over to convertibility to provide a substitute for the EPU's automatic credit facilities by proposing a European Fund, which could provide the member countries with ad hoc short-term currency credits to deal with balance-of-payments difficulties. Only in the further course of the negotiations was it realised that the mere creation of such a Fund would form no adequate basis for the continuing of European cooperation in the monetary sphere, and would afford no sufficient protection against a relapse into bilateralism. In 1954/55, when the pre-1950 bilateral distortions of European trade and payments were still well remembered, and when it seemed necessary to expect somewhat lengthy co-existence of countries with convertible and others with inconvertible currencies, this danger was thought to be greater and more acute than it actually was at the time of change-over to convertibility. It was further deemed necessary, through mutual guaranteeing by Central Banks of payment and of exchange rates, to create that climate of confidence in which the exchange markets could undertake their traditional task of settling pay-

<sup>1)</sup> For details of the transition from EPU to EMA, and of the liquidation of the EPU, see the Monthly Report of the Deutsche Bundesbank for December 1958 (The DM Becomes Freely Convertible) and that for January 1959 (The Liquidation of the European Payments Union).

ments. One important object of the change-over to convertibility was indeed to restore to their original position the exchange markets, the function of which had been greatly reduced in the times of exchange control and international clearing. The need to give the exchange markets a backing through mutual guarantees of payment and of exchange rates as between monetary authorities had been felt even before the second world war, and had led in 1936 to the conclusion of the so-called "Tripartite Agreement", to which however only a small group of countries adhered. The EMA's "Multilateral System of Settlements", which forms Part II of the Agreement, is directed to similar objects, but on a basis that has been both regionally and materially much widened.

At the end of 1959 the Agreement was for the first time examined to see whether the rules drawn up in 1955 correspond to present-day needs and facts. The examination showed that the EMA was functioning according to expectations; no "constructional defects" were found. That is why, apart from partial adjustment of the formula for contributions to the European Fund, this first revision of the Agreement led only to slight amendments, which are taken into account in the following analysis of the Agreement's contents.

## II. Method of Working

### A. The European Fund

According to Article 2 of the EMA the purposes of the European Fund are, first, "to provide the Contracting Parties with credit in order to aid them to withstand temporary overall balance-of-payments difficulties in cases where these difficulties endanger the maintenance of the level of their intra-European liberalisation measures", and secondly "to facilitate the operation of the System of Settlements". By way of contrast with the EPU, the total amount and duration of the credits to be granted by the Fund are firmly limited in the Agreement. The Fund's currency credits are granted to run for periods of up to two years, and that after previous investigation of the economic and monetary situation. In most cases the credits are made dependent on the production of stabilisation programmes by the country seeking them, and are granted in conjunction with directions regarding economic policy, this being expressly laid down in the EMA. The Fund's capital was originally \$ 600 million; since the accession of Spain in July 1959 it has amounted to \$ 607.5 million. To the extent of about \$ 272 million it comprises the EPU's residual capital, which originated from American sources, and was transferred to the European Fund when the EMA came into force. The

remainder of about \$ 336 million comprises the member countries' contributions (see the table below). The contribution of the Federal Republic, like that of France, was originally \$ 42 million; at the beginning of 1960, when the contribution scale was adjusted to the change since 1955 in external trade relationships, both these contributions were raised to \$ 50 million and the contribution of Italy was raised from \$ 15 million to \$ 25 million, while that of the United Kingdom was reduced by \$ 26 million to the level of \$ 60.6 million. The German contribution is financed through a special credit granted by the Bundesbank to the Federal Government (see Article 20, paragraph 1, item 2b of the Law concerning the Deutsche Bundesbank).

*Member Countries' Contributions to the European Fund*

In millions of units of account

United Kingdom	60,575
Federal Republic of Germany	50,000
France	50,000
Belgium	30,000
Netherlands	30,000
Italy	25,000
Switzerland	21,000
Sweden	15,000
Denmark *)	15,000
Norway *)	15,000
Spain *)	7,500
Austria	5,000
Portugal	5,000
Turkey *)	3,000
Greece *)	2,850
Iceland *)	1,000
Total	335,925

\*) Countries the contributions of which have been postponed until those of the other members have been fully paid.

The European Fund uses the contributions only in accordance with its own financing requirements, and does so according to a calling procedure which provides for a certain parallelism between use of the EPU's capital transferred to the European Fund on the one hand and the members' contributions on the other. The Fund's transactions are effected exclusively in gold, and are expressed in a unit of account based on gold (1 unit of account = 0.88867088 grammes of fine gold; this at present corresponds to one U.S. dollar). The rate of interest on the credits granted to members, as well as the other terms of repayment, are fixed by the Council of the OEEC on the proposal of the EMA Board of Management. The European Fund can pay interest, according to its own income, on member countries' contributions paid on its demand.

The European Fund's liquid assets serve at the same time as working capital for the Multilateral Settlement System. To a limited extent they also provide a

guarantee in the event of failures to pay in connection with the multilateral clearing.

In the course of the EMA's overhaul at the beginning of 1960 there was also included in the Agreement a provision drafted in general terms and designed to enable the European Fund in case of need to obtain from member countries in the form of loans additional resources exceeding the contribution capital.

#### B. The Multilateral System of Settlements

The purpose of the System of Settlements is "to facilitate the settlement of transactions in the currencies and between the monetary areas of the Contracting Parties by enabling them to obtain interim finance and the settlement of their claims, regularly, on terms laid down in advance". With a view to the achievement of this purpose the EMA member countries have undertaken three basic duties towards each other, as follows:

(a) to indicate a spread, valid until further notice, outside which they will not allow the value of their currency in terms of a given standard to fluctuate;

(b) on demand to make their currency available (by way of interim financing) to any other member country within certain multilaterally agreed limits;

(c) to meet in U.S. dollars any net debt arising on the monthly settlement in relation to the other member countries, and to accept U.S. dollars in payment of their claims in connection with such monthly settlement.

Technically many provisions of the "Multilateral System of Settlements" resemble those of the former EPU Agreement, for instance in the possibility of multilateral offsetting of balances between Central Banks, and in the technical effecting of the settlement. More important however are the differences from the former EPU system: (1) The balances arising in the EMA multilateral settlement are to be paid 100 per cent in cash, that is in U.S. dollars, and are not as in EPU to be partly financed through the granting or taking of automatic credit facilities. (2) The functions of settling payments and granting credit are not linked with each other, as in the former EPU, but kept strictly separate; credits are granted by the European Fund of the EMA only ad hoc on the basis of a special resolution and no longer, as in EPU, automatically according to the monthly balances. (3) Above all however settlement of balances or of claims in other member countries' currencies is not obligatory in the EMA system, as it was in the former EPU, but apart from some minor exceptions is left to the voluntary

decision of individual Central Banks. (4) In addition the settlement rates, which in EPU were the dollar or gold parity, are in the case of the EMA voluntary monthly settlement so laid down that the realisation of balances in other members' currencies and the settlement of debts to other member countries can normally be effected on more favourable terms through the exchange markets than through use of the EMA multilateral clearing. Thus in EMA, according to the intention of those who drafted the Agreement, the central settlement of currency claims and debts as between the member countries' Central Banks forms the exception, and provision is made for it only in cases of emergency.

#### 1. Guarantee of Payment and of Exchange Rates

The most important function of the EMA Multilateral System is to give every member country's Central Bank the certainty that it can at any time obtain U.S. dollars, *at a rate known in advance*, for its balances in other members' currencies. The guarantee of payment is provided through maintenance of free exchange markets or, where these do not exist, through the possibility of clearing in the EMA Settlement System. The exchange rate guarantee arises from the obligation of every member country to keep fluctua-

*Central Banks' Buying and Selling Rates for U.S. Dollars*

1) U.S. dollars per £.

tions of its currency within determined margins, and for this purpose to fix for a standard currency (as a rule the U.S. dollar) buying and selling rates which limit the extent of its own currency's fluctuation. In addition every member country undertakes in the event of any change in its margin rates in relation to the U.S. dollar to convert the other members' outstanding balances in its own currency at the exchange rate margin previously valid. This provides the framework and the guarantees permitting the exchange markets to develop to full efficiency in an atmosphere of confidence<sup>1)</sup>.

All the countries thus have to declare binding exchange rate margins for their own currency in relation to the selected standard currency. The EMA does not lay down the extent of the spread, but merely expresses in its preamble the intention of all the member countries to keep the spread as moderate and as stable as possible. Members of the International Monetary Fund — and all EMA members other than Switzerland and Portugal are members of it — are of course subject to that Fund's rules; it will be remembered that under Article IV/3 of the IMF Agreement these permit, for spot exchange rates, only a margin of  $\pm 1\%$  in relation to parity. As the preceding table shows, at present the majority of the EMA countries have their spread in relation to the U.S. dollar within about  $\pm 0.75\%$  of the middle rate.

The fixing of the margin rates in relation to the U.S. dollar also determines the maximum spread for quotations of European currencies in relation to each other. That spread is calculated by adding together the two currencies' margins in relation to the dollar (on the cumulative principle of exchange rate arbitrage); in most cases it is therefore roughly  $\pm 1\frac{1}{2}\%$  on either side of parity. Here there is a certain overlapping with the provision in Article IV/3 of the IMF Agreement, according to which in the case of spot transactions the rates for members' currencies are not to diverge from parity by more than 1%. The International Monetary Fund dealt with this problem last year, and expressly approved the consequences resulting from exchange arbitrage in the EMA area, when it laid down by a decision of 24 July 1959 that:

"The Fund does not object to exchange rates which are within 2% of parity for spot exchange transactions between a member's currency and the currencies of other members taking place within the members' territories wherever such rates result from the maintenance of margins of no more than 1% of parity for a convertible, including externally convertible, currency."

<sup>1)</sup> As to this see also the First Annual Report of the Board of Management of the European Monetary Agreement, Paris, May, 1960, Section 4.

## 2. Interim Finance

The obligation to grant short-term credits as between member countries' Central Banks pending each monthly settlement ("interim finance") has been adopted from EPU; in the case of EMA however — unlike EPU — there have been fixed for each country maximum amounts beyond which it may in the course of a month neither incur debts to, nor be drawn upon by, other Central Banks.

*Maximum Amounts for Interim Credits within the EMA  
In millions of \$*

United Kingdom	64.0
France	32.0
Federal Republic of Germany	30.0
Netherlands	22.0
Belgium	20.0
Sweden	16.0
Switzerland	15.0
Italy	13.0
Denmark	12.0
Norway	12.0
Greece	7.5
Spain	7.5
Turkey	7.5
Austria	5.0
Portugal	5.0
Iceland	2.0

Member countries which take credits in other EMA currencies in the course of interim financing are required to repay in U.S. dollars at the monthly EMA settlement all amounts of credit that have not been voluntarily repaid by the end of the month; in this case the creditor country's dollar buying rate is made the basis for the conversion. Since this is the rate least favourable to the debtor, the latter has a strong interest in repurchasing the borrowed currency before the end of the month in the market (at a rate usually more favourable to the debtor) and to repay the credit directly instead of effecting the settlement through the multilateral clearing.

## 3. Payment of Balances in EMA Currencies

Every country can bring balances which have accrued to it in other members' currencies into the monthly EMA settlement. Such balances can accrue to Central Banks in various ways, either through normal banking transactions, or through intervention in the exchange markets, or as the result of "ad hoc" agreements, in which a Central Bank makes amounts of its own currency available to another in the form of swap transactions. Where such currency balances are brought into the settlement the Central Bank bringing them in receives the countervalue in U.S. dollars calculated once again at the margin rate least favourable to itself, namely at the dollar selling rate of the

country whose currency it brings in. This provision is designed to prevent unjustified gains on the rate in the case of market intervention. Every Central Bank can be certain that in the event of any sudden change in the other country's exchange rate, even though it be only a slight alteration of the difference between the margin rates, it can exchange its holdings of the currency in question into dollars at the old margin rate. In the case of any member country's inability to pay, moreover, there comes into play a guarantee by the European Fund, although this is limited to \$ 50 million; such guarantee also applies to claims which arose from bilateral payments agreements and interim financing and were brought into the settlement.

#### 4. Balances arising from Bilateral Payments Agreements

Where member countries still maintain with each other bilateral payment agreements providing for "swings" (this however now applies only to a small number of EMA countries), such agreements have to be reported; in addition, the balances on the respective bilateral accounts *must* be reported at the end of every month and settled by dollar payments. Such currency balances are the only ones for which obligatory monthly settlement is also laid down in EMA. The reason is easy to see. It is that bilateral payments agreements are a relic from the time of international clearings, and are accordingly a blemish where payments take place in conditions of convertibility. It is therefore necessary to keep such payment relationships under control, and to prevent them from leading to a relapse into commercial bilateralism. The compulsory monthly clearance of such accounts through dollar payments, at the rates agreed between the countries concerned in each case, is an effective means of preventing such a relapse. The EMA Board of Management is incidentally making efforts to procure the termination of the few such agreements still in existence.

#### C. The EMA Board of Management

The Board of Management for which the EMA provides resembles the EPU Managing Board, whose successor it is, in that it comprises seven independent experts from the member countries and those experts' deputies. Representatives of the United States Government and the Bank for International Settlements, as well as an observer from the International Monetary Fund, take part in its proceedings. The business activity of the EMA Board of Management mainly consists of supervising the proper functioning of the EMA, and of making proposals to the Council of the OEEC about

such matters as the granting of credits by the European Fund and the terms for such credits. The Board of Management itself takes technical decisions by a majority of votes. The banking transactions of the EMA are handled, as those of the EPU formerly were, by the Bank for International Settlements as the EMA's agent.

Even in the EPU the role of the Managing Board was not confined to technical functions; and this is even more true of the EMA Board of Management since the change-over to convertibility. The Board takes an active part in working out individual countries' stabilisation programmes as a condition for the granting of currency credits by the European Fund. It furthermore currently reviews the monetary situation in all member countries, and deals with all problems of European payments. It thus represents an important forum of monetary cooperation on a broad basis covering the whole of Western Europe.

### III. Business Activity to date

From the above-described character of the EMA as a "stand-by in case of need" it follows that the more favourable its member countries' balances of payments are, and the more smoothly their mutual payments are conducted, the smaller the demands on it and the smaller its business activity must necessarily be. The exceptionally favourable course of European balances of payments since 1958 — a period of definitely "fine weather" in European monetary history — at once explains the relatively small extent of demands both on the European Fund and on the Multilateral Settlement System.

As to *current payments*, these have since the change-over to convertibility been handled by the exchange markets without any appreciable use being made of the Multilateral Settlements. The Central Banks' mutual guarantee of exchange rates has been used only in connection with the widening of the spread for the Swedish crown in November 1959, and on the devaluation of the Icelandic crown in February 1960, when small amounts of currency were brought into the settlement. Up to and including April application has been made for Central Banks' interim credits to a total extent of about \$ 110 million, that is an average of only some \$ 7 million per month; and such credits have in all cases been repaid before the end of the month, so that the bringing of the resulting balances into the multilateral settlement was unnecessary. Approximately a half of all the interim credits granted was drawn in D-marks.

During the same period the balances arising from bilateral payments agreements, which as explained above have to be brought in, amounted to \$ 18 million, representing a monthly average of only a little over \$ 1 million. The obligatory settlement of these balances forestalled any major bilateral claims in respect of swings.

In view of the favourable conditions the European Fund's credit facilities have also hitherto needed to be used only to a relatively slight extent. Since it became operative at the beginning of 1959 the European Fund has granted short-term currency credits to altogether four countries, namely Greece, Turkey, Spain and Iceland. Greece has since renounced, without having used it, the credit line so granted. The credit to Turkey represents renewal of a so-called EPU rallonge credit, which had been granted to Turkey as part of the international assistance scheme in the summer of 1958; the residue of \$ 21.5 million made available by the European Fund has in the meanwhile been fully used by Turkey. In August 1959, in connection with Spain's accession to the OEEC and the stabilisation programme agreed on that occasion, there was granted to Spain a credit line amounting altogether to \$ 100 million, of which \$ 75 million could be used immediately and the remaining \$ 25 million as from February 1960; of these amounts, because of the rapid improvement in its exchange position, Spain has so far needed to draw only \$ 24 million. Finally in February 1960 Iceland was granted in connection with a stabilisation scheme a credit line of \$ 12 million, of which \$ 7 million can be used immediately and a further \$ 5 million under a fresh decision to be taken after a review of the country's situation; of these amounts \$ 5 million had been actually used up to the end of April 1960. Thus in the first 16 months of its existence the European Fund has opened credit lines totalling about \$ 150 million, of which some \$ 50 million had been effectively drawn by the end of April 1960. Of the member countries' contributions there have so far been called \$ 38 million, of which roughly \$ 7 million came from the Federal Republic of Germany.

The credits to Turkey, Spain and Iceland are instructive examples of international joint assistance to member countries which have fallen into difficulties. The balance-of-payments credit to Turkey was granted as long ago as August 1958, under the aegis of the EPU, as a contribution towards such joint assistance; this came not only from the EPU (and later from the European Fund) but also included bilateral credits

granted by individual OEEC members, while the International Monetary Fund and U.S. Government institutions also had a hand in it. In connection with the current review of Turkish economic conditions in accordance with the stabilisation programme agreed in 1958, the EMA Board of Management has to do a large part of the preliminary work for the OEEC Council. The currency credits granted to Spain and Iceland by the European Fund of the EMA were also given within the framework of joint international schemes. In the first case, apart from the European Fund, the International Monetary Fund took part with a \$ 75 million credit while American credits were also granted; in the case of Iceland the International Monetary Fund took part with a credit of \$ 8.4 million. In both cases a preceding inflation process had produced disequilibrium in the balance of payments. The countries were obliged to resort to discriminatory trade and exchange restrictions, which formed a disturbing element in European trade relationships. Stabilisation of their internal and external economic position could be achieved only by drastic monetary measures, backed by international financial aid.

The EMA Board of Management, in close cooperation with the executive authorities of the International Monetary Fund, has taken part in preparing and reviewing the stabilisation programmes worked out by both countries. As is shown by experience since the war, the technical advice and indeed the authority of international monetary experts are of inestimable importance in the preparing and executing of difficult stabilisation programmes. The existence of an experienced body of international monetary experts accustomed to working with each other, in the shape of the EMA Board of Management, is therefore calculated to strengthen confidence that the European payments system which is working smoothly will be able to cope with any troubles that may suddenly arise.

The fact that the EMA is generally regarded as a useful and even indispensable instrument of monetary cooperation in Europe was shown in connection with the recent review of the Organisation for European Economic Cooperation, and of its functions and institutions, in connection with the plan for transforming it into an "Organisation for Economic Cooperation and Development"; the "four wise men's" recently published report, which contains proposals for such reform of the OEEC, recommends that the EMA be retained unchanged within the new organisational framework.

# Forms, and Ownership Distribution, of Post-Currency-Reform Public Indebtedness in the Federal Republic

The public authorities' post-currency-reform indebtedness<sup>1)</sup>, which in the first nine years, until the 1956/57 financial year ended on 31 March 1957, had grown relatively slowly to a total of DM 14.7 billion, or by an annual average of about DM 1.7 billion, increased much faster in the three following years. At about DM 27.4 billion at the end of March 1960 it was almost twice as great as three years before. Of that amount nearly DM 10 billion related to the Federal Railways and Federal Postal Administration, whose debts by reason of the forms they usually take and of the legal provisions must be counted as part of the public and not private indebtedness. At the same date the public budgets, comprising the Federal Government, the Equalisation of Burdens Fund, the Länder and the local authorities, were indebted in the credit markets to the extent of some DM 17½ billion. More than half of this amount was owed by local authorities, a further quarter by Länder and the remaining quarter by the Federal Government and Equalisation of Burdens Fund together. The striking differences between the levels of the various authorities' indebtedness are mainly due to the fact that from 1952 until 1956 the Federal Government was in a highly favoured cash position by comparison with the other budgets, especially the local authorities. By now however the picture has changed; whereas in the financial years from 1953/54 to 1958/59 the Federal Government had needed no borrowed funds, in 1959/60 it borrowed over DM 2.4 billion, this being roughly 60 per cent of the total amount by which the indebtedness of all public authorities rose in that year.

The following study is designed to survey the forms in which the public authorities and the two major Federal enterprises incurred debt; it further seeks to investigate the distribution of the total amount among the most important creditors. The movement and position of the individual authorities' and enterprises' indebtedness, of which an account is currently given in our Monthly Reports, will in this connection be described only in so far as that is necessary for the purpose of elucidating the nature of the debts and their distribution.

## Forms of Public Indebtedness

The public authorities and the two major Federal enterprises can in principle raise their loans in the same form as the private sector. They can issue long-term bonds, and can borrow directly from banks as well as from public and private institutional investors. Unlike private borrowers they also have direct access, through the issue of Treasury bills and non-interest-bearing Treasury bonds, to the money market and in limited degree to the Central Bank.

## Borrowing Limits and Money-Market Indebtedness

It is true that these forms of borrowing are confined to the central authorities (including the Länder) as well as to the Federal Railways and Postal Administration, while the local authorities, which in the past years were the most important public borrowers, are excluded from borrowing at the Bundesbank and as a rule cannot issue money-market paper. But even in the case of the other public authorities the extent to which they can have recourse to the Bundesbank — directly through taking book credits and potentially through the issue of Treasury bills that are rediscountable at any time — is limited by the provisions of the Bundesbank Law in regard to both the amount and the purpose (only short-term cash advances being designed to cover temporary needs); and, apart from that, the Bundesbank is only entitled but not

<sup>1)</sup> This does not include the liabilities in respect of equalisation and covering claims, the commutation debts under the General War Consequences Law, or the external debts; these items together amount to about DM 31 billion. The Bundesbank's special credits granted to the Federal Government to permit fulfilment of the latter's obligations towards international organisations have been excluded from the post-currency-reform indebtedness because, from the Federal Government's point of view, these credits merely represent mutually offsetting items. Nor have the Social Insurance Institutions' debts, which are insignificant, been included. So as to avoid duplications in the total, the mutual debts of public authorities have so far as possible been eliminated.

<sup>1)</sup> Excluding special credits for payments to international institutions. — <sup>2)</sup> For delimitation see footnote <sup>1)</sup> on page 18. — <sup>3)</sup> Treasury bills, non-interest-bearing Treasury bonds, tax credit certificates and trade bills of the Federal Railways (cf. Table 2). — <sup>4)</sup> Excluding bonds in the issuers' own portfolios. — <sup>5)</sup> Chiefly loans of private institutional investors and, in the case of the Federal Railways, also of Länder, local authorities and social insurance funds, even where security has been provided by surrendering instruments of indebtedness. — <sup>6)</sup> Not including Saarland figures.

obliged to grant such credit. In point of fact the extent to which the authorities in question have in recent years drawn on their credit lines, as limited by the Bundesbank Law, has on the whole remained comparatively small. Only the Federal Railways have at times taken the whole DM 400 million which are the legally permitted maximum, doing so through the issue of Treasury bills. As against this the Federal Postal Administration has never yet applied for a cash advance at the Bundesbank. Since the promulgation of the Bundesbank Law the Equalisation of Burdens Fund has only once (at the end of 1958) asked for cash advances there and received them at short term. So far the Länder's borrowing under the ceilings permitted to them (totalling DM 1,158 million with the Saarland included) has mostly kept within narrow limits. The Federal Government, however, did at times draw somewhat heavily on cash advances at the Bundesbank during the 1959/60 financial year now ended, as well as in 1950 and 1951. The largest temporary drawing on all credit lines, which for the borrowers mentioned total nearly DM 5 billion apart from the Federal Government's special limit for payments to international organisations, was reached in August and October last year at nearly DM 1 billion. By the end of the 1959/60 financial year the amount taken had dropped to DM 352 million, of which DM 149 million was in the form of book credits granted to the Federal Government and DM 203 million in that of

#### Treasury bills of the Federal Government and Federal Railways.

At this amount the circulation of Treasury bills was smaller than in almost all previous years. It was down to roughly a sixth of the DM 1,317 million outstanding on 31 March 1951. At the same time, however, the circulation of non-interest-bearing Treasury bonds rose considerably. These of course cannot be rediscounted at the Bundesbank, but can only be used as security for advances to the extent that the remaining period to maturity does not exceed one year. In addition the greater part of them, like that of the Treasury bills, is included in the Bundesbank's open-market transactions: that is to say, the Bundesbank buys and sells them in the money market at rates fixed by itself. The circulation amounted on 31 March this year to DM 1,497 million against DM 266 million on the corresponding date in 1951.

As can be seen from Table 2, the public authorities' indebtedness in the form of money-market paper exceeds the amount of the securities included in the Bundesbank's open-market transactions. Mention should here be made of the non-interest-bearing Treasury bonds issued by the Länder (to the extent of DM 158 million on 31 March this year), which are only eligible as security for advances if their remaining life does not exceed one year. Other securities not included in open-market operations are the tax credit certificates which have been issued by the Land

of Bavaria since 1950 and of which DM 262 million were in circulation on 31 March 1960, and the DM 392 million of "earmarked" non-interest-bearing Treasury bonds issued by the Federal Railways. The bonds last mentioned were deposited as security for direct loans obtained from banks and private lenders, and are likely to remain throughout their life in the lenders' hands. Finally there are the Federal Railways' trade bills, which in earlier years were often issued to finance coal purchases, and which credit institutions can put into the Bundesbank in the course of normal rediscount business. If the securities included in the Bundesbank's open-market transactions are added to the other money-market paper of public authorities and the two Federal enterprises, the total for the end

The relatively small proportion of the public authorities' money-market indebtedness to their total debt, and the even appreciably smaller amount of short-term book credits — apart from the DM 149 million granted by the Bundesbank there were outstanding on 31 March this year DM 418 million of short-term book credits granted by other banks — indicate that during recent years, unlike the period immediately after the currency reform, the public authorities' borrowing has not in practice resulted from acute strains on their cash position. On the contrary, their need for credit was almost entirely due to their investment activity, for which — in addition to their own much larger resources — they at times required borrowed funds on a substantial scale. Thanks to the

<sup>1)</sup> Excluding bonds in the issuers' own portfolios.

from April 1959 to March 1960, was about DM 1.8 billion. The total circulation of public authorities' fixed-interest securities, which at the end of March 1957 or roughly nine years after the currency reform had amounted to only about DM 2½ billion, rose in the following three years (to the end of March 1960) to around DM 6¾ billion. Since the beginning of 1959 public issuers have for the first time offered a substantial amount of medium-term securities known as notes (Kassenobligationen) and running for three and four years, while the interest-bearing Treasury bonds which had been issued in the first years after the currency reform — also mostly at medium term — have by now become almost insignificant. The circulation of long-term bonds rose in the last financial year by only about DM 1 billion, against nearly DM 2 billion in the previous year, when however the market's capacity for absorbing long-term issues had been especially great.

Of the total amount of fixed-interest securities in circulation, public securities (including the bonds and medium-term notes issued by the Equalisation of Burdens Bank for purposes of the Equalisation of Burdens Fund) accounted at the end of March 1960 for 18 per cent. As between individual years the proportion of securities placed by public authorities to the total net placings differed greatly. Thus at 39 and 30 per cent respectively in the 1952/53 and 1953/54

financial years it had been relatively high, mainly because public issues had for a time been greatly favoured by the Capital Market Encouragement Law that came into force in December 1952. Again in the last two financial years 1958/59 and 1959/60, when the capital market was very much more productive than in preceding years, at 26 and 25 per cent respectively the proportion of public authorities' net issues was above the average for the period under report. But immediately after the currency conversion the public issues had also been relatively important, largely because of the DM 500 million Federal Railways loan issued in 1949, and had greatly strained the market, which was at the time still very narrow. On the other hand the amounts taken from the security market by public authorities' issues in the 1954/55 and 1957/58 financial years were relatively small; at times indeed, as in the 1951/52 and 1956/57 financial years, the net circulation of public bonds actually declined as the result of scheduled repayments and premature redemption.

Direct public borrowing in the security market is largely confined to the central authorities together with the Federal Railways and Postal Administration. Of the roughly DM 6¾ billion total of public authorities' fixed-interest securities circulating at the end of March 1960 some DM 2½ billion were those of the Federal Railways and Postal Administration, and a further DM 1¾ billion those of Länder. At something over DM 1 billion the proportion of Equalisation of Burdens Fund securities was relatively high; this Fund

does not however resort directly to the market, but makes use of the Equalisation of Burdens Bank, which issues bonds and medium-term notes in its own name and passes the proceeds to the Fund. On the other hand the Federal Government, after having at the end of 1957 repaid its DM 500 million loan issued five years earlier, did not re-enter the security market until last year; in November it issued a loan for DM 300 million, which was followed in January 1960 by another loan for DM 500 million. In addition the Federal Government put about DM 350 million of medium-term notes into circulation, so that at the end of March 1960 the fixed-interest bonds issued by the Federal Government totalled DM 1,146 million, this being nearly half its total market indebtedness. In the case of the local authorities, among which only the large cities are capable of issuing securities, at DM 346 million or roughly 4 per cent of the total indebtedness the bond circulation remained within narrow limits.

#### *Direct Borrowing*

A component of decisive importance within the total indebtedness is the amounts which the public authorities here considered borrowed directly from credit institutions. Such borrowings amounted on 31 March 1960 to no less than DM 13.8 billion, or more than half the total post-currency-reform indebtedness. The greater part — in fact about DM 13.4 billion<sup>1)</sup>, or 97 per cent — represented medium and long-term borrowings, whereas at only DM 418 million the banks' short-term lendings to such authorities were as already mentioned extremely small. This form of borrowing, which is roughly twice as large as the amount of public authorities' fixed-interest securities in circulation, in great part involves monies which the credit institutions have obtained on the security market by issuing their own bonds (mainly communal bonds) and passed to public borrowers. Especially important among these latter are the local authorities, which at the end of March 1960 owed DM 7½ billion to credit institutions. A further DM 3.8 billion were taken by the Federal Railways and Postal Administration; the greater part of the rest — namely DM 1.9 billion — went to the Länder. In the case of the Federal Government and Equalisation of Burdens Fund, on the other hand, direct debts to banks are hardly significant, if

the Fund's previously mentioned liabilities to the Equalisation of Burdens Bank are disregarded. It is true that last year the Federal Government did obtain from the Reconstruction Loan Corporation a direct credit of DM 325 million in connection with the economic reincorporation of the Saarland; but that was definitely a special transaction.

The individual groups of banks share to greatly differing extents in the granting of credit to public authorities. More than half the total credit so granted comes from the savings banks and their central institutions, which have in particular met the local authorities' need for funds for longer-term financing purposes. Lending to Länder has also been of some importance in the case more particularly of the central giro institutions, some of which operate as "Landesbanken". Secondly there are the private and public

*Table 4: Credit Granted to Public Authorities  
by Important Banking Groups as at 31 March 1960*

Banking groups	DM million	per cent
(1) Central giro institutions	4,139.7	26.9
(2) Savings banks	3,884.7	25.3
Savings institutions, total (1 + 2)	8,024.4	52.2
(3) Private and public mortgage banks	3,232.4	21.0
(4) Credit institutions with special functions	1,514.6	9.8
(5) Postal Cheque and Postal Savings Bank offices	1,423.6	9.3
(6) State, regional and local banks	788.0	5.1
(7) Other credit institutions	394.0	2.6
All banking groups (1 to 7)	15,377.0 <sup>1)</sup>	100.0

<sup>1)</sup> By contrast with the amount mentioned in Table 1 (page 15) this figure also contains those credits granted to local authorities out of public budget resources, for which the banks have assumed only joint commitment; the figures deviate from the data given in the banking statistics in so far as loans of the Equalisation of Burdens Bank to the Equalisation of Burdens Fund and lendings to "other" public authorities (communal enterprises, churches, etc.) have been eliminated; cf. footnote 1) on this page.

mortgage banks, which have granted credit on a considerable scale both to local authorities and to Länder. As to the other banking groups, mention may be made of the credit institutions with special functions, and the Postal Cheque and Postal Savings Bank offices; these are very important for the granting of credit to the Federal Railways and the Federal Postal Administration, credit being granted to the former by the Deutsche Verkehrs-Kredit-Bank and to the latter by the postal institutions mentioned. In the case of the remaining groups of banks the total of credit granted to public authorities is small, both in absolute amount and in relation to the total credits outstanding.

Besides borrowing at banks the public authorities and the two Federal enterprises have also obtained direct loans from private and public lenders. In the present study the loans granted by public authorities

<sup>1)</sup> The reason why the previously mentioned amount of medium and long-term direct borrowings falls short by DM 4.1 billion of the amounts shown in the monthly banking statistics is that here no account is taken of the credit granted to "other public authorities" (such as enterprises of the Länder and local authorities, churches, and so forth), and furthermore that — as already indicated — the monies which the Equalisation of Burdens Bank obtains as proceeds of its issues and passes on to the Equalisation of Burdens Fund are regarded as security market indebtedness, while finally the bank loans granted to local authorities out of public monies have been eliminated.

have been largely eliminated so as not to inflate the total through duplications. Only in the case of the Federal Railways, which have procured funds for financing purposes on a considerable scale from the Länder, the local authorities and the Social Insurance Institutions, was this not possible. Among the private lenders, who account for by far the greater part of such direct loans (in fact for an estimated DM 3 1/4 billion out of the total of about DM 4 1/4 billion), special importance attaches to the insurance companies under private and public law, which have granted to public authorities roughly a quarter of their total loans against borrowers' notes.

#### Ownership Distribution of Public Indebtedness

Comprehensive data about the holders of public debt are available only for the banking system. The amounts placed with non-banks, that is to say resident business enterprises and individuals, non-resident lenders (including foreign banks) and — so far as bonds are concerned — also German public authorities, can be ascertained only as the residual difference between the total and the part placed in the banking system. In the case of money-market paper and fixed-interest securities, which in the banking statistics are shown not at their nominal but at their balance-sheet values (these being as a rule doubtless somewhat lower), the share of the banking system in the amounts placed is probably put a little too low and that of the non-banks a little too high.

#### The Banking System's Share

As Table 5 shows, in all years since the currency reform the banks have been the public authorities' most important creditors. At the end of March this year the amount of credit which they granted to public budgets and to the two major Federal enterprises in the form of direct lendings, and through the taking of money-market paper and fixed-interest securities, was no less than DM 19.6 billion, or some 71 per cent of the total market indebtedness. The greater part of this, namely DM 13.8 billion, was the direct lendings. There was also a holding of money-market paper amounting to DM 1,860 million, or roughly three quarters of the total circulation of such paper. In addition the DM 6.75 billion of fixed-interest securities circulating on that date had been taken for the most part by banks (the medium-term notes to the extent of 88 and the bonds and interest-bearing Treasury bonds to that of 54 per cent), although for the reason previously stated the banks' holdings at DM 3,965 million may have been shown rather too low.

<sup>1)</sup> Book credits and Bundesbank holdings of money-market paper and bonded loans, as well as cash assistance granted by the Equalisation of Burden Fund to the Federal Government (March 1960) out of the Fund's credit balances maintained at the Bundesbank. — <sup>2)</sup> Including holdings of the Equalisation of Burden Fund's bonded loans and medium-term notes (amounts estimated); this explains differences from the data given in Table III A 2 of the Statistical Section. — <sup>3)</sup> Public and private lenders (ascertained as difference).

Apart from brief interruptions the credit institutions' share in the public indebtedness has risen steadily since 1950. Whereas on 31 March 1950 it had been only about 44 per cent, by the same date in 1953 it was already around 60 per cent; and from then onwards, with only slight fluctuations, it rose to more than 71 per cent on 31 March this year. To a certain extent the increase of the credit institutions' share in the total granting of credit to public authorities was accompanied by a decrease in that of the Bundesbank. On 31 March 1951 the credit granted by the latter to public authorities had amounted to nearly DM 1.2 billion, or 27 per cent of the total indebtedness, of which amount book credits represented DM 430 million, holdings of money-market paper DM 409 million and publicly issued securities DM 335 million. Two years later, on 31 March 1953, the corresponding amount was only DM 72 million or 1 per cent of the total outstanding. After a slight renewed rise in the subsequent years such credits were practically paid off by 31 March 1959. In the course of the last financial year they for the first time rose again considerably,

because not only did the Federal Government for a time take book credits on a considerable scale, but in addition the Bundesbank temporarily took larger amounts of non-interest-bearing Treasury bonds of the Federal Railways, and in some cases also of the Federal Postal Administration, into its holding. At the end of March 1960 however only a relatively small amount of such credit was outstanding. Apart from the DM 149 million of short-term book credit granted to the Federal Government, as already mentioned in another connection, the Bundesbank on that date had in its holding only DM 25 million of non-interest-bearing Treasury bonds of the Federal Postal Administration.

#### *Placing at Non-Banks*

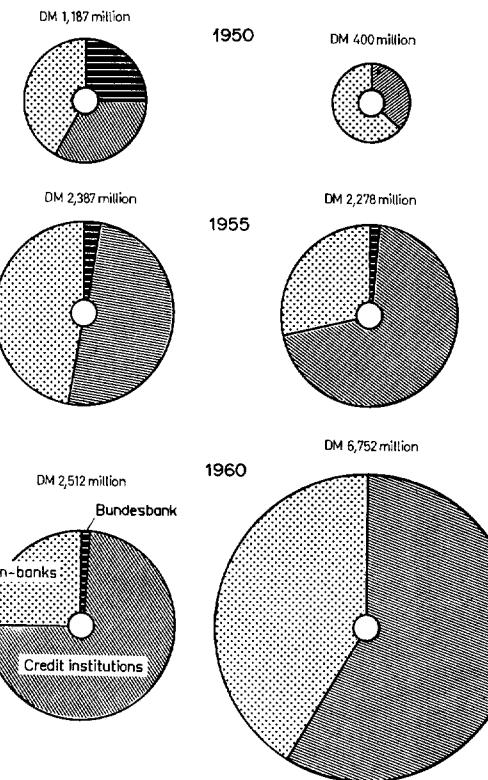

In part the growth from year to year in the credit institutions' importance as lenders to public authorities was also due to the fact that the proportion of debt placed outside the banking system became smaller. In absolute terms the amount so placed rose very greatly from about DM 1.1 billion on 31 March 1950 to some DM 7.6 billion on 31 March 1960. But the proportion to the total indebtedness declined from 39 per cent at the end of the 1952/53 financial year to not quite 28 per cent at the end of the last financial year.

Although accurate apportionment of this amount between business enterprises and individuals on the one hand and public authorities on the other is not possible, it is clear that by far the greater part came from private lenders. This applies at all events to the direct borrowings, which at DM  $4\frac{1}{4}$  billion form the most important item. As already shown, of this amount some DM  $3\frac{1}{4}$  billion was provided by private lenders. To the extent of not quite DM 0.7 billion the remainder was in the form of money-market paper, and to that of almost DM 2.8 billion in fixed-interest securities. As regards in the first place the money-market paper, it would seem to have been mainly taken by public authorities and foreign investors, whereas the amount taken by business enterprises and individuals in the Federal Republic is insignificant. This is due to the provisions of the Agreement on Creditor Interest Rates, which permit resale of Treasury bills and non-interest-bearing Treasury bonds by credit institutions to non-banks only at terms which offer practically no attraction to these latter. Sales to public authorities, which are regularly effected by the Bundesbank at the same terms as sales to credit institutions, are also possible only in limited amount because under the terms of Article 17 of the Bundesbank Law important public authorities — the Federal Government, the Equalisa-

#### OWNERSHIP DISTRIBUTION OF MONEY-MARKET PAPER AND BONDED LOANS ISSUED BY PUBLIC AUTHORITIES

<sup>1)</sup> Including interest-bearing Treasury bonds and medium-term notes.

BBK

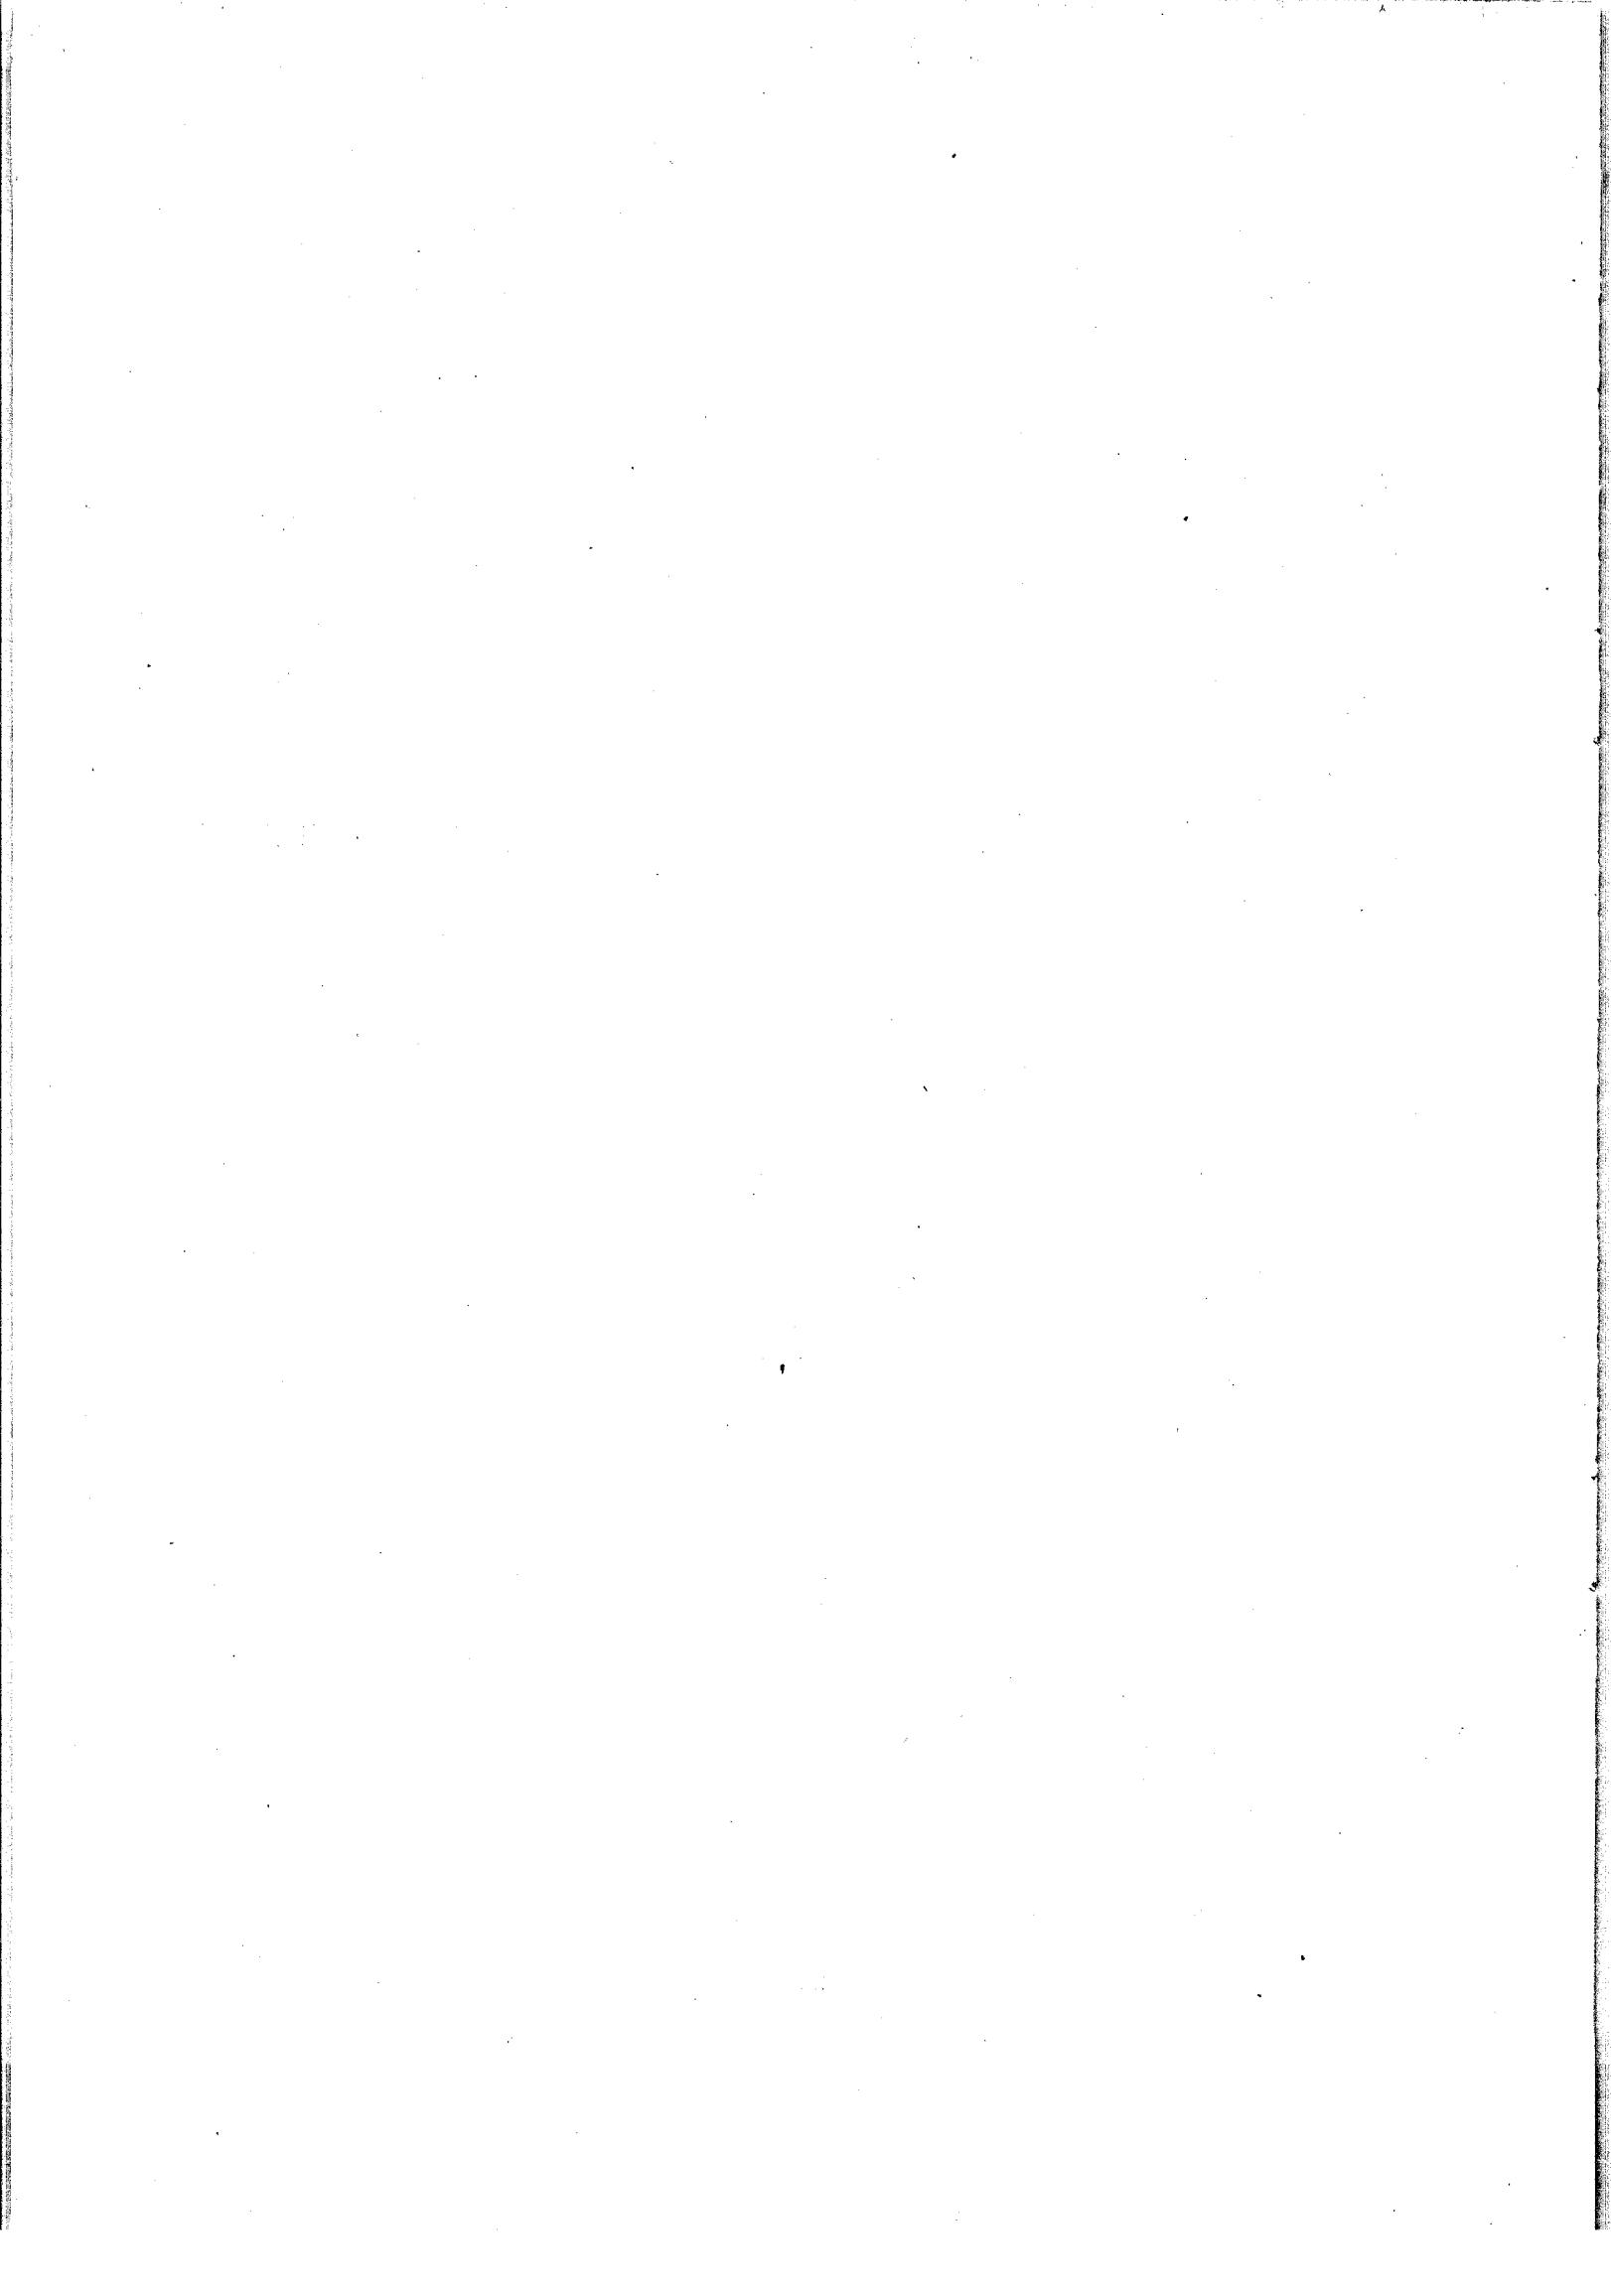

tion of Burdens Fund and the Länder — are required to place their liquid monies on giro account at the Bundesbank, and they do not buy money-market paper unless the Bundesbank permits employment elsewhere. Still, other public agencies such as the Social Insurance Institutions and the Unemployment Insurance Fund can acquire money-market paper. In fact on 31 March 1960 such agencies had purchased roughly DM 270 million of money-market paper through the Bundesbank. No precise figures are available regarding the extent to which foreigners acquired German money-market paper. All that is known is that foreign Central Banks purchased certain amounts of money-market paper of German public authorities, and that other foreign takers too acquired some — though not very large — amounts of such money-market paper.

On the other hand the non-banks' share in the amount of public authorities' fixed-interest securities placed was much more important. After deduction of bank holdings from the total circulation there remained on 31 March this year a total of nearly DM 2.8 billion. Even with allowance for the difference in

valuation of bank holdings it would seem that at least DM  $2\frac{1}{2}$  billion nominal were placed at non-banks. Of primary importance among the buyers were resident individuals and business enterprises. According to our statistics of initial placings, in the last financial year, for instance, such takers accounted for about 23 per cent of the gross placings. While no precise figures for the holdings of such takers are available, one would probably not be far wrong in assuming that, out of the altogether roughly 40 per cent placed with non-banks, business enterprises and individuals accounted for at least half, that is for some DM  $1\frac{1}{4}$  to  $1\frac{1}{2}$  billion. Among them the insurance enterprises (life, indemnity, accident and reinsurance companies and pension funds) are especially important with a total holding of public securities amounting to around half a billion DM. Public authorities' purchases were on the other hand much more modest. On 31 December 1959 the most important investors, namely the Workers' and Employees' Pension Funds and the Unemployment In-

surance Fund, showed among their investments only DM 415 million of public authorities' bonds<sup>1)</sup>. Since the other Social Insurance Institutions' investments are only small, while the territorial authorities hardly take fixed-interest securities (apart from mortgage bonds which they acquired in connection with the encouragement of housing), the public authorities' share in the amount of public securities placed would seem to be not much greater than the amount previously stated for the Pension and Unemployment Insurance Funds. Finally mention must be made of foreign investors' purchases. In their case, like that of resident business enterprises and individuals, no figures for the amounts held are available. Evidently however the interest shown by foreigners in German public bonds has been growing just lately. Whereas foreigners' net purchases had amounted in 1959 to only about DM 60 million, they rose to DM 120 million in the first quarter of 1960.

<sup>1)</sup> This excludes the claims on the Federal Debt Register which the social insurance institutions had to take under special laws in 1954 and 1957.

<sup>1)</sup> In May 1959 the above table was revised in connection with a new delimitation of foreign assets and liabilities: Whereas until then the banks' claims on and liabilities possible) separated from the latter and attributed to the foreign assets or liabilities of the banking system (including Bundesbank). Thus the overall items "foreign assets" exception however of DM notes and coin as well as bank bonds held by foreigners, the amount of which holdings cannot be ascertained. Apart from that, the individual processing, for the purpose of the "monetary analysis", of the figures recorded in the banking statistics and cannot, therefore, be immediately derived from the figures deposited of Saarland non-banks with Deutsche Bundesbank. — <sup>1)</sup> Without the banks' holdings of "mobilisation paper" (cf. footnote <sup>7)</sup>), the taking over of which paper by medium-term notes, but excluding the banks' holdings of bank bonds which as part of inter-bank indebtedness do not represent any immediate granting of credit to discount credits and advances against securities. — <sup>2)</sup> Excluding foreign notes and coin as well as foreign bills and cheques bought within

## Monetary Survey

Institutions including the Deutsche Bundesbank \*)<sup>x)</sup>

of DM

The figures in this table were revised in connection with a new delimitation of "foreign assets" and "foreign liabilities"; hence they are no longer immediately comparable with the figures published prior to May 1959. Details will be found in footnote \*) to this table.

## Assets

towards foreign non-banks were almost without exception recorded together with claims on and liabilities towards German non-bank customers, they are now (as far as and "foreign liabilities" now comprise, in addition to claims on and liabilities towards foreign banks, also claims on and liabilities towards foreign non-banks, with the items of the above table accordingly contain only the claims on and liabilities towards German non-bank customers. Thus they already represent a further stage in the given under II and III in the Statistical Section of the Monthly Reports. — \*) As from July 1959 including DM notes and coins circulating in the Saarland as well as the banks does not involve any additional granting of credit to non-bank customers. Until January 1958 bank holdings of mobilisation paper were estimated. — \*) Including non-bank customers: bank holdings of bank bonds were estimated until the beginning of 1956. — \*) Until the beginning of 1956 estimated. — \*) Including occasional movement of public funds in equalisation claims was only possible until the Bundesbank Law came into force. — \*) Federal Treasury bills and non-interest-bearing Treasury Bundesbank Law; until January 1958 bank holdings were estimated. — \*) Including counter-items to coin circulation. — \*) Including DM notes and coins abroad. — liabilities". — \*) Netted against own and other banks' bonds in the credit institutions' portfolios (cf. footnote \*), but including paper held by foreigners (cf. footnote \*). — \*) Including counterpart funds kept with Bundesbank (cf. Table II 4) and the credit precipitation account, unpaid capital, and own shares held by credit institutions. — \*) Including counterpart funds kept with Bundesbank (cf. Table II 4) and the credit precipitation account, unpaid capital, and own shares held by credit institutions. — \*) Containing decrease due to elimination of loans on a trust basis (to business and private customers: DM 518 million; to public authorities: DM 42 million; loans lion due to statistical reasons. — \*) Increase of about DM 270 million due to statistical reasons. — \*) Decrease of DM 175 million due to elimination of loans on a lion due to statistical reasons. — \*) Increase of DM 347 million due to statistical reasons. — \*) Increase of DM 280 million due to statistical reasons. — \*) and decrease of DM 119

been shown separately, have been combined in the "Net position of German non-banks in relation to Deutsche Bundesbank". It was necessary to net the two items against from the other payments of the authorities concerned, were made at the debit of Central Bank balances or by using Bundesbank cash advances. As to the special treatment as shown in the table are no longer ascertained on the basis of end-of-month positions of the individual items, as was hitherto the case, but on the basis of averages often subject to fortuitous fluctuations. — <sup>o)</sup> For longer periods: averages of the four bank-return dates of the last month of the quarter or year. — <sup>1)</sup> The changes in identical with the changes in the corresponding items of the Return of the Deutsche Bundesbank. — <sup>2)</sup> Net total of credit balances maintained and cash advances taken until July 1957 including credit balances employed in equalisation claims. — <sup>3)</sup> As from May 1958 including the minimum reserve balances kept by the Federal Postal Administration. — <sup>4)</sup> Up to end-June 1958 including deposits items which cannot be allocated explicitly to any of the aforementioned factors. — <sup>5)</sup> Treasury bills and non-interest-bearing Treasury bonds, Storage Agency bills, prime Cheque and Postal Savings Bank offices; cf. footnote <sup>4)</sup>. — <sup>6)</sup> As from July 1959 including the Saarland; changes due to the integration of the Saarland were eliminated.

## I. Overall Monetary Survey

3. Note and Coin Circulation and Bank Deposits \*)  
in millions of DM

End of month	Note and coin circula- tion, excl. credit insti- tutions' cash holdings *) *)	Deposits of German non-banks												Deposits of foreign depositors *)			
		Sight deposits of German non-banks															
		German business and private customers			German public authorities			Deposits of former occupy- ing powers' agencies *)			Time deposits of German non-banks *)

\*) Prior to 1 May 1954, partly different regulations applied to the Berlin credit institutions. The Saarland credit institutions are subject to the minimum reserve requirement as from 1 August 1959. — \*) "Bank places" are places at which there is an office or branch of the Deutsche Bundesbank.

1) Grading by reserve classes:  
from 1 May 1952 to 31 July 1959

Reserve class 1	for credit institutions	DM 100 million and over	Reserve class 1	for credit institutions	DM 300 million and over
" 2	whose liabilities	DM 50 to under DM 100 million	" 2	whose liabilities	DM 30 to under DM 300 million
" 3	(other than savings)	DM 10	" 3	(including savings)	DM 3 to under DM 30
" 4	deposits) subject to the	DM 5	" 4	deposits) subject to the	under DM 3 million
" 5	reserve requirement	DM 1	" 5	reserve requirement	amount to
" 6	amounted to	under DM 1 million			

The reserve class in which any credit institution is to be placed is determined by the amount of its liabilities subject to the reserve requirement in the previous month.

2) These ratios are only applicable to the increase as compared with 30 November 1959 in those liabilities to non-residents which are subject to the minimum reserve requirement.

### b) Credit Institutions' Reserve Balances, by Banking Groups and Reserve Classes \*) \*)

Amounts in millions of DM

Month	Total	Banking groups								Reserve classes									
		of which:				Central institutions of agricultural credit cooperatives, and agricultural credit cooperatives	Central institutions of industrial credit cooperatives, subject to the reserve requirement	All other credit institutions subject to the reserve requirement	(DM 100 million to under 100 million)	(DM 50 to under 50 million)	(DM 10 to under 10 million)	(DM 5 to under 5 million)	(DM 1 to under 1 million)	(under DM 1 million)					
		Commercial banks	Big banks <sup>1)</sup>	State, regional and local banks	Private bankers									as from 1 August 1959

<sup>1)</sup>) Short-term lendings: less than six months; medium-term lendings: six months to less than four years; long-term lendings: four years and over. — The classification of lendings is statistics cover about 98 per cent of the aggregate balance-sheet total of all credit institutions in the area of the Federal Republic including the Saarland and Berlin (West). Cf. "Stations, or to the establishment of new institutions. In the case of larger institutions, or of a considerable number of institutions, alterations are explained by separate notes. — <sup>2)</sup>) Partial trust basis". — <sup>3)</sup>) Increase due to extension to all instalment credit institutions of the obligation to render returns (September 1950). Until August 1950 six instalment credit institutions of the agricultural credit cooperatives' obligation to render returns. Whereas up to end-December 1954 those agricultural credit cooperatives were required to render returns which in 1953 was at least DM 500,000. — <sup>4)</sup>) Increase partly due to conversion of "administered loans" (about DM 438 million of Land building loans) into bank lendings (September 1954). — DM 518 million; long-term lendings to public authorities about DM 42 million; long-term lendings to credit institutions about DM 7 million). — <sup>10)</sup>) Decrease owing to re-centralisation sheet total of roughly DM 4 million. — <sup>11)</sup>) Decrease owing to re-centralisation of Commerzbank A.G. (November 1958). — <sup>12)</sup>) Decrease due to merging of the Gemeinwirtschaftsbanken in Bank für Gemeinwirtschaft A.G., Frankfurt/M. (December 1958). — <sup>13)</sup>) Increase of DM 120 million due to statistical reasons. — <sup>14)</sup>) Increase of about DM 347 million. The rows of figures were linked together by showing for December 1959, firstly, the figures excluding the Saarland and, secondly, the figures including the Saarland — where possible of "Commercial Banks". — <sup>15)</sup>) Provisional.

<sup>1)</sup> Including the debits to accounts of expelled persons and "old" savers, which debits cannot be ascertained as a separate item. — <sup>2)</sup> The net amount of genuine new savings in 1953 and 1954 cannot be accurately ascertained owing to the conversion and disbursement of credit balances of expelled persons and "old" savers; cf. footnote 1). — <sup>3)</sup> Amounts credited as compensation for "old" savers' balances and for expelled persons' savings balances: 1953, DM 664.0 million; 1954, DM 1,200.7 million; 1955, DM 186.5 million; in the following years only small amounts have come from this source. — <sup>4)</sup> Specialised commercial banks, which are included in the group "Commercial Banks", are not specified in this table because of their small holdings of savings deposits. — <sup>5)</sup> Partial statistics collected from about 1,450 institutions; for figures on the savings deposits at all agricultural credit cooperatives see Table III A 4. — <sup>6)</sup> Central giro institutions, central institutions of credit cooperatives, private and public mortgage banks, credit institutions with special functions. — <sup>7)</sup> As from January 1960 including the Saarland. The rows of figures were linked together by showing for December 1959, firstly, the figures excluding the Saarland and, secondly, the figures including the Saarland — where possible and necessary also in the case of the individual banking groups. — <sup>0)</sup> Deutsche Bank A.G., Dresdner Bank A.G., Commerzbank A.G., and their Berlin subsidiaries. — <sup>+</sup> Sub-group of "Commercial Banks". — <sup>x)</sup> The amount of deposits at "All Banking Groups" resulting from the initial purchase of securities entitling to premiums was DM 106.4 million at the end of March 1960. — <sup>D)</sup> Provisional.

9. Short-term Lendings and Deposits according to the Semi-monthly Banking Statistics

Sample Statistics collected from 480 Credit Institutions in the area of the Federal Republic (except Berlin and the Saarland\*)  
in millions of DM

Date	Short-term lendings to non-banks						Deposits of non-banks			
	Business and private customers			Public authorities			Sight and time deposits			
	Total	Acceptance credits	Credits in current account and other credits	Discount credits	Cash advances and discount credits	Treasury bills and non-interest-bearing Treasury bonds of Federal Government and Länder	Total	Business and private customers	Public authorities	Savings deposits

<sup>1)</sup>) Figures printed in *italics* are only of limited comparability. — <sup>1)</sup> The statistics cover about 98 per cent of the aggregate balance-sheet total of all credit institutions in the area. <sup>2)</sup>) Alterations are due, in general, to merging or liquidation of institutions, or to the establishment of new institutions. In the case of larger institutions, or of a considerable number four years; also including balances at Deutsche Bundesbank deriving from settlement of foreign payments. — <sup>3)</sup> For detailed breakdown see Table III A 2. — <sup>4)</sup> After deduction of concerning Currency Conversion Compensation for Savings Balances of Expelled Persons, dated 14 August 1952, and Art. 19 of the Law concerning Old Savings, dated 14 July 1953, 24 August 1953\*. — <sup>5)</sup> Excluding agricultural credit cooperatives. — <sup>6)</sup> Including unpaid capital, own shares, etc. From September 1952 to October 1953 also including covering claims covering claims according to Art. 19 of the Law concerning Old Savings. — <sup>7)</sup> Increase due to extension to all instalment credit institutions of the obligation to render returns 1951, of the obligation to render returns. — <sup>8)</sup> Decrease due to alteration of the agricultural credit cooperatives' obligation to render returns. Whereas up to end-December 1954 those included in the statistics whose balance-sheet total on 31 December 1953 was at least DM 500,000. — <sup>9)</sup> Statistical decrease of about DM 567 million due to elimination of loans on a Dresdner Bank A.G. (May 1957). — <sup>10)</sup> Decrease owing to re-centralisation of Commerzbank A.G. (November 1958). — <sup>11)</sup> Decrease due to merging of the Gemeinwirtschaftsbanken in für Gemeinwirtschaft A.G., Frankfurt/M. (December 1958). — <sup>12)</sup> The private bankers' institutions newly included (January 1956) in the statistics have an aggregate balance-sheet total million due to statistical reasons. — <sup>13)</sup> Increase of about DM 33 million due to statistical reasons. — <sup>14)</sup> Increase of about DM 347 million due to statistical reasons. — <sup>15)</sup> Increase by showing for December 1959, firstly, the figures excluding the Saarland and, secondly, the figures including the Saarland — where possible and necessary also in the case of the Dresdner Bank A.G., Commerzbank A.G., and their Berlin subsidiaries. — <sup>16)</sup> Sub-group of "Commercial Banks". — <sup>17)</sup> Provisional.

of the Federal Republic including the Saarland and Berlin (West). Cf. "Statistisches Handbuch der Bank deutscher Länder 1948-1954", observations on methods employed in Part III. — number of institutions, alterations are explained by separate notes. — <sup>2)</sup> For detailed breakdown see Tables III A 7 and III A 8. — <sup>3)</sup> Under "All Banking Groups", including the available; as from July 1958 funds borrowed by instalment credit institutions are ascertained according to their origin, but not according to their maturity, and therefore continue to be available; As from February 1952, including global adjustment of values which, since then, has been entered by all institutions on the liabilities side; previously it was also possible to rediscounted bills". Also including equalisation claims sold to Deutsche Bundesbank with liability of repurchase. — Differences in the totals from the figures for Central Bank lendings — <sup>4)</sup> Including funds contained in "Deposits" and earmarked for specific purposes, which have not yet been passed on, monies taken for more than six months, long-term borrowings 1950: DM 249.7 million). For movement on blocked account and pre-capitulation account, cf. "Statistisches Handbuch der Bank deutscher Länder 1948-1954". — <sup>5)</sup> Increase due to group "Specialised Commercial Banks". — <sup>6)</sup> Including DM 249.7 million of deposits, not yet released, on pre-capitulation account at credit institutions in Berlin. — <sup>7)</sup> Increase Whereas up to end-December 1954 those agricultural credit cooperatives were required to render returns which had on 31 March 1948 a balance sheet total of RM 2 million and about DM 567 million due to elimination of loans on a trust basis. — <sup>8)</sup> Decrease owing to re-centralisation of Deutsche Bank A.G. and Dresdner Bank A.G. (May 1957). — <sup>9)</sup> As centralisation of Commerzbank A.G. (November 1958). — <sup>10)</sup> The private bankers' institutions newly included (January 1956) in the statistics have an aggregate balance-sheet total "liabilities" not resulting from rediscounting of bills (January 1959). — <sup>11)</sup> Decrease of about DM 46 million due to statistical reasons. — <sup>12)</sup> Increase of about DM 46 million due to Frankfurt/M. (December 1958). — <sup>13)</sup> Increase of about DM 380 million due to statistical reasons. — <sup>14)</sup> Increase of about DM 100 million due to statistical reasons. — <sup>15)</sup> Increase The rows of figures were linked together by showing for December 1959, firstly, the figures excluding the Saarland and, secondly, the figures including the Saarland — where possible "Commercial Banks". — <sup>16)</sup> Provisional.

Sep. 4	3	4		
Oct. 23	4	5		

<sup>1)</sup> Until 31 July 1957 rates of Bank deutscher Länder and of Land Central Banks.<sup>2)</sup> This is also the rate for cash advances to public authorities and to the Reconstruction Loan Corporation; cf. footnotes <sup>3)</sup> and <sup>4)</sup>. The discount rate for bills expressed in foreign currency was uniformly fixed at 3 %, for the time being, by a decision adopted by the Board of Directors of the Bank deutscher Länder on 3 Aug. 1948. By decision of 9/10 November 1949 the Board of Directors authorised the Board of Managers to fix varying rates for bills in this class, in accordance with the discount rates of the foreign Central Banks concerned. The same applies to bills in DM which have been accepted abroad (Decision of 22/23 March 1950), and also to export drafts (Decisions of 15/16 November 1950 and 23/24 May 1951); see also footnote <sup>5)</sup>. —<sup>3)</sup> Promissory notes arising under the export promotion scheme of the Reconstruction Loan Corporation were discounted at the preferential rate of 4 1/2% even after the raising of the discount rate on 27 October 1950 (Decision of 29/30 November 1950). This privilege in regard to the interest rate was cancelled by decision of 7/8 November 1951; and it could then be claimed only for promissory notes arising from credits which were granted or promised not later than 7 November 1951. — <sup>4)</sup> Under a decision taken by the Board of Directors of the Bank deutscher Länder on 20 December 1950 the interest rate for cash advances to the Reconstruction Loan Corporation was fixed, with effect from 27 October 1950, at 4 1/2% in the case of lendings to agriculture, maritime shipping and housebuilding, and at 5 1/2 1/4% in the case of lendings serving other purposes. —<sup>4)</sup> From 29 May 1952 there was in effect only the special arrangement mentioned under <sup>3)</sup> for lendings to be used for financing agriculture, maritime shipping and housebuilding, to which lendings until their redemption the rate of 4 1/2% applied. — <sup>5)</sup> As from 19 May 1956 also discount rate for foreign bills, foreign cheques, foreigners' DM acceptances, and export drafts.b) Rates Applying to Sales of Money Market Paper in the Open Market  
% per annum

account of special rates or preferential arrangements which in certain Länder have been provided and agreed for various types of credit. —<sup>2)</sup> Normal rates. It is permissible, with the lower rates are allowed, the total interest rate computed corresponds to the actual charges for credit only if the approved credit is fully taken. If it is availed of only partially the may in fact only be charged for credits actually taken. Credit commission may however be computed in advance from credits firmly approved or, in the case of tacitly granted credit, discounting. —<sup>3)</sup> Also for bills on places where there is no branch establishment of the Deutsche Bundesbank. —<sup>7)</sup> These maximum rates apply to transactions with non-banker.  
<sup>8)</sup> No interest is paid, at the Hamburg clearing banks, on giro accounts amounting to not more than DM 10,000. —<sup>9)</sup> When accepting savings deposits with agreed period of notice, Bank Supervisory Commission and with the conditions laid down in the notifications of the various Bank Supervisory Authorities, credit cooperatives whose balance-sheet total as from April 1954, exceed the maximum rates fixed for creditor interest by no more than the rates here shown; for a specification of the rates, see the special table in the Monthly

\*) Official rates for credits to non-banks, which may only be exceeded in exceptional cases. The interest rates here quoted were compiled on the basis of announcements by the Hessian Bank Supervisory Authority; in most of the other Federal Länder equal rates apply. They are to be understood as including credit, acceptance, or discount commissions, but excluding turnover commission. — \*) Apart from cases where lower rates are allowed, the total interest rate computed corresponds to the actual charges for credit only if the approved credit is fully taken. If it is availed of only partially the charges for the approved credit are below the rate quoted, whereas the charges for the credit taken may exceed this rate. According to Art. 2 of the Debtor Interest Agreement, interest may in fact only be charged for credits actually taken. Credit commission may however be computed in advance from credits firmly approved or, in the case of tacitly granted credit, from the highest debit balance. — \*) Not including domicile commission. — \*) From 1 Sep. 1949 to 26 Oct. 1950 = 7 1/2 %. — \*) From 1 Sep. 1949 to 26 Oct. 1950 = 7 %.

\*) Official rates for deposits of non-banks, which may only be exceeded in exceptional cases. The rates here quoted were compiled on the basis of announcements by the Hessian Bank Supervisory Authority; in most of the other Federal Länder equal rates apply. — \*) For larger amounts deposited (DM 50,000 — or more and DM 1 million or more, respectively) higher rates of interest were paid between 1 Sep. 1949 and 19 November 1958. — \*) In so far as monies at notice of 6 months and over carry higher rates of interest than monies placed for corresponding fixed periods, the rates quoted may be granted only where the customer does not take advantage of the right to demand repayment, in the case of monies at notice of 6 to less than 12 months for at least three months, and in the case of monies at notice of 12 months and over for at least six months, in each case from the date of the agreement. Otherwise only the rates for monies placed for fixed periods may be granted. — \*) As from 1 July 1949 = 2 1/4 %. — \*) As from 1 Jan. 1951 = 2 3/4 %. — \*) As from 1 July 1956 = 3 1/4 %. — \*) As from 1 May 1957 = 3 1/2 %. — \*) As from 20 November 1958, when accepting savings deposits with agreed period of notice, notice will only be permissible after expiry of a period of six months, such period to commence on the day of deposit.

<p><sup>1)</sup> Up to 1953 excluding Berlin; the amounts issued between 1948 and 1953 by Berlin issuers have been included in the 1954 figures. The monthly figures cover the Saarland as from July 1959 only. The annual figures for 1959 also comprise the amounts issued from 1948 to June 1959 by Saarland issuers. — <sup>2)</sup> Statistically ascertained as from January 1957 only. — <sup>3)</sup> Amounts in French francs converted at the rate of ffrs 100 = DM 0.8507. — <sup>4)</sup> Gross placing less redemption; the minus sign indicates an excess of redemption over the amount newly placed during the period under report (or, in the case of pre-Currency-Reform issues, the amount recognised under the Securities Validation Law or other indemnification laws).</p>

Source: Annual Reports and publications of the Federal Supervisory Office for Insurance Companies and Building and Loan Associations. — \*) Changes as compared with previously published figures are due to corrections subsequently received. — <sup>a)</sup> Excluding Saarland enterprises. — <sup>b)</sup> All life assurance companies, all pension funds (the end-of-quarter figures however including only the larger funds), the larger indemnity and accident insurance companies and all reinsurance companies. — <sup>c)</sup> End-of-year totals are recorded for all pension funds, end-of-quarter totals only for the larger pension funds which account for about 99 per cent of all pension funds' investments. — <sup>d)</sup> Up to the end of 1956, participations are contained in security holdings. — <sup>e)</sup> Larger enterprises only, which account for about 95 per cent of the investments of all indemnity and accident insurance companies subject to supervision. — <sup>pe)</sup> Partly estimated.

\*) As from 6 July 1959 including the Saarland. — The cash transactions recorded in this table concern in-payments on, and out-payments from, the Federal accounts at the Deutsche Bundesbank (excluding counterpart accounts and STEG accounts). Cash income and outgo deviate from the results of the Federal Government's financial statistics inasmuch as they are not recorded at the time they are entered in the budgetary accounts but at the time of the actual receipt or out-payment, and because the incurring of debt has been eliminated from the income and the expenditure on debt redemption (including repurchase of bonds) from the outgo. — <sup>1)</sup> The differences, to be observed since April 1956, between the change in the balance of cash resources and credit market indebtedness on the one hand and the cash surpluses or deficits on the other result from the channelling of the Equalisation of Burdens Levies through the account of the Federal Chief Cash Office (Bundeshauptkasse). — <sup>2)</sup> DM 124 million out of total borrowings were not used for financing the cash deficit but for covering deficits on the counterpart accounts. — <sup>3)</sup> Apart from drawing on cash resources and from the increase in credit market indebtedness, DM 106 million were available, for financing the cash deficit, from repayment of the amount mentioned in footnote <sup>4)</sup>. — <sup>4)</sup> Including credits taken from the E.R.P. Special Fund: DM 50 million in August, DM 41 million in October, DM 125 million in December, and DM 35 million in March. — <sup>5)</sup> Including DM 255 million for the repurchase of the loan taken from the E.R.P. Special Fund in the previous year. — Details may not add to totals because of rounding.

0) The figures are not fully identical with those shown in the Return of the Bundesbank, because gold holdings and foreign assets are here recorded at parity rate in accordance with the International Monetary Fund's instructions on the compilation of balance-of-payments statements, whereas in the Bundesbank Return they are computed for the end of the year according to the lowest value principle and for the current year at the rate of the day. Moreover, in the case of liabilities there are certain differences as to the delimitation of the items to be taken into account; thus, in the absence of statistical data on turnover it is not yet possible at present to make allowance in the balance of payments for all liabilities contained in the item "Deposits of foreign depositors" in the Bundesbank Return. As from the beginning of 1959 however the greater part of these liabilities has been included.

1) Credit balances on current foreign currency accounts and DM accounts as well as claims at fixed term or of only limited usability; less corresponding liabilities. — \*) In 1952 and 1953 including certain assets and liabilities such as consolidated clearing debts the changes in which were, in balance-of-payments tables, not entered under exchange movements but under capital transactions.

4. Short-term Assets and Liabilities of the Banks<sup>+</sup> in Relation to Foreign Countries<sup>\*)</sup>

\*) As from the date of the economic incorporation of the Saarland (6 July 1959) including the Saarland's transactions with foreign countries, excluding however its transactions — previously included in the balance of payments — with the other Länder of the Federal Republic. — +) Breakdown of the item "Services" contained in the table "Movements in the Balance of Payments (VII 2) for those periods on which complete data are already available. — 1) Balance of mercantile trade and other supplementary items. — 2) Cf. footnotes 1) and 2) to 3). — 3) Excluding insurance and freight costs contained in the c.i.f. import value. — 4) Including receipts of German maritime shipping and German insurance companies from German exporters and importers. As far as payments of German exporters are concerned they result in corresponding receipts of exporters under c.i.f. export contracts; where, however, payments of German importers are concerned these are included as expenditure in the c.i.f. import value. — 5) Excluding interest paid under the London Debts Agreement on German-held external loans. — 6) Services used or rendered by German or foreign government agencies and not included in any other item of the balance of payments. — 7) Receipts from deliveries and services to foreign troops.
