Reviewing the monetary target for 1986

At its meeting on July 3, the Central Bank Council of the Deutsche Bundesbank reviewed the monetary target for the current year. It came to the conclusion that the target set in December 1985, which envisages a growth in central bank money stock from the fourth quarter of 1985 to the fourth quarter of 1986 of 3½ to 5½%, should be retained. The derivation of the monetary target for 1986 at the end of last year was based on the assumption that overall economic production potential, calculated at current prices, could increase by about 4½% on an average this year. Economic trends to date, which received extensive treatment in June this year in these Reports (see Monthly Report of the Deutsche Bundesbank, Vol. 38, No. 6, June 1986, p. 5), do not warrant any reappraisal of the basic data taken into consideration when setting the target at the end of last year. Most recent survey results indicate a continuing high investment propensity on the part of business. At the same time, the strong creation of job opportunities continued without interruption through the winter months, when economic growth came temporarily to a halt. So it still seems appropriate to assume a *real* potential growth rate for the current year of about 2½%. The increase in the GNP deflator, originally set at roughly 2%, will very probably be exceeded this year, but this will not be primarily attributable to inflationary tendencies at home, but will follow from the massive fall in oil prices and the appreciation of the Deutsche Mark. The resulting improvement in the terms of trade, which is not matched by a corresponding fall in domestic prices, produces a ballooning in the GNP deflator in the national accounts. The increase in the GNP deflator is by no means identical with the trends in "prices of goods sold at home"; these will rise somewhat less in 1986 than was earlier expected. The longer-term *price trend*, which is included in enterprises' and households' calculations, will probably lie between the rates of increase for the two price indices, which is why the original assumption of a price rise of 2% has not been changed.

To the end of June 1986 the *central bank money stock*, at an annual rate of about 6½% against the fourth quarter of 1985, expanded more quickly – if the growth rate were to continue at such a speed – than would be consistent with this year's monetary target. At the beginning of the year, the central bank money stock exceeded the upper edge of the target corridor even more strongly, ini-

tially. Demand for currency went up particularly markedly in January 1986, and this was probably to some extent the correction of the very weak trend in December last year, when currency in circulation, seasonally adjusted, had fallen by just under DM 0.5 billion. Moreover, bank liabilities subject to reserve requirements went up at the start of the year owing to a major sale of industrial assets, which had an expansionary effect on the money supply. In addition, there were speculative inflows of funds from abroad ahead of the realignment in the European Monetary System at the beginning of April 1986. By now, these factors have probably lost importance. The trend in the central bank money stock in May and June, which weakened somewhat, shows this; viewed from the vantage point of mid-year, the money stock did however grow somewhat too strongly to that point.

This judgement is also valid if one takes some remaining difficulties into consideration, which should not be ignored when interpreting the most recent trend in both main components of the central bank money stock – currency in circulation and the minimum reserve requirement at constant reserve ratios. *Currency in circulation*, which has a high weighting in the Bundesbank's indicator, expanded disproportionately fast, as did sight deposits, in the first half-year. Both the historically low interest rates, which are currently being paid for shorter-term alternative deposits on time and savings accounts, and specific reasons, such as the increase in "cash-intensive" transactions at home and abroad and the fact that Deutsche Mark banknotes are staying abroad somewhat longer, may have contributed to currency in circulation having grown particularly strongly of late.

If this slightly overstates the pace of monetary expansion, it should be realised that the traditionally-defined *reserve component* does not fully reflect the expansion in non-banks' money holdings in the current year. The most important reason for this – an unusually rapid increase in deposits of big German firms at the foreign branches of domestic banks, which have to be considered as "quasi-money" – was recently discussed in detail in these Reports (see Monthly Report of the Deutsche Bundesbank, Vol. 38, No. 6, June 1986, p. 12). Including, hypothetically, both the considerable liquidity surplus of enterprises invested on the Euro-market and their holdings of short-term bank bonds in the calculation of an "extended" central bank money stock, a growth at mid-year of somewhat above the value of 6 1/2% obtained in the traditional way results; inclusion of these "cash holdings" abroad at any rate provides further evidence of a strong monetary expansion.

The trend reflected in the expansion of the central bank money stock towards increased cash holdings, and currency and sight deposits in particular, developed at a time when domestic growth initially went through an extensive "winter break" and then picked up in spring. As the domestic business climate strengthens increasingly, it is possible from now on that the idle balances which were built up in the last few months will be drawn upon more and more. This, and the fact that specific influences, at work at the beginning of the year, are no longer operative could mean that the expansion of money and credit will be somewhat

more subdued in the near future. Proceeding on the basis of these assumptions the Central Bank Council arrived at the conclusion that growth of the central bank money stock will tend to slow down in the second half of the year. On the other hand, considering the dangers which would result in the long term from an overly strong expansion in the money stock, the Central Bank Council deems it appropriate to continue the monetary policy stance which has been geared to date on medium-term stability, taking into account Germany's current domestic and external position.

When forming this opinion, the Central Bank Council took into consideration the most recent data on economic trends in Germany. As described in the following commentaries, the economy overcame in spring the growth pause of the first quarter caused by special influences. Output, employment, sales and incomes are rising again, largely owing to the expansion in domestic demand. At an annual rate of about 3%, real gross national product is on the growth path again which it has been taking, albeit not continuously, since the fourth quarter of 1982. Employment has gone up in total, through and since last winter, when the economy temporarily slowed down, by about 400,000 persons since its low point in summer 1983. The unemployment rate, as a percentage of the dependent labour force, has fallen to 9% by the middle of the year; this was a rate of just under 8% if — as is the practice abroad and particularly in the United States — the number in the total labour force (i.e. including self-employed persons) is used as a denominator. The price situation, which as a consequence of the sharp reduction in the oil price and the appreciation of the Deutsche Mark is currently being favourably influenced by inflation-restraining special factors, is characterised by stability; however, the longer-term price trend, as already indicated above, is to be estimated at an annual rate of about 2%. With the nominal interest rate being under 6% (for government bonds), the real interest rate, i.e. the rate adjusted for expected inflation, is by no means unusually high.

The external situation, as already outlined in the June Monthly Report (p. 36), features a reduction in the real current account surplus. Whereas the volume of exports of late has basically tended towards stagnation, that of imports has continued to expand considerably. In spite of the nominally high German surplus position, which is determined

by, among other things, the strong fall in import prices, Germany is on the way to external adjustment and is thus also accommodating its trading partners' interests.

Commentaries

Monetary analysis

The *money stock in the traditional, extended definition M3* (currency and sight deposits, time deposits for less than four years and savings deposits at statutory notice held with domestic non-banks) tended to grow moderately in May, seasonally adjusted. While shorter-term time deposits and borrowed funds and savings deposits at statutory notice grew vigorously, the rise in currency in circulation and sight deposits was sluggish after the preceding strong increase. Over the last six months the money stock M3 (excluding German non-banks' cash holdings at banks abroad) went up at a seasonally adjusted annual rate of 5½%; its year-on-year increase came to just on 5% at the end of May, while that in the money stock M2 (M3 excluding savings deposits at statutory notice) amounted to 3½% and that in the money stock in the narrowest definition M1 (currency and sight deposits) to over 8½%.

Bank lending to enterprises and individuals, after elimination of seasonal influences, was slightly lower in May than a month before, but continued to be fairly strong. The expansion of longer-term direct advances remained faster than that of short-term lending. Over the last six months total bank lending to the private sector mounted by a seasonally adjusted 5½%.

Recourse to bank credits slackened in May, presumably because domestic non-banks' external payments produced substantial inflows of funds for the first time since February this year. The *net external assets of the banks and the Bundesbank*, the rise in which reflects these inflows, rose by DM 4.5 billion, compared with a decline of DM 3.6 billion in April.

Public sector cash transactions stimulated monetary developments less in May than in April. Specifically, public sector borrowing from the banking system (Bundesbank and banks) increased by DM 1.9 billion. Public central bank deposits, which are not counted as part of the money stock, went down by DM 1.4 billion. The second instalment of the Bundesbank profit credited to the Federal Government at the end of May (of DM 2.3 billion) was thus fully monetised.

Monetary capital formation once again slowed monetary growth only moderately in May. In all, DM

5.8 billion of longer-term funds flowed to the banks (compared with DM 6.6 billion a year before). Over one-half was accounted for by long-term time deposits and borrowed funds (DM 3 billion). The banks' capital and reserves (DM 1.5 billion) and savings deposits at agreed notice (DM 1 billion) were also stepped up appreciably. Sales of bank bonds (DM 0.7 billion) and bank savings bonds (— DM 0.4 billion) to domestic non-banks, by contrast, were very sluggish.

- 10 “Other factors”, which in the short run are often subject to major random fluctuations, had a marked contractionary effect on monetary expansion in May. Their negative balance, contrary to the usual trend in that month, did not fall sharply, but increased slightly, partly because of fluctuations in the processing of cashless payments.

Central bank money stock

After the slow expansion in May the central bank money stock continued to grow moderately in June. On preliminary data it went up (seasonally adjusted and calculated at constant reserve ratios, base: January 1974) by DM 0.6 billion to DM 210.8 billion. The rise was mainly attributable to the increase in currency in circulation. This development brought the central bank money stock a stage closer to this year's 3½ to 5½% target corridor. At a seasonally adjusted annual rate of 6½%, growth against the fourth quarter of 1985 was still 1 percentage point above the top end of the corridor in June.

The raising of funds in the German *bond market* declined somewhat in May against the previous month. Domestic and foreign issuers borrowed DM 7.6 billion (net) in the bond market, compared with DM 9.1 billion in April (and DM 11.0 billion a year before). However, only the issuing activity of domestic borrowers was muted. They issued bonds to the market value of DM 13.6 billion (gross). After deduction of simultaneous redemptions and the amounts issuers added to their own holdings net sales worked out at DM 3.0 billion against DM 6.4 billion in the preceding month. Long-term maturities continued to account for the bulk of issuing activity (DM 6.1 billion), whereas redemptions of shorter-term bonds (with maturities of up to and including four years) came to DM 3.0 billion (net). In May bonds of foreign borrowers in the record amount of DM 4.6 billion (net) were sold in the German bond market.

In the month under review about two-thirds of domestic borrowers' net sales involved bonds of the *public sector* (DM 2.0 billion); on balance, all of the funds raised flowed to the Federal Government. The greater part stemmed from the sale of a bond issue, which it offered at end-May in two tranches with maturities of 10 and 30 years. The Federal Government received on balance DM 0.6 billion from sales of five-year special Federal bonds and Federal savings bonds. The Federal Post Office reduced its liabilities in the bond market by DM 1.1 billion, the Länder Governments by DM 0.1 billion. In May *banks* placed own bonds of DM 1.1 billion (net), which consisted in particular of communal bonds (DM 0.7 billion) and mortgage bonds (DM 0.5 billion). Bonds of specialised banks were sold in the amount of DM 0.1 billion, whereas the outstanding amount of “other” bank bonds decreased by DM 0.3 billion.

In the market for *foreign Deutsche Mark bonds* issuing activity reached a new record level in May. Foreign borrowers launched 20 issues to the nominal value of DM 5.1 billion mainly with long-term maturities of 10 to 30 years. Most of the issues were floated as “traditional” fixed-rate loans. After deduction of redemptions net sales worked out at DM 3.8 billion of which one-half was sold in Germany.

Banks (DM 4.1 billion) predominated on the buyers' side of the market in May. They purchased mainly foreign bonds (DM 2.7 billion), especially foreign

preceding month (DM 1.5 billion), but more than a year before (DM 0.5 billion). On balance, almost all the funds borrowed accrued to the bond-based funds. The specialised funds received DM 0.6 billion.

Deutsche Mark bonds; these came probably for the most part from holdings of new issues which had not yet been sold. Banks added domestic bonds to their portfolios in the amount of DM 1.4 billion. In May *non-residents* spent DM 2.4 billion on domestic bonds; purchases of public bonds continued to predominate. *Domestic non-banks* increased their bond portfolios by DM 1.1 billion net. On balance, they only purchased foreign paper, primarily foreign currency bonds, whereas they sold at the same time DM 0.8 billion of domestic bonds.

In May domestic enterprises again raised substantial funds in the *share market*. They offered new shares to the market value of DM 1.8 billion and thus distinctly exceeded the figure of the previous month (DM 1.1 billion) and the same month of last year (DM 0.9 billion). Moreover, DM 0.8 billion in foreign shares was placed in the German market, whereas at the same time foreign investors purchased German shares to the amount of DM 0.7 billion. The German *investment funds* (those open to the general public) received DM 0.8 billion in May. This was noticeably less than in the

12 Federal cash trend

In the first half of 1986 two special factors had a very positive effect on the Federal cash trend. The Bundesbank profit of DM 12.7 billion to be transferred to the Federal Government for the 1985 accounting year had already been fully paid out in cash terms by the end of June; in the preceding year the Federal Government had only received DM 9 billion by that time. Besides, between January and June the pension insurance funds only required some DM 2 billion of Federal grants brought forward in excess of the normal instalments in order to bridge temporary liquidity requirements; this was approximately one-third of the corresponding amount of the previous year. In these circumstances the Federal cash deficit in the first half of the year came to only DM 6.5 billion, against almost DM 16 billion a year earlier. Thus both the trend of the cash balance and the changes in cash receipts and expenditure in the first half of the year, shown in the table on this page, are not characteristic of the year as a whole. The special factors will work in the opposite direction in the second half, i.e. deficits and net borrowing (which was relatively small in the first six months) will exceed the amounts of last year. From the present perspective it can still be assumed that the actual trend for the entire year will roughly conform to the budget. Extra burdens arising largely from additional expenditure for agriculture are to be absorbed by spending cuts. To ensure this, the Federal Minister of Finance has placed a partial ban on some types of expenditure.

The said special influences were of little significance in June. The fact that the Federal Government received DM 2.4 billion as the final instalment of the Bundesbank profit, whereas a partial amount of DM 2.0 billion had been transferred a year previously, had a positive effect on the receipts side. This contributed to the growth of 7% in cash receipts in June. Cash expenditure rose by almost as much. On balance the Federal Government recorded in this month with a major tax payment date a cash surplus of DM 4.9 billion, i.e. DM 0.5 billion more than a year earlier.

Public debt

The central, regional and local authorities have latterly not drawn very intensively on the credit markets. For one thing, borrowing requirement was

* The cash transactions recorded as cash receipts and expenditure concern payments into and out of the accounts kept with the Deutsche Bundesbank by the Federal Government. The cash receipts and cash expenditure differ from those in the official financial statistics primarily because they are recorded not at the time they are entered in the budgetary accounts but at the time of the actual receipt or outpayment and because transactions on behalf of the European Communities, which are entered not in the Federal budget but in appendices thereto, are settled through the accounts of the Federal Government. — 1 Deposits with the Bundesbank and other credit balances. — 2 In the current year excluding the last month. — p Provisional. low in view of the favourable cash trend; for another, the unstable situation on the capital market induced the central, regional and local authorities to exercise restraint. In May the Federal Government was virtually the only net borrower; its credit market indebtedness grew by DM 2.1 billion. The outstanding amount of standard Federal bonds rose by DM 2.5 billion owing to the issue of two tranches (with maturities of 10 and 30 years, respectively). Moreover, liabilities arising from five-year special Federal bonds and Federal savings

bonds increased by DM 0.4 billion and DM 0.1 billion. On the other hand, DM 0.8 billion of loans against borrowers' notes was repaid on balance. In addition to the funds obtained in the market, the Federal Government required DM 1.7 billion of Bundesbank advances at the end of May; a month previously it had not drawn on that facility. On the whole, the indebtedness of the *other public authorities* remained virtually unchanged.

Gross borrowing by the Federal Government was relatively low in *June* because the capital market situation was still characterised by investors' reluctance to buy. Besides, the Federal Government had no urgent financial requirements in that month with massive tax receipts. Redemptions therefore outweighed the funds newly raised in the market by DM 2.8 billion. Liabilities were generally declining with the exception of bonds; no such items fell due for redemption, and their outstanding amount rose by DM 0.8 billion as a result of price-regulating sales. Given the improvement in its cash position, the Federal Government also repaid the Bundesbank advances it had obtained at the end of May. In June the Federal Government's overall indebtedness thus shrank by DM 4.5 billion.

New orders

Demand for industrial products has picked up again in the spring months. In May the *orders received by the manufacturing sector* were somewhat lower, seasonally adjusted, than in April when they had increased fairly strongly. On an average of April-May orders exceeded both their level of the first quarter of this year and their 1985 level by about 1%. The main factor in this was the clear rise in *domestic demand*, especially in the capital goods sector which, inter alia, booked some large-scale orders. After adjustment for seasonal influences, 7½% more orders were received from the home market in April-May than on an average of the three previous months. High growth rates were achieved by enterprises in mechanical and electrical engineering, but particularly by road vehicle manufacture which is closer to consumption. By contrast, seasonally adjusted domestic orders to the basic and producer goods sector dropped slightly, mainly because of price reductions; in terms of volume the inflow of orders to this economic sector in the last two months covered by the statistics was somewhat larger than on an average of the first quarter. Orders for consumer goods (excluding passenger cars) decreased by about 1½% in the same period. In all, seasonally adjusted domestic demand in April-May was about 3% above its level of the first three months of this year.

Foreign demand for the products of the manufacturing sector in April-May declined by roughly 2%, seasonally adjusted, compared with the average of the first quarter. Orders for capital goods but also those for consumer goods, in particular, decreased. In the basic and producer goods sector the inflow of orders has been unchanged in value of late; however, in terms of volume and after seasonal adjustment, foreign orders increased in April-May.

Output

In April-May *industrial production* (excluding construction) expanded by just over 1½%, seasonally adjusted, against the average figure of the first quarter; after adjustment for working-day variations, it exceeded its comparable 1985 level by about 4% in these two months. On the one hand, it is advisable to combine the figures for April and May because of the very differing working-day influences in these two months which are difficult

to assess; whereas output in April benefited from a comparatively large number of working days, the accumulation of public holidays and the associated vacations reduced production in May. Thus seasonally adjusted output in May was some 2% below the relatively high figure of the previous month. On the other hand, the two-month calculation reduces the uncertainty attached particularly to initial figures for months with opposite working-day influences. For example, the provisional output figures for April were revised upwards by the Federal Statistical Office to a much greater extent than originally announced, namely for the producing sector (excluding construction) by 2½ index points. Moreover, it is not clear which corrections will be made to the provisional May data. In the manufacturing sector in April-May, seasonally

adjusted, all the main areas were able to step up their output against the level of the first quarter. At nearly 3%, the growth was strongest in the capital goods sector where among the major economic branches the sharpest expansion was registered by mechanical engineering. In April-May seasonally adjusted *output of the construction industry* was 3½% higher than the monthly average of the first quarter of this year which was adversely affected by the unfavourable weather.

Labour market

In June, too, an upward tendency was recorded on the labour market. In particular, enterprises' demand for labour has increased of late. This is implied by the rising number of *vacancies* newly registered by the labour exchanges (just as by the growing number of situations vacant advertised in the daily newspapers). At the end of June more than 150,000 vacancies were registered, seasonally adjusted, over 40% more than twelve months earlier. In addition, *short-time working* was further reduced in June; in the middle of the month the labour exchanges registered only 120,000 wage and salary earners with reduced working hours, over one-quarter fewer than a year before. After adjustment for seasonal fluctuations, the number of *unemployed persons* decreased by 15,000 in June; in that month it came to 2.23 million or 9% of the dependent and 7.9% of the total labour force. Since the beginning of the year the seasonally adjusted number of jobless declined by about 65,000. This drop owed something to the fact that in the first few months of the year unemployed persons who were 58 or older made use of the arrangement under section 105c of the Work Promotion Act and declared to the labour exchanges that they were no longer available for placement. These persons are naturally no longer registered as unemployed. According to information from the Federal Labour Office, this factor was no longer of significance for the decrease in unemployment in June. It is noteworthy that the seasonally adjusted number of unemployed men continued to decline in June, whereas that of unemployed females has tended to rise of late. Almost one-quarter of all unemployed women were looking for a part time job in June.

Balance of payments

In May the *current account* of the German balance of payments (foreign trade, services and transfer payments combined) ran a surplus of DM 6.0 billion which was thus virtually as large as a year before (DM 5.9 billion), but distinctly smaller than in April (DM 8.2 billion). The surplus also decreased against the preceding month after adjustment for seasonal fluctuations.

The main reason for this was that the trade surplus fell from DM 10.0 billion in April to DM 8.1 billion in the month under review. A year earlier the *trade surplus* had amounted to DM 7.5 billion. Foreign trade values declined considerably against the corresponding period of last year, viz. by 13½% in the case of exports and 17½% in the case of imports. However, this was attributable firstly to the fact that, calculated on the basis of the five-day week, May this year had two working days less than May 1985. Secondly, foreign trade prices had declined, especially on the imports side (– 20%), but also on the exports side (– 2½%). After elimination of the effects of working-day variations and price changes, imports rose steeply in May compared with last year, while the volume of exports seems to have declined only slightly. In seasonally adjusted terms imports fell by almost 2% in value in the two-month period from April to May as against February-March 1986 because of the above-mentioned decline in prices while exports maintained the level of the preceding two months.

A surplus of DM 0.4 billion was recorded on *services account* in May, as in the previous month. Foreign travel again produced a large deficit (DM 1.9 billion), but at the same time Germany gained a surplus of DM 0.9 billion from investment income payments to and from other countries. Besides, as usual, Germany had net receipts resulting from currency conversions by foreign troops stationed in this country. At DM 2.0 billion, Germany's traditionally high deficit on *transfer payments account* was slightly lower in May than in the preceding month (DM 2.2 billion).

In the field of *long-term capital transactions* funds flowed out again on balance in May (following large imports of capital in the first four months of this year) and amounted to DM 2.1 billion. The decisive reason for this was that non-residents' investments in German securities declined noticeably. In May foreigners acquired DM 2.4 billion of domestic bonds, against DM 6.3 billion in the

preceding month. At the same time foreign purchases of German shares fell to DM 0.7 billion (after DM 1.3 billion in April). German securities investments abroad, however, rose against April, by DM 1.2 billion to DM 5.1 billion. Including the transactions in official borrowers' notes, which in May accounted for an export of capital of DM 0.8

16 billion, external securities transactions in May thus resulted in net exports of DM 2.7 billion, compared with capital imports of DM 3.2 billion in April 1986. In the other sectors of long-term capital transactions, however, small net inflows predominated. It was the banks' lending business in particular that led to imports of long-term funds amounting to DM 1.2 billion. On the other hand, direct investment and official loans led, as usual, to outflows of funds (totalling DM 0.9 billion).

In the field of statistically recorded *short-term capital transactions* substantial funds were again exported in May (DM 11.3 billion on aggregate, following DM 12.5 billion in April). Substantial funds, viz. DM 7.6 billion net, flowed out especially from the banks during the month under review. The banks' short-term external assets increased by DM 4.6 billion, while their corresponding external liabilities declined by DM 3.0 billion. This owed something to the settlement of foreign exchange swaps concluded a month earlier between the Bundesbank and the banks. Domestic enterprises exported DM 4.1 billion (net) of short-term funds, which was considerably less than in April (DM 10.0 billion); in particular, claims arising from short-term financial credits to other countries, at just on DM 3 billion, increased only half as strongly as in the preceding month.

The *net external assets of the Bundesbank*, valued at balance sheet rates, declined by DM 4.4 billion, mainly because the above-mentioned foreign exchange swaps with domestic banks ran out. In *June* the net external assets increased by DM 1.0 billion.

Fall in oil prices and the external energy account of the Federal Republic of Germany

As a highly developed industrial country without major domestic energy sources (if coal is left out of account), the Federal Republic of Germany is particularly dependent on imported energy, and petroleum imports still play a special part. Oil price fluctuations thus do not only strongly determine the level of energy prices at home, but also have direct effects on Germany's current account. Initially, in the wake of the price surges triggered by the two oil crises – in 1973-74 they caused German import prices of oil to increase five-fold and in 1979-80 to rise again nearly three-fold – imports of crude oil and mineral oil products went up exceptionally strongly in price. In 1985 Germany had to spend about DM 70 billion on imports of oil and oil products, compared with only DM 10.5 billion in 1972, the last year prior to the first oil price hike. If imports of natural gas and other energy sources are included (whose price movements follow those of the oil prices), total energy imports in this period went up from DM 12 billion to DM 95 billion.

The sharp increase in the value of energy imports was accompanied by heavy domestic and external adjustment burdens for Germany. In particular, greater export efforts were required to cover the higher energy costs. Whereas in 1972 expenditure on total energy imports could be "paid for" by about 8% of German exports, this share had risen to 23% by 1981; as a result of the sharp expansion in German exports in the last few years, this percentage declined to almost 18% of exports or 5.2% of the total gross national product by 1985. The dramatic price rise for imported energy was, among other things, a major reason why Germany's current account temporarily ran a high deficit between 1979 and 1981. The precipitous rise in the cost of energy and the impetus this gave to inflation at home forced the economy and economic policy-makers in Germany to take domestic adjustment measures, for instance to substitute other sources of energy for oil and to make every effort to conserve energy, which at times impaired economic growth and employment. With the most recent fall in oil prices, the starting point of this article, the German current account conversely showed a marked improvement. The results of the econometric study described in the following article of this Report, inter alia, prove that this also strengthened the cyclical recovery in Germany.

18 **Movements in the prices of energy imports since 1981**

The strong oil price surges until the beginning of the eighties triggered conservation and substitution processes not only in Germany but also in other oil-importing countries and led to an expansion in oil production of a number of oil-exporting countries – above all outside the Organisation of the Petroleum Exporting Countries. Soon after the peak of the oil price crisis in 1981, the international oil market tended to be under supply pressure as a result of these market adjustments. With the progressive adjustment processes, which were reflected world-wide in a decline in oil consumption, excess capacities grew rapidly in the oil-producing countries; the rising supply from the North Sea oil fields played a major part in this. The cartel of the OPEC countries tried to support the oil price by agreed production limits for the individual member countries, but it became increasingly clear that in view of the heterogeneous interests of the individual states a common approach among the OPEC countries could not be ensured in the long run. The price of crude oil, calculated on a US dollar basis, therefore declined until the end of 1985, on the whole not inconsiderably, from the peak it had reached in 1981. Germany's crude oil import price (c.i.f., viz. including transport and insurance costs), which in 1981 had averaged about US\$ 37 per barrel, fell to close on US\$ 34.5 per barrel in 1982, and by 1985 it averaged US\$ 28.5 per barrel; it was thus as much as 23% lower than in 1981.

Irrespective of the excess capacities, there has not been a major supply pressure and thus a price slump on the oil market in the last few years, and this is ascribable to the fact that Saudi Arabia, as the most important oil exporter of the OPEC group, curbed its production considerably, thus bearing the brunt of adjustment in the OPEC area. The total oil production of the OPEC countries on an annual average in 1985 came to only 16 million barrel per day; it was thus 50% lower than before the second oil price crisis. The share of the OPEC countries in total oil production fell from 47% in 1979 to 28% last year. By contrast, the share of crude oil from the North Sea oil fields doubled from 3% to 6% in the same period, and other countries, like the United States, Mexico and the USSR, likewise raised their production share.

The shifts in the weightings of the oil-producing countries also made themselves felt in German oil imports. Total purchases declined but Germany's volume of petroleum imports from the United Kingdom increased by 46% to just over 17 million tons between 1979 and 1985; including the supplies from Norway, Germany, at 20.5 million tons, obtained about 32% of its oil imports from the North Sea oil fields in 1985. The USSR, too, was able to expand its petroleum sales in Germany, in percentage terms from 3½% in 1979 to 6% in 1985. By contrast, German crude oil imports from the OPEC countries fell by nearly 60% to only 35 million tons; the share in total crude oil imports dropped from 80½% in 1979 to 54½% in 1985. As trends are similar for many oil-importing countries, the predominance on the market of the "oil cartel" of the OPEC countries waned considerably. By con-

trast, the supply policy of the oil-producing countries of the North Sea continues to be oriented to a sharp expansion of output because production capacities were created at great expense whose idleness would entail far heavier losses than in the case of the continental producers in the Persian Gulf.

For Germany, however, imports of crude oil and mineral oil products, calculated in Deutsche Mark, did not bring any relief on the price side until 1985 as the fall in oil import prices on a dollar basis was nearly offset by the steep appreciation of the US dollar against the Deutsche Mark. The decline in the dollar prices of crude oil, which started in mid-1981, may have been indirectly connected with the overvaluation of the dollar. Firstly, in spite of the decline in world market prices, the purchasing power of their oil exports was not only maintained for the oil-exporting countries outside the dollar area, but in some cases increased owing to exchange rate movements. Secondly, the oil-importing countries continued to exercise restraint in oil consumption as oil prices in national currencies were still high. In the first quarter of 1985 the appreciation of the US dollar against the Deutsche Mark came to 44% compared with the annual average of 1981. In spite of the lower world market prices for petroleum, Germany was therefore forced in that period to import crude oil at a price which – as measured by import unit values – was 10% higher than on an annual average in 1981. It was only after the dollar rate had passed its peak in the course of the first quarter of 1985 that Germany benefited from the decrease in oil prices as oil imports cheapened not only as a result of the falling world market prices on a dollar basis, but also because of the depreciation of the dollar.

Since the beginning of 1986 there have been dramatic falls in prices on the international oil market. They were triggered by the fact that the OPEC member countries distinctly expanded their oil production and that to this extent the oil cartel collapsed by itself – as has nearly always been the fate of raw material cartels. A key factor in this was once again the behaviour of Saudi Arabia which was no longer prepared to compensate for the rising production of other OPEC countries by reducing its own production, i.e. to continue to play the role of a "swing producer". As a result of the existing latent supply pressure, oil prices on a dollar basis have fallen sharply in several stages in

the first few months of 1986; the import price (c.i.f.) of crude oil free German border dropped from just over US\$ 29 per barrel in December 1985 to US\$ 18.5 per barrel by March this year; by May it had gone down further to about US\$ 14 per barrel.¹ The decay in oil prices persisted until the middle of this year; on the market for immediately available supplies, the "spot market", standard qualities of North Sea

¹ When considering these price data it should be borne in mind that the price of imported crude oil at the German border in the first few months of this year could not always be recorded accurately owing to "netback agreements". Under these agreements the import prices to be actually paid are calculated later, namely on the basis of the prices of a "basket" of mineral oil products at a certain point in time after delivery; the freight and refining costs as well as a profit margin for the purchaser are deduct-

ed from the value of this "basket". About one-third of the crude oil imported into Germany is settled under such netback agreements. When prices generally tend to decline, the statistics based on price data for oil at the border are likely to reflect actual price movements with a time-lag.

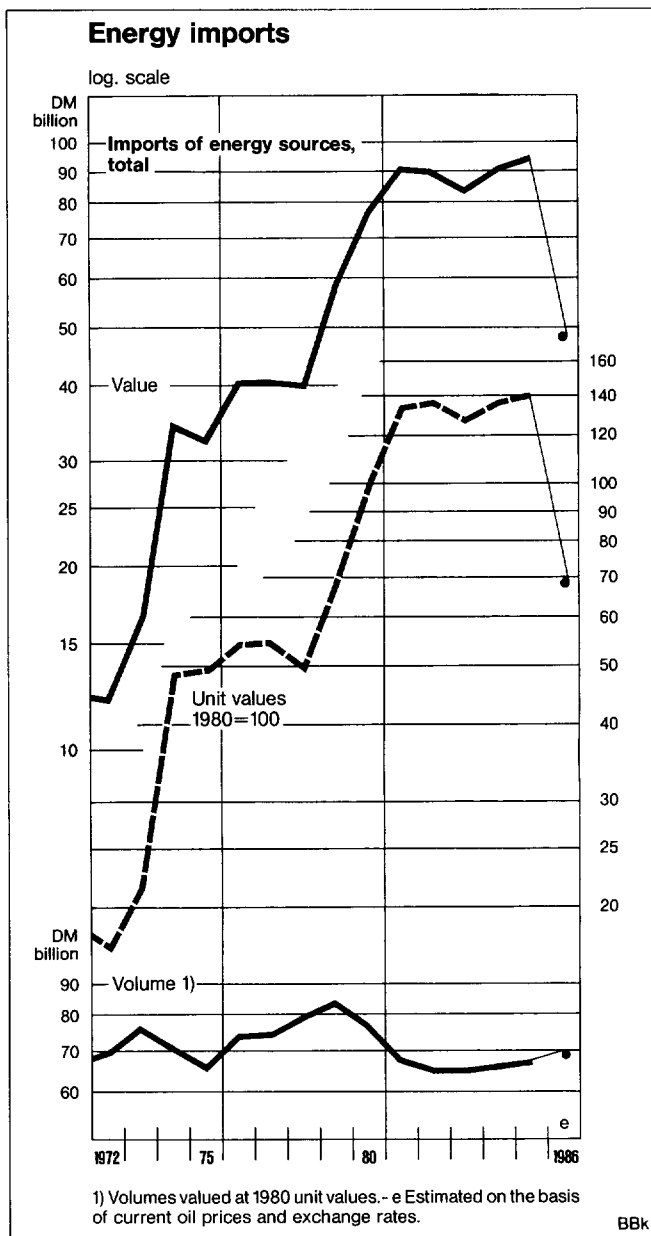

20 oil cost only US\$ 10 to US\$ 11 per barrel at the end of June.

The appreciation of the Deutsche Mark against the US dollar in this period – as in the course of 1985 – was another factor in the cheapening of German oil imports. As measured by import unit values, the price of imported crude oil in Germany in May 1986 was 64½% below its 1985 level, whereas the dollar price per barrel (including transport and insurance costs) halved within one year. The prices of mineral oil products and other energy sources, too, have dropped distinctly so far this year, albeit not as steeply as those of crude oil imports. Thus imports of mineral oil products – mainly petrol and heating oil – cheapened by 53% in May this year as compared with the previous year. Import unit values for natural gas showed a year-on-year fall of 20%. While the price of light heating oil is regarded as a reference price for natural gas contracts, according to the delivery contracts, price reductions only follow the price changes on the market for mineral oil products with a fairly long time-lag. However, several public utilities have passed on some of the price reductions in advance for competitive reasons, while others have not yet done so. Imports of all sources of energy, taken together, cheapened by almost 50% from December 1985 to May this year, seasonally adjusted; in the first five months of 1986 import unit values were 41% lower than in the preceding year; this alone thus resulted in savings of foreign exchange expenditure on energy imports of two-fifths within one year.

Real adjustment of energy imports since 1981

The quantity of energy used by both industry and households was reduced considerably in the last few years as a result of the conservation measures and substitution processes triggered by the price increase for energy. Whereas in the sixties consumption of primary energy, for instance, rose at a disproportionately fast pace relative to the real gross national product, its overall increase in the seventies and eighties lagged behind GNP growth. In individual years energy consumption in Germany did in fact decline in spite of an expansion of the gross national product.

The reduced dependence on energy of the German economy has resulted in a considerable fall in price-adjusted energy imports as compared with

the time prior to the upsurges in oil prices. In 1985 the volume of energy imports was about 20% down on 1979 and 12% down on 1973. In the case of crude oil imports alone, savings against 1979 came to as much as almost 40%. By contrast, imports of mineral oil products have risen in volume in the last few years; they exceeded their 1979 level by 12%. The divergent trend for these two energy sources is attributable to the fact that owing to the fierce price competition for individual mineral oil products further processing of crude oil in domestic refineries was comparatively more expensive than the direct import of such products. This also contributed to the dismantling of sizeable refinery capacities in Germany. In all, imports of crude oil and mineral oil products in

1985 were 24 % down on their level of 1979. As a percentage of the consumption of primary energy, petroleum has therefore declined distinctly in importance in the last few years. In 1979 the share of mineral oil in the consumption of primary energy had come to almost 51 %, but by 1985 this percentage had fallen to 41½ %. Conversely, the share of imports of nuclear energy rose sharply from 3½ % in 1979 to 10½ % last year.

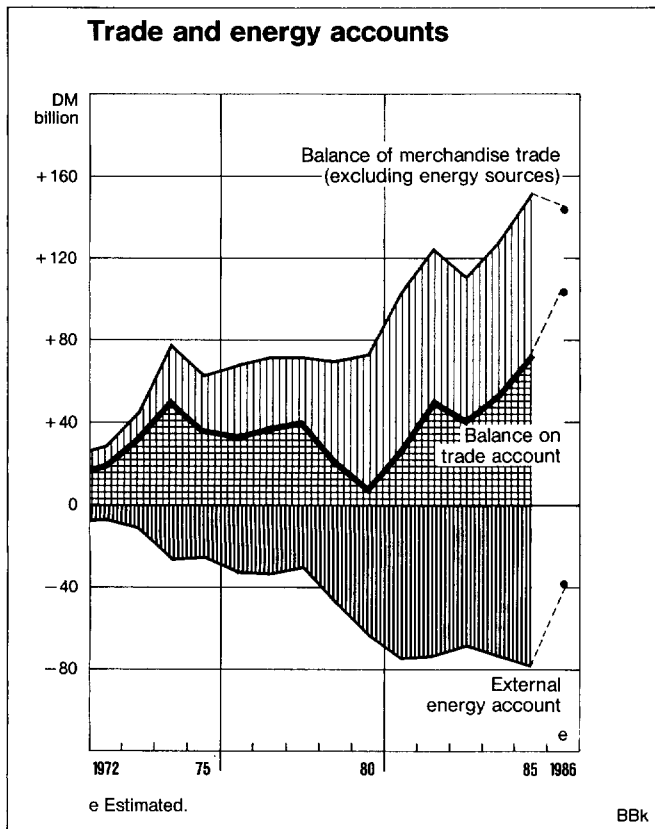

The tendency towards reduced oil imports has not continued in the first few months of 1986. Consumers in Germany responded to the declining price trend with a marked revival of demand for energy in volume terms; above all, increased purchases of light heating oil were brought forward by households. Between January and May 1986 the volume of imports of energy sources went up by a seasonally adjusted 5½ % against the preceding five months; compared with the previous year the increase came to almost 10 %. Whereas imports of crude oil were somewhat lower in volume than a year earlier and purchases of the relatively expensive natural gas did in fact decline considerably in volume (by 17½ % against January to May 1985), 48 % more mineral oil products were imported. Imports of light heating oil, in particular, expanded considerably within one year, more than doubling in price-adjusted terms. In view of the declining price tendency, consumers refilled their heating oil tanks earlier than usual; the seasonal trend in demand, which otherwise peaks in the late summer and autumn, is likely to have changed considerably this year owing to the increase in purchases during the last few months. Imports of heavy heating oil, too, rose by over one-third against the previous year, inter alia because of the economic revival in Germany and the cold winter weather. However, with the rise in imported quantities of energy the effect of the decrease in energy prices on the balance of payments was only slightly offset.

External energy account

Germany's expenditure on imported energy in 1985 amounted to DM 95 billion; it thus came to 5.2 % of the gross national product, which was 3½ percentage points more than in 1972. In 1986 spending on energy imports will fall noticeably, but will still of course be much higher than in 1972. In the first five months of this year 35 % less was spent on energy imports than at the same time of the previous year in spite of a 10 % rise in the volume of energy

imports. Looking at 1986 as a whole, the relative decrease in import values for energy is, in fact, to be put considerably higher. Firstly, oil import prices in the first few months of 1986 were initially comparatively high and did not fully adjust to the lower price level on the international oil markets until May. Secondly, the main portion of the price cuts for natural gas imports will essentially occur only with a time-lag in the second half of the year, and finally the sharp expansion in quantitative demand in the first few months of 1986 will result in a correspondingly lower demand in the coming months. If it is assumed that the international oil price, calculated on a dollar basis, will more or less remain at the level it reached in mid-1986 until the end of this year and that the Deutsche Mark-dollar rate will not show any major fluctuations in the next few months, Germany's overall energy imports in 1986 would come to about DM 50 billion in terms of value, or to roughly 2.5 % of the gross national product (against, as noted, 5.2 % in 1985). A slight real increase in energy imports against the preceding year would be included.

However, total relief on Germany's balance of payments is not quite as great as energy imports alone suggest because Germany exports energy sources on a small scale, mainly mineral oil products and coal. For energy exports, too, the value will decrease owing to the price decline (from DM 16 billion in 1985 to, say, close on DM 10 billion in 1986). The deficit on the external energy account in which exports and imports of energy are offset against each other, given the above-mentioned assumptions, is likely to fall from almost DM 80 billion in 1985 to roughly DM 40 billion and thus halve.

Fall in energy prices and German current account

This improvement in the external energy account will crucially change Germany's current account. Owing to the fall in oil prices (calculated in Deutsche Mark) a sharp increase in the current account surplus is to be expected at first; in the other oil-importing countries, too, a corresponding improvement in the current account is to be anticipated. But for this improvement in the energy account, the surplus on Germany's external current transactions would presumably decrease in 1986. Outside the energy sector, there are factors which already imply a correction of the large cur-

rent account surpluses and which include not least the "secondary effects" of the oil price decay on the imports and the exports sides.

The oil price and exchange rate-induced fall in import prices for sources of energy contributed to the stabilisation of domestic consumer prices. This leads to real income gains in Germany which – after an adjustment phase – will ultimately stimulate domestic economic activity, and in particular private consumption, considerably. The shift of economic stimuli from foreign demand to domestic expansionary forces will therefore intensify. As usual, part of the additional real income will flow into imports – either in the form of increased demand for foreign goods or in the form of higher travel expenditure by German tourists abroad. Thus not all of the savings from energy imports will remain in Germany; some will benefit our partner countries through an increase in real imports.

It is not quite as clear how exports might respond to the reduction in energy prices. On the one hand, an expansionary impetus is generally expected in the oil-importing countries, so that real world trade and international economic activity will probably be stimulated by the decline in energy prices. For the German export industry it is therefore expected that demand from the industrial countries will tend to pick up. On the other hand, the underlying position is expected to deteriorate owing to the fall in oil prices on individual regional markets, which are of considerable importance at least for particular export industries. According to OECD estimates, the aggregated current account deficit of all OPEC countries alone will rise from US\$ 13 billion in 1985 to about US\$ 50 billion this year. The smaller oil production by the OPEC countries in conjunction with the lower prices and the associated lower export proceeds have already resulted in a distinct decline in imports by this group of countries; German exports to the OPEC countries, which account for close on 5% of Germany's total exports, decreased again by 27% in the first five months of this year against the preceding year, after having fallen since 1983. But other oil-producing countries outside the OPEC, too, like the USSR, have to reckon with considerably lower foreign exchange proceeds and will tend to reduce their purchases from abroad. In particular, for the German export industry large-scale orders for complete industrial plant from the oil-producing coun-

tries will largely fail to materialise. The impact on German export trends is therefore not inconsiderable. If the shares of those countries which obtain a large part of their export proceeds from petroleum business (Mexico, USSR, United Kingdom and Norway) are added to the share of the OPEC countries in German exports, 17 % of all German exports are accounted for by these countries. Even if certain risks for German export business are to be found here, it is in all to be expected that the stronger growth in most industrial countries and in the oil-importing developing countries will on balance support foreign demand.

In the following article on the external part of the Bundesbank's econometric model an attempt is made to quantify the effects on the German economy of the fall in oil prices which has occurred since the end of 1985. At the same time, the effects of the most recent depreciation of the dollar are investigated, not only with regard to the external energy account, but also to their macro-economic significance. The analysis of the econometric scenario is more comprehensive than the statements in this contribution; essentially it arrives at the same conclusion, namely that through the – somewhat stronger – continuation of economic growth an adjustment process has been initiated which will considerably reduce the current account surplus not only in "real" terms (as has been discernible so far), but after some time in nominal terms as well.

External influences on the current account and domestic trends in the econometric model of the Deutsche Bundesbank

Trends on the international foreign exchange and raw materials markets over the last few months have shown once again to what extent economic developments in the Federal Republic of Germany depend on external influences. Germany has close ties with the economies of other countries through the exchange of goods and services and through capital transactions. In 1985 the share of the gross national product taken by exports of goods and services was 35 %, and financial transactions are also increasingly settled through the international financial markets.

After the transition to floating at the beginning of the seventies, the exchange rates of major currencies sometimes showed strong fluctuations, particularly in relation to the US dollar, and these could not easily be explained by fundamental economic factors. Thus in the period from 1980 to the start of 1985, there was a strong depreciation of the Deutsche Mark against the dollar, although prices in Germany rose less than in the United States and the US current account went strongly into deficit. From spring 1985 to the same time this year, the overvaluation of the dollar decreased. The rise in its value and the subsequent normalisation have, however, left their mark on trends in German foreign trade.

Both fluctuations in exchange rates and trends on the oil markets have strongly influenced international economic relations. After world market prices of crude oil had dropped from their high of US\$ 36 per barrel at the start of 1981 to US\$ 29 per barrel in spring 1983, the dollar price for oil stayed at the high level it had reached for several years; as from the beginning of 1986 there followed the oil price collapse. In June 1986 the spot market price for crude oil from the Brent field was only about US\$ 12 per barrel.

The fall in the dollar rate and the oil price have both been supporting the price stabilisation process which of late has already made fairly substantial progress in some industrial countries. Both „imported stability progress“ and the external factors named exert a positive influence on real demand and thus on overall economic growth in the oil-importing countries. On the other hand, the lower oil prices and the higher external value of the Deutsche Mark are suppressing demand in other countries for German products and allow larger volumes of deliveries into Germany. To be able to

assess the effects of such processes, including the opposite effects on the current account, growth, employment and prices which result from them, it has proved helpful to consult the results of an econometric model which attempts to portray the effects in relation to global economic aggregates – such as gross national product, price level, balance on current account.

Analysis of external influences with the Bundesbank model

The Bundesbank uses its overall econometric model for such analyses, and various Monthly Reports of the Bundesbank have discussed its construction and applications.¹ The version of the model last described in these Reports, that of July 1982, has been adjusted numerous times in line with economic trends. This restructuring serves to take account of changed patterns of behaviour and economic processes and enables new questions to be investigated. A focal point of the further development of the model has been Germany's external relations.²

The external part of the Bundesbank model explains the various components of the current account (real foreign trade and foreign trade prices) and exchange rate trends as they depend on prices, interest rates, demand variables, etc.

The econometric model describes firstly Germany's *trade relations* with foreign countries. Real imports, which are classified in four different groups of goods, depend on domestic demand and on the relationship of import prices to domestic prices. Real exports, which can also be viewed as imports by foreign countries, are specified in a similar fashion: they are explained by foreign demand and by the relationship of export prices to price trends abroad. In turn, import prices are influenced by price trends abroad and on world markets and by exchange rate movements, while export prices are determined by cost trends at home, by foreign demand and by trends in competitors' prices abroad.

In addition, *exchange rate* trends are explained in the model. The weighted exchange rate, i.e. the external value of the Deutsche Mark against the currencies of 14 countries, is divided up into three components: the external value of the Deutsche Mark against the US dollar (with a weighting of

14%), the external value of the Deutsche Mark against the EMS currencies (with a weighting of 48%) and the external value of the Deutsche Mark against other currencies (with a weighting of 38%).³ While exchange rates against the EMS currencies are essentially determined by exchange rate adjustments in the EMS, an attempt has been made to explain both the other external value components by behavioural equations in the model. Their development depends largely on the following factors: the interest rate differential between Germany and abroad, the inflation differential between Germany and foreign countries and the rate of change in the net assets position against foreign countries (cumulative current account balance). According to the model, exchange rates react to current account disequilibria (an improvement on current account leads to appreciation effects), tend to adjust to changed interest rate differences and orient themselves long-term on purchasing power parities, with an "overshooting" or "undershooting" of exchange rates with respect to their long-term equilibrium values being possible and indeed having occurred in the case of the dollar rate. However, residual fluctuations remain, which cannot be explained by the fundamental economic factors mentioned.

Germany's external relations are thus strongly and independently determined by economic trends abroad or, more exactly, by trends in countries which are particularly important for Germany economically, i.e. these countries' overall economic growth, their foreign trade, their exchange rates and their price trends, price trends on the world markets and international interest rate movements.

Changes in Germany's current account vis-à-vis the rest of the world, which – as outlined above – are explained in the model, are reflected in turn in domestic economic trends. Thus when energy imports become cheaper, this damps down price trends at home and promotes real economic growth. Higher growth in Germany generates higher imports, whereas the dampening-down of domestic price and cost rises improves the competitive position against the rest of the world and thus has a favourable effect on exports.

It is of importance for economic policy that the domestic and external adjustment processes set off by changes in external economic data generally

¹ See: "Structure and results of the econometric model of the Deutsche Bundesbank" in Monthly Report of the Deutsche Bundesbank, Vol. 27, No. 5, May 1975, p. 26, "Further development of the econometric model of the Deutsche Bundesbank" in Monthly Report of the Deutsche Bundesbank, Vol. 30, No. 4, April 1978, p. 22, and "Structure and properties of a new version of the econometric model of the Deutsche Bundesbank" in Monthly Report of the Deutsche Bundesbank, Vol. 34, No. 8,

August 1982, p. 29.

² Interested parties can obtain on request a documentation of the new version of the Bundesbank model.

³ The construction of the external value of the Deutsche Mark is described in detail in "New calculation of the external value of the Deutsche Mark and foreign currencies" in Monthly Report of the Deutsche Bundesbank, Vol. 37, No. 1, January 1985, p. 38.

26 occur over a fairly long period, so that at the outset there is often disappointment about weak initial reactions. How these dynamic interdependences between the domestic and foreign sectors are specified in the Bundesbank's econometric model can be seen from the two examples discussed below.

The assumptions of an external scenario analysis for 1986

The global economy has been subject to two shocks within the space of a few years as the result of sharp price rises for crude oil, an important raw material and source of energy.⁴ Currently, the global economy is experiencing the effects of a new type of oil crisis, namely a dramatic fall in oil prices. The decay in prices occurred at a time when the dollar was depreciating strongly on the international foreign exchange markets, so that the fall in oil prices was even larger in the currencies of the consumer countries, leaving aside the United States. The effects of oil price rises and reductions are not necessarily symmetrical; a lot also depends on economic policy reactions in each case. But if weakened growth and inflation – i.e. stagflation effects – were ascribed to the immense price hikes of the last decade, the opposite can be expected from the most recent price reductions: more stable prices and higher real growth. The influences that the most recent exchange rate and oil price changes can be expected to have on economic trends in Germany are investigated below using a so-called scenario analysis with the Bundesbank model.

In a base line simulation with the model for 1986 it was assumed that *oil prices* on an average for 1986 will have remained as high as in the last few months of 1985, whereas in the alternative run they were nearly halved (from over US\$ 28 per barrel on an annual average for 1985 to US\$ 15 per barrel in 1986). Basically, two influences stemming from the fall in oil prices have to be distinguished: the direct effect of oil prices on domestic economic trends and the indirect effect which results from oil prices changing global production and the international level of prices. In the Deutsche Bundesbank's model, the feedback effects on the global economy are not taken into account. As they are, however, considerable, additional assumptions about the effects had to be made. To this end, the assumption was made, in a fashion similar to that

Assumptions of the scenario analysis for 1986

Change from previous year in %

Item	Base run	Alter- native run	Difference
World market prices for energy raw materials	– 0.2	– 47.2	– 47.0
Wholesale prices of selected countries	+ 0.9	+ 0.4	– 0.5
Industrial output of selected countries	+ 1.5	+ 2.0	+ 0.5
US dollars in Deutsche Mark	– 11.5	– 23.5	– 12.0

BBk

found in the investigations of international organisations, that production abroad this year will rise half a per cent faster and external prices half a per cent more slowly than would have been the case without the oil price fall.

In the base run of the model – the original, against which the newer trends are to be measured – a *dollar rate* of about DM 2.60 was assumed. This is in line with the rate which had been reached in the last few months of 1985. Thus the dollar rate in the base line simulation is already 11 ½% under the average for 1985. For the alternative run, on the other hand, a dollar rate of DM 2.20 to 2.30 was assumed, a rate which has held for nearly five months now. The assumptions made in the alternative run for the external value of the Deutsche Mark against EMS and other currencies did not deviate from those in the base line simulation. For the sake of simplicity it was assumed that these currencies behave in the same way against the dollar as does the Deutsche Mark.

Whereas attempts were made to counter the first oil price shock in many countries by means of expansionary *fiscal and monetary policies*, the predominant view during the second oil price crisis was that the inflationary effects could best be checked by a non-accommodating policy stance. At present, the economic policy course taken hitherto is largely being maintained to allow impulses from energy price cuts to have their full effect. However, some countries have raised taxes on mineral oil and mineral oil products for budgetary or environmental policy reasons. As far as foreign countries are concerned, effects of this type have probably already been taken into consideration in the above-mentioned international demand and price effects. For Germany the assumption was made that monetary and fiscal

⁴ For the effects see "The impact of the second oil price shock on the economy of the Federal Republic of Germany (an econometric analysis)" in Monthly Report of the Deutsche Bundesbank, Vol. 33, No. 4, April 1981, p. 13.

policy – leaving aside the raising of the so-called “coal penny” – is being continued unchanged on a path which has a medium-term gearing.

Effects of the most recent fall in oil prices and the dollar rate

The effects which the fall in oil prices and the further depreciation of the dollar can be expected to have this year on the German current account and domestic trends can be calculated from the differences between the base run and the alternative simulation. The differing effects of energy price reductions and changes in exchange rates can also be separated out. In the base line solution, which is based on an unchanged oil price and a dollar rate such as obtained in the last few months of 1985, a dynamic upward trend in the German economy in the current year is described. The results of the base run, however, are not explained in any more detail here. What is of interest in the discussion below is what influences the most recent trend in oil prices and the dollar rate, which was not foreseeable at the beginning of the year, are having on overall economic developments in 1986.

The depreciation of the US dollar against the Deutsche Mark, which has taken place in the last few months, contributes through cheapened imports, particularly of raw materials and sources of energy, to restraining inflation at home. But on the other hand it also restrains real exports to a certain extent. However, with the massive fall in crude oil prices, impulses were released in the course of the first few months of 1986 which checked this influence and will probably have very positive effects on the energy account and overall economic trends in the current year.

The influence of the oil price reductions on the overall energy account and on the *current account* are investigated in detail in the article “Fall in oil prices and the external energy account of the Federal Republic of Germany” (see page 17). According to that article energy imports are estimated to decrease in 1986 against the preceding year by DM 45 billion. As the dollar rate of the Deutsche Mark fell markedly in the course of last year, some of the relief was already predictable at the start of 1986. This is why in the base line solution of the scenario analysis conducted here there is a reduction in the energy bill against 1985. If only the most recent

trend is used, calculations show that on this score alone there is a fall in energy imports of DM 35 billion. While the other imports also turn out lower in nominal terms than in the base line solution, especially as a result of their cheapening owing to exchange rate movements, exports remain noticeably below their base run trend. These two effects, however, do not fully cancel out, so that the current account surpluses in the final analysis are estimated at DM 30 billion higher than in the base line solution.

On the model simulations, the most recent oil price reductions and dollar depreciations underlying the scenario analysis lead to import prices falling 8½% more strongly than in the base run. As export prices also decrease, an improvement in the terms of trade of 7½% can be expected in

28 1986. Although real imports, and among them energy imports especially, rise more rapidly as a consequence of the fall in costs, nominal imports drop by 7½% against the base line simulation. Moreover, real exports are also somewhat above their base run trend. Whereas nominal current account surpluses, as mentioned, increase by DM 30 billion, the real surpluses fall by a good DM 7 billion against the base line solution.

The considerable cheapening of imports, which is associated with the most recent trend on the oil and foreign exchange markets alone, will restrain the trend in *consumer prices* in the current year by a total of about 1%, whereas total domestic prices for consumer and capital goods will react somewhat more weakly. The GNP deflator, by contrast, will probably go up initially by 1½% more than in the base line run (see the comments on page 5) in connection with the expected terms of trade effect, i.e. with the change in the relationship between prices of imports and exports. The rise in real incomes, which is associated with the moderation of consumer prices, will lead gradually in the course of 1986 to a rise in private consumer demand. This should result in additional real growth in domestic demand of an estimated 0.7%. As imports increase much more strongly, in real terms, than exports and the surplus on trade and services accounts consequently falls noticeably in real terms, the positive effects on total real growth which derive from the marked cheapening of energy imports do, however, remain limited. The terms of trade gains to be expected temporarily improve enterprises' earnings, in particular, whereas nominal wage incomes react only with a time-lag.

Overall, the scenario analysis which has been carried out shows that the price rise at home can be expected to undergo marked restraining influences generated by the recent oil price falls and the latest dollar depreciation. This progress in stability could, however, turn out to be temporary if domestic costs continue to go up more quickly than prices. The braking effects on the *growth in overall demand*, which are associated with the depreciation of the US dollar and the consequent retreat in export demand and real net exports of goods and services, will probably be more than compensated by the positive influences which cheaper energy imports will have on domestic demand. To this extent, the most recent trend on

the energy and foreign exchange markets will contribute to economic upswing forces not only shifting increasingly from abroad to the domestic scene, but to them having a generally stimulating effect on overall output and employment. The model simulations thus reveal that the positive assessment to date of economic trends in the current year receives additional support from the fall in oil prices and the exchange rate changes of the last few months, in the final analysis. An extrapolation of the model simulations beyond the end of 1986, for which admittedly the necessary assumptions (oil price, dollar rate, etc.) are more uncertain, shows that the adjustment process continues for the foreign trade flows and that the longer this goes on, the more clearly there will be a reduction in the nominal current account surplus.

with other countries. — 5 Including capital and reserves of the Bundesbank. — 6 Balance of the remaining items of the consolidated balance sheet of

the banking system; changes are chiefly due to fluctuations in intra-bank items in course of settlement, in profit and loss accounts, and in interbank

claims and liabilities. — 7 Excluding banks' cash balances, but including DM notes and coins held abroad. — p Provisional. — r Revised.

I. Overall monetary survey

2. Consolidated balance sheet of the banking system *

* Consolidated statistical balance sheet of the banks (excluding assets and liabilities of foreign branches), including the Bundesbank (see Tables II, 1 and III, 2 and 3). — 1 As from September 7, 1983 the Weekly Return of the Bundesbank shows the monetary reserves excluding the counterpart in respect of the valuation of gold and dollar reserves provisionally contributed to the EMCF, previously shown on the liabilities side; this method is

employed in this table for earlier dates as well, so that the external assets and liabilities of the Bundesbank are not fully comparable with the figures given in the Monthly Reports from April 1979 to September 1983. — 2 Including Federal Railways and Federal Post Office. Exception: central bank deposits of the Federal Post Office; see footnote 15. — 3 Including Treasury bills and Treasury discount paper of Federal Railways and Federal Post Office. —

4 Including Treasury bills and Treasury discount paper of the Federal and Länder Governments, excluding mobilisation and liquidity paper. — 5 For treatment of DM claims payable on demand on foreign banks see Table IX, 7, footnote 2. — 6 As from July 1983 including the working capital put at the disposal of foreign branches (see footnote 7). — 7 Including contra-entry to coin circulation. Up to June 1983 including the working capital put at the

* Excluding postal giro and postal savings bank offices. — 1 As from March 1978 excluding the banks' balances of domestic notes and coins, which, from that time on, are deductible from the minimum reserves. — 2 At current reserve ratios, but excluding changes in required minimum reserves resulting from changes in the reserve ratios, which are shown in

item B. — 3 Currency in circulation plus minimum reserves on domestic liabilities at current reserve ratios. — 4 In the current month or the last month of the period. — 5 Effective transaction values, excluding foreign exchange swaps and foreign exchange repurchase agreements. — 6 Including public funds shifted temporarily to the banks (under section 17 of

the Bundesbank Act). — 7 Balance of items in the Bundesbank Return not specified here; changes result mainly from the entries to the Bundesbank's profit and loss account. — 8 Including changes in the minimum reserves due to growth in reserve-carrying foreign liabilities and, up to 1977, including

Bundesbank										D. Covering of remaining deficit (+) or absorption of surplus (-) by			Memorandum items (Average level during month) 4				Period
Open market transactions (net sales: -)					Foreign exchange swaps and foreign exchange repurchase agreements	Shifts of Federal balances to the money market (under section 17 of the Bundesbank Act)	Total (B)	C. Grand total (A plus B) (deficit: -)	Re-course to unused refinancing facilities (reduction: +)	Change in lombard or special lombard loans (increase: +)	Change in "excess balances" (reduction: +)	Unused refinancing facilities 9	Lombard or special lombard loans	Balance of short-term assistance measures on the money market 10 (net claims of the Bundesbank: -)	Seasonally adjusted central bank money stock DM billion 11		
in long-term securities ("out-right transactions")	under repurchase agreements (in trade bills and securities)	in "N paper" with banks	Other open market transactions with non-banks

minor changes in the cash deposit. — 9 Rediscount quotas including limits for money market paper eligible for purchase by the Bundesbank. — 10 Open market operations in securities and trade bills under repurchase agreements, foreign exchange swaps and foreign exchange repurchase agreements,

shifts of Federal Funds under section 17 of the Bundesbank Act and short-term sales of Treasury bills. — 11 At constant reserve ratios (base: January 1974) and excluding bank bonds subject to reserve requirements. — 12 Statistically adjusted. — 13 Statistically adjusted for Federal balances shifted

temporarily to the banks (under section 17 of the Bundesbank Act). — 14 Including the effects of the netting options extended as from May 1986 for foreign currency liabilities and of the inclusion of shorter-term bank bonds in the reserve requirements. — pe Partly estimated.

1 As from September 7, 1983 the "Counterpart in respect of the valuation of gold and dollar reserves provisionally contributed to the EMCF", previously shown on the liabilities side of the Weekly Return of the Bundesbank, is directly deducted from the relevant asset item "Claims on the EMCF"; this method is employed in this table for earlier dates as well, so that the presentation of the claims on the EMCF and the monetary reserves is not fully comparable with the figures given in the Monthly Reports from April 1979 to September 1983. — 2 The Bundesbank's external positions

denominated in \$, ECUs or SDRs are shown at the balance sheet rates of the respective end-of-year dates. — 3 For further breakdown see Table IX, 6 and Statistical Supplements to the Monthly Reports of the Deutsche Bundesbank, Series 3, Table 12. — 4 Prime bankers' acceptances. — 5 Including Equalisation of Burdens Fund and ERP Special Fund. — 6 Resulting from the currency reform of 1948, including non-interest-bearing debt certificate in respect of the currency conversion in Berlin (West); including amounts exchanged for Treasury bills and Treasury

discount paper and sold; see also item "Liabilities arising from mobilisation and liquidity paper sold". — 7 Including foreign securities (as from May 23, 1986: DM 77 million). — 8 Including the items "German coins", "Balances on postal giro accounts" and "Other assets". — 9 Including the balancing item in respect of the valuation adjustment of other foreign currency positions. — 10 Excluding deposits of the Federal Post Office. — 11 Local authorities, local authority associations and social security funds. — 12 For

further breakdown see Table VII, 4 in the Monthly Reports of the Deutsche Bundesbank up to and including November 1982. — 13 As from September 7, 1983 liabilities arising from transfers of ECUs to other central banks, previously set off against claims on the EMCF, are shown in the Weekly Return of the Bundesbank as liabilities to the EMCF; this method is employed in this table for earlier dates as well. 14 In addition, there are several minor special refinancing facilities (see "Kreditpolitische

Regelungen" [monetary policy regulations] published in the German version of the Annual Reports of the Deutsche Bundesbank). — 15 Increase of DM 1.8 billion owing to a valuation adjustment of the external position. — 16 Increase of DM 4.1 billion owing to a valuation adjustment of the external position (see also "The monetary reserves of the Bundesbank as reflected in its Weekly Return", Monthly Report of the Deutsche Bundesbank, Vol. 34, No. 1, January 1982, p. 13). — 17 Increase of DM 7.3

billion owing to a valuation adjustment; DM 3.4 billion of this was transferred to the EMCF in connection with the contribution of the dollar reserves. — 18 Special lombard facility. — 19 Decrease of DM 2.5 billion owing to a valuation adjustment. — 20 Increase of DM 1.2 billion owing to a valuation adjustment. — 21 Including a decrease of DM 1.9 billion owing to a valuation adjustment. — 22 Decrease of DM 0.5 billion owing to a valuation adjustment.

III. Banks

1. Key components of bank assets and liabilities *

DM million

Period	Lending (including acquisition of securities) to domestic non-banks												Equalisation and covering claims	Holdings of securities (excluding bank bonds)	
	Total	Short-term lending				Medium-term lending 2, 3				Long-term lending 2, 4					
		Enterprises and individuals	Public authorities	of which Holdings of Treasury bills and Treasury discount paper 1	Enterprises and individuals 3	Public authorities	Enterprises and individuals 4	Public authorities	Enterprises and individuals 4	Public authorities

* Excluding the assets of foreign branches (see Table III, 10) and of building and loan associations; for credit cooperatives, total survey as from second line for December 1985; partial survey up to first line for December 1985; since the end of 1973 those credit cooperatives are included whose balance sheet total amounted to DM 10 million and more on Dec. 31, 1972, as well as smaller institutions which were subject to reporting requirements on Nov. 30, 1973; see Table III, 22. — Statistical changes of DM 500 million and more

are given separately (increase: +, decrease: —) in the footnotes to the individual tables (here footnote 15 ff.) — 1 Balance sheet total plus endorsement liabilities arising from rediscounted bills, own drawings outstanding, discounted and credited to the borrowers and bills sent for collection prior to maturity from the banks' portfolios. — 2 Excluding claims in respect of savings bonuses. — 3 Including matured bonds, interest and dividend coupons. — 4 Including balances on postal giro accounts and claims in respect

of registered bonds; excluding loans to building and loan associations. — 5 Excluding own issues; excluding registered bonds. — 6 Including securities sold to the Bundesbank in open market transactions under repurchase agreements. — 7 Including loans to building and loan associations. — 8 Treasury bills and Treasury discount paper (excluding mobilisation and liquidity paper). — 9 The purchase of mobilisation and liquidity paper (under sections 42 and 42a of the Bundesbank Act) does not represent lending by banks. —

III. Banks

* Excluding lending by foreign branches (see Table III, 10) and building and loan associations; for credit cooperatives, total survey as from second line for December 1985; partial survey up to first line for December 1985; see Table III, 2. Including lending to building and loan associations. — Statistical changes of DM 500 million and more are given

separately (increase: +, decrease: —) in the footnotes to the individual tables (here: footnote 7 ff.). — 1 Treasury bills and Treasury discount paper (excluding mobilisation and liquidity paper). — 2 As from December 1980 excluding medium-term repayment-extending loans and medium-term loans on a trust basis (see footnotes 4 and 5). —

3 As from December 1980 included in long-term loans on a trust basis. — 4 As from December 1980 including medium-term repayment-extending loans. — 5 As from December 1980 including medium-term loans on a trust basis. — 6 The difference between the two lines for December 1985 is due to the change

* Excluding deposits and borrowing of foreign branches (see Table III, 10) and building and loan associations; for credit cooperatives, total survey as from second line for December 1985; partial survey up to first line for December 1985; see Table III, 2. Including

liabilities to building and loan associations. — Statistical changes of DM 500 million and more are given separately (increase: +, decrease: -) in the footnotes to the individual tables (here: footnote 4 ff.). — 1 Including liabilities arising from registered

bonds. — 2 Including liabilities arising from non-marketable (up to August 1977: from all) bearer savings bonds, savings bank bonds, etc. — 3 The difference between the two lines for December 1985 is due to the change in the reporting require-

Bank savings bonds 2			Savings deposits						Loans on a trust basis	Memo item Liabilities arising from transactions under repurchase agreements (unless shown above the line)	End of year or month

* Excluding lending of foreign branches and of building and loan associations; for credit cooperatives, total survey as from second line for December 1985; partial survey up to first line for December 1985; see Table III, 2, footnote *. Including lending to building and loan associations. — Statistical changes of DM 500

million and more are given separately in footnote 5 ff. (increase: +, decrease: -). — 1 Excluding banks (other than building and loan associations); including financial leasing institutions. — 2 According to the basic classification of the Federal Statistical Office "Services, if rendered by enterprises and the

professions". — 3 Including manufacture of musical instruments, sports equipment, jewellery; photographic and film laboratories. — 4 The difference between the two lines for December 1985 is due to the change in the reporting requirements for credit cooperatives; see Table III, 2, footnote *. —

For footnote * see Table III, 6. — 1 Including bank savings bonds, etc. under the Savings Bonuses and Personal Asset Acquisition Acts. — 2 Discrepancies between level at beginning of period and level at end

of preceding period, and between changes in levels and turnover, are mainly due to changes caused by mergers, etc. — 3 The difference between the two lines for December 1985 is due to the change in the

reporting requirements for credit cooperatives; see Table III, 2, footnote *. — 4 + ca. DM 500 million. — p Provisional.

1 Including postal giro account balances, claims on building and loan associations and claims arising from registered bonds; excluding Bundesbank balances. — 2 Loans under savings contracts and interim and bridging loans. — 3 Including small amounts of loans for purposes other than building. — 4 Including equalisation and covering claims. — 5 Including liabilities to building and loan associa-

tions. — 6 Including small amounts of savings deposits. — 7 Total amount covered by the contracts; only contracts newly entered into, for which the contract fee has been fully paid. Increases in the contractual amount count as new contracts. — 8 For outpayments of savings deposits arising from the allocation of contracts see "Capital paid out". — 9 Including housing bonuses credited. — 10 Only

allocations accepted by the beneficiaries; including allocations applied to settlement of interim and bridging loans. — 11 The amounts already credited to the accounts of savers or borrowers are included in "Amounts paid into savings accounts" and "Interest and repayments received on building loans". — p Provisional.

Source: Bundesverband der Deutschen Volksbanken und Raiffeisenbanken e.V., Bonn. The figures cover the transactions of all credit cooperatives (including those mentioned in footnote 1), whereas in the banking statistics collected by the Bundesbank until November 1985 only the cooperatives subject to reporting requirements were covered (since end-1973 about 2,400, prior to that about 2,000) (see also Table III, 2, footnote *). The figures for June and December are based on a general survey, those for March and September are estimated on the basis of a partial survey by the Bundesverband der Deutschen Volksbanken und Raiffeisenbanken e.V. As from December 1985 the data for all credit cooperatives can be taken from Tables III, 12 and 13 (second line for December). — 1 Including banks affiliated to Bundesverband der Deutschen Volksbanken und Raiffeisenbanken e.V. and not organised in the form of a cooperative, but excluding regional institutions of credit cooperatives. — 2 Excluding loans on a trust basis. — 3 Excluding bank savings bonds. — 4 Including bank savings bonds.

* Excluding postal giro and postal savings bank offices and, up to 1971, excluding building and loan associations; also excluding banks in liquidation, but including banks transferred to the Federal area after 1945. Branches within the meaning of section 24 (1) 7 of the Banking Act handling inpayments and outpayments, i.e. excluding deposit-receiving agencies, exchange offices, commission agencies, branches and representations. Registered offices, second and other registered offices of banks are recorded as branches, if banking business is conducted there. The first branch established by a foreign bank in the Federal area is recorded as a bank in accordance

with section 53 (1) of the Banking Act; all further branches are recorded as branches. Statistical changes have not been noted among the levels, but have already been eliminated among the changes. — 1 In accordance with the List of Banks (form 1035), 12 banks with 457 branches (1984) and 10 banks with 466 branches (1985) are recorded after their reclassification in the category of "Commercial banks"; in the Monthly Balance Sheet Statistics they continue to be shown as "Instalment sales financing institutions" (in 1984 7 "Regional banks" with 446 branches and 5 "Private bankers" with 11 branches; in 1985 7 "Regional banks" with 461 branches and 3 "Private

bankers" with 5 branches). — 2 Including Deutsche Girozentrale — Deutsche Kommunalbank. — 3 Including Deutsche Genossenschaftsbank. — 4 Including other banks not organised in the form of a cooperative but affiliated to Bundesverband der Deutschen Volksbanken und Raiffeisenbanken e.V. — 5 Since 1972 including legally independent (private and public) building and loan associations and their branches. 10 (up to 1972: 9) legally dependent public building and loan associations (divisions or institutions of other public-law banks) with 4 branches are not recorded separately. — r Revised.

* Excluding minimum reserves kept by the Federal Post Office on behalf of the postal giro and postal savings bank offices, which since the introduction on May 1, 1958 of the optional central maintenance of minimum reserves are in practice no longer distinguishable from the other central bank deposits of the Federal Post Office. — 1 In accordance with sections 5 to 7 of the Minimum Reserves Order. — 2 Liabilities subject to reserve requirements cannot be broken down statistically according to residents and non-residents if the same reserve ratios applied to such liabilities and only overall amounts were reported. — 3 As from May 1986 including the liabilities arising from initial sales to non-residents of bearer bonds

and order bonds forming part of a total issue. — 4 Amount after applying the reserve ratios to liabilities subject to reserve requirements (section 5 (1) of the Minimum Reserves Order). Owing to the introduction in March 1978 of deductible cash balances, accompanied by a compensatory increase in reserve ratios, the continuity of the series is not assured. — 5 Banks' holdings of German legal tender pursuant to section 5 (2) of the Minimum Reserves Order. — 6 To be maintained as credit balances on giro accounts at the Bundesbank. — 7 Average credit balances of banks subject to reserve requirements maintained on giro accounts at the Bundesbank. — 8 Actual reserves less required reserves after

deduction of deductible cash balances. — 9 Required reserves after deduction of deductible cash balances. — 10 Between May 1961 and end-December 1966 liabilities to non-residents were exempt from the reserve requirements to an amount equal to credit balances with banks abroad and foreign money market investments. — 11 The exemption of institutions mainly engaged in long-term business and of building and loan associations was abolished with effect from January 1, 1984. — 12 Required reserves prior to deduction of deductible cash balances as % of liabilities subject to reserve requirements.

Special interest rate charged for failing to comply with the minimum reserve requirements: 3 % p.a. above lombard rate 4

1 This is also the rate for cash advances. Until May 1956 lower rates likewise applied to foreign bills and export drafts; fixed special rates were charged for certain credits which had been granted to the Reconstruction Loan Corporation and which ran out

at the end of 1958 (for details see footnotes to the same table in the Report of the Deutsche Bundesbank for the Year 1961, page 91). — 2 An allowance of 3/4 % per annum was granted to the banks in respect of the lombard loans taken between December 10,

1964 and December 31, 1964. — 3 Lombard loans were generally not granted to the banks at the lombard rate during the following periods: from June 1, 1973 to July 3, 1974 and from February 20, 1981 to May 6, 1982. — 4 Unchanged since January 1, 1951.

* Money market rates are not fixed or quoted officially; the monthly averages computed from daily quotations are un-weighted. — 1 Frankfurt interbank offered rate; ascertained daily at 11 a.m. by Privatdiskont AG on the basis of selling rates reported by banks in Frankfurt am Main, Munich and

Düsseldorf (for the first time on August 12, 1985). — 2 At the end of December: 5.5% to 9%. — 3 At the end of December: 3% to 6.0%. — 4 The highest rates are estimated rates.

* For method of data collection see Monthly Report of the Deutsche Bundesbank, most recently Vol. 35, No. 1, January 1983, page 13 ff. Average rates are calculated as unweighted arithmetic mean from interest rates reported to be within the spread. The spread is ascertained by eliminating 5% each of the reports containing maximum and minimum interest rates. — 1 Second and third weeks of the months indicated. — 2 Interest rates as % p.a. — 3 As from June 1986 bills of less than DM 100,000 eligible for

rediscount at the Bundesbank. — 4 Interest rates as % per month of original amount of credit. Besides interest most banks charge a non-recurring processing fee (generally 2%, in some cases 3%, of the credit amount). — 5 As from June 1986 DM 5,000 and over but less than DM 15,000. — 6 With maturities of over 24 months but not more than 48 months. — 7 The figures refer to the time when the contract was concluded and not to the entire duration of the contract. The calculation of the effective interest rate

is based on an annual redemption rate of 1% plus interest saved; the repayment conditions agreed upon in each case by the banks involved are taken into account (mostly quarterly payment with annual inclusion or monthly payment with monthly or quarterly inclusion). — 8 As from June 1986 with agreed period to maturity of 1 to 3 months. — 9 As from June 1986 DM 100,000 and over but less than DM 1 million. — 10 As from June 1986 data collection discontinued. — p Provisional.

1 As from May 9, 1985 floating discount rate geared to the rate for 3-month Treasury bills. — 2 The rate at which the Danmarks National Bank provides central bank money against rediscountable CDs. — 3 The rate at which the Banque de France purchases short-term paper. — 4 As the banks are not normally indebted to the central bank, the discount rate is at

present not used for controlling the interest rate level. — 5 The rate at which the Bank of England purchases bills (running up to two weeks) within band 1. — 6 Short Term Facility rate: rate at which the central bank grants the commercial banks short-term credit. — 7 The rate at which the Neder-

landsche Bank provides (against collateral) the larger part of its central bank money. — 8 As from March 13, 1980 floating discount rate (average weekly Treasury bill tender rate plus ¼ percentage point). The rate applying about one month earlier is also stated for comparative purposes.

* Excluding securities from pre-currency-reform issues and old savers' securities. — 1 Excluding registered bank bonds. — 2 Including ship mortgage bonds. — 3 Including Kommunalschatzanweisungen, Landesbodenbriefe, Bodenkulturschuldverschreibungen, bonds issued to finance shipbuilding and guaranteed by local authorities as well as bonds with other designations, if they were issued under section 8 (2) of the Act on Mortgage Bonds and Similar Bonds of Public-Law Banks. — 4 This includes all bearer bonds of the following banks: AKA-Ausfuhrkredit-Gesellschaft mbH, Bayerische Landesanstalt für Aufbaufinanzierung, Deutsche Genossenschafts-

bank, Deutsche Siedlungs- und Landesrentenbank, Industriekreditbank AG — Deutsche Industriebank, Kreditanstalt für Wiederaufbau (RLC), Landwirtschaftliche Rentenbank, Deutsche Ausgleichsbank (formerly: Equalisation of Burdens Bank) and building and loan associations. — 5 This item principally contains bonds of regional giro institutions, the proceeds of which are, in the main, extended as credit to trade and industry. Also including "unsecured" mortgage bonds, bearer bonds (including convertible bonds and option bonds) issued by banks, and marketable savings bonds. — 6 Including convertible and option bonds issued by industrial borrowers. — 7 Including

Federal Railways and Federal Post Office, but excluding bonds issued on behalf of the Equalisation of Burdens Fund. — 8 Issued under domestic syndicate leadership. — 9 Gross sales means only initial sales of newly issued securities, not however resales of repurchased bonds. The figures include those cases of security sales where the buyer, for reasons connected with printing or for other reasons, has not received physical securities. — 10 Gross sales less redemptions; the minus sign indicates an excess of redemptions over the amount newly sold during the period under review. Discrepancies in the totals are due to rounding.

1 Bearer bonds with maximum maturities according to the terms of issue of over 4 years, if their mean remaining maturities exceed 3 years. Convertible bonds and the like, bank bonds with unscheduled redemption, zero bonds, floating rate notes and foreign currency bonds of domestic issuers are not included. Group yields for the various categories of

securities are weighted with the amounts outstanding or (in the case of issuing yields) the amounts sold of the bonds included in the calculation. Monthly figures for yields on bonds outstanding are calculated on the basis of the yields on the four bank week return dates of a month (including the yields on the last day of the preceding month); as from 1986 they

are calculated on the basis of the yields on all the business days of a month. The annual figures are the unweighted means of the monthly figures. — 2 As far as quoted on German stock exchanges. — 3 Dividend yield; end of year or month. Source: Federal Statistical Office.

VI. Capital market

7. Liquid funds and investments of insurance enterprises *

DM million

End of month	Number of enterprises covered	Total assets covered	Liquid funds 1 (except time balances with banks)	Time balances with banks 2	Investments (except time balances with banks)

* As from the Monthly Report of September 1984 this table shows receipts and expenditure no longer at the time of the cash inflows and outflows but under the period for which they are intended, in accordance with budgetary practice. The definition used here differs from the methods employed for the government account of the national accounts and, in the case of the quarterly figures, in some respects also from the financial statistics. — 1 Federal Government, Länder Governments, local authorities, municipal special-purpose associations, Equalisation of Burdens Fund, ERP Special Fund and EEC shares. The quarterly figures, unlike the annual figures based

on the annual accounts statistics of the Federal Statistical Office, do not include municipal special-purpose associations, hospitals keeping commercial accounts and various special accounts. — 2 Statutory pension insurance funds, Federal Labour Office, statutory health insurance and accident insurance institutions, agricultural old-age pension funds, and supplementary pension funds for government employees. The annual figures differ from the sum of the quarterly figures as the latter are all provisional. The quarterly figures for some fields of insurance are estimated. — 3 After adjustment for

payments by the central, regional and local authorities to the social security funds. — 4 Including discrepancies in clearing transactions between the central, regional and local authorities. — 5 Expenditure on investment grants, loans and acquisition of participations. — 6 Including Federal Government liquidity assistance to the Federal Labour Office. — 7 Excluding municipal special-purpose associations and excluding supplementary pension funds for government employees. — pe Partly estimated. Discrepancies in the totals are due to rounding.

1 The cash transactions recorded as cash receipts and expenditure concern payments into and out of the accounts kept with the Bundesbank by the Federal Government. The cash receipts and outgoings differ from those in the official financial statistics primarily because they are recorded not at the time they are entered in the

budgetary accounts but at the time of the actual receipt or outpayment and because transactions on behalf of the European Communities, which are entered not in the Federal budget but in appendices thereto, are settled through the accounts of the Federal Government. — 2 Including small amounts of special

transactions. — 3 Cash balance = column (a) less (b) less (c) less (d) less (e) less (f). — 4 Deposits with the Bundesbank and other credit balances. — 5 Up to June 1981 only items in course of settlement with the Equalisation of Burdens Fund; thereafter, in general only redemptions in course of settlement.

1 This total, unlike that in Table VII, 4, includes neither the revenue from Equalisation of Burdens levies, trade tax on returns and capital (less Federal and Länder shares in trade tax), tax on total wages paid, the taxes on land and buildings and other local authority taxes, nor the balance of untransferred tax shares. — 2 The yield of wage tax and assessed income tax was distributed among the Federal

Government, the Länder Governments and the local authorities in the ratio of 43:43:14 as from 1970 and in the ratio of 42.5:42.5:15 as from 1980, and the yield of corporation tax and investment income tax between the Federal Government and the Länder Governments in the ratio of 50:50 as from 1970. — 3 The Federal Government's share: 70 % in 1970, 68.25 % in 1975, 67.5 % in 1980, 66.5 % in 1983, 65.5 % in 1984 and

1985, 65 % in 1986; the remainder went to the Länder Governments. As from 1975 the EEC share must be deducted from the Federal Government's share stated. — 4 Federal Government and Länder Governments 50 % each. — 5 For breakdown see Table VII, 6. — 6 Including DM 109 million of levies on defence imports. — p Provisional.

* Excluding public authorities' mutual indebtedness. —
 1 Excluding bonds in the issuers' portfolios. —
 2 Mainly loans against borrowers' notes. Including loans raised abroad. — 3 Including Debt Register claims and Federal savings bonds. — 4 Commutation and compensation debt and old debt mainly expressed in foreign currency in accordance with the

London Debts Agreement; excluding own portfolio. —
 5 In this table (unlike Table VII, 9) the Public Works Corporation and the Equalisation of Burdens Fund are included in the Federal Government debt as from 1970, and not as from 1972 and 1980 respectively. —
 6 Including DM 387 million of special Bundesbank credit to the Federal Government. — 7 In 1970 and

1975 including small amounts of tax reserve certificates. — 8 As from 1978 including net borrowing for the Housing Promotion Institution of the Land of North Rhine-Westphalia. — 9 Data other than end-of-year figures have been estimated. Including indebtedness of municipal special-purpose associations (as from 1975) and municipal hospitals. — p Provisional.

1 Special trade according to the official foreign trade statistics: imports c.i.f., exports f.o.b. — 2 Mainly warehouse transactions for account of residents and deduction of goods returned and of commission processing. — 3 Excluding expenditure on freight and insurance costs included in the c.i.f. import value. — 4 The figure for the last month is provisional and excludes trade credits, changes in which are included in the balance of unclassifiable transactions until they

are recorded under short-term capital transactions. — 5 Net errors and omissions on current and capital accounts (= balancing item). — 6 The figure for the last month includes trade credits. — 7 Counterpart of changes in the Bundesbank's external position which are not due to external current and capital transactions: changes in the Deutsche Mark value of the Bundesbank's assets and liabilities denominated in foreign currencies owing to the valuation adjustment

at the end of the year and the allocation of IMF special drawing rights; as from 1982 also the differences between the transaction values and the changes in the external position shown in the Weekly Return at balance sheet rates. — 8 As from 1982 valued at balance sheet rates; see Monthly Report of the Deutsche Bundesbank, January 1982, p. 13. — p Provisional. Discrepancies in the totals are due to rounding.

* Increase in assets and decrease in liabilities: -; decrease in assets and increase in liabilities: +. — 1 Including investment fund units. — 2 At the time of issue, excluding shares of foreign syndicate members. — 3 As defined by the DAC. — 4 Mainly private real estate and Federal Government participations in international organisations. — 5 Mainly

shares in private limited companies. — 6 Including bonds of the Federal Railways and Federal Post Office. — 7 The transaction values shown here are mainly derived from changes in totals. As far as possible, purely statistical changes have been eliminated. The transaction values of the balance of payments in short-term capital transactions may

therefore deviate from the changes in totals in Tables IX, 7 and 8. — 8 Terms of payment and down payments for goods and services, including the long-term assets and liabilities which cannot be shown separately; the latest month's figures are not yet available. — p Provisional. Discrepancies in the totals are due to rounding.

IX. Foreign trade and payments

6. External position of the Bundesbank*

* Valuation of the foreign currency positions at the end of the year at balance sheet rates in accordance with the principles of the Companies Act; until end-1981 these levels were updated in the course of the year at transaction values. As from 1982 valuation at balance sheet rates in the course of the year as well. — 1 Mainly US dollar assets. — 2 For break-

down see Table (b). — 3 European Monetary Cooperation Fund. — 4 Including mobilisation and liquidity paper sold to foreigners by the Bundesbank (see sections 42 and 42a of the Bundesbank Act). — 5 Comprising subscription payments in cash and Deutsche Mark callings by the IMF to finance its sales of Deutsche Mark (net) to other countries. —

6 Resulting from the provisional contribution of gold and dollar reserves and from transfers from other central banks. — 7 Assets resulting from the very short-term financing and short-term monetary support. Discrepancies in the totals are due to rounding.

7. External assets and liabilities of domestic banks *

(excluding the Bundesbank)

* Excluding the external assets and liabilities of the foreign branches of domestic banks. Statistical increases and decreases have not been eliminated; the assets also include banks' long-term external assets changes in which are ascribed to official capital transactions in the balance of payments. To this extent the changes in totals are not comparable with the figures shown in Table IX, 5. Assets and liabilities in foreign currencies are normally valued at

middle rates. — 1 Including the respective international organisations. — 2 For Deutsche Mark claims payable on demand the level at the end of the previous year is used for accounting reasons; including foreign bills acquired as a money market investment. — 3 Including foreign Treasury bills and Treasury discount paper; between November 1972 and August 1983 only a few small holdings were

reported. — 4 As from June 1982 including the working capital of the foreign branches of domestic banks (DM 1.6 billion). — 5 Including repurchase commitments (which do not have to be shown in the balance sheet); for lack of detailed records they are assigned to the foreign banking sector. — 6 Including the working capital of the branches of foreign banks. — p Provisional. — r Revised.

8. External assets and liabilities of domestic enterprises *

(excluding banks)

Difference between buying and selling rates and middle rate, in Deutsche Mark								
	0.0040	0.0040	0.060	0.080	0.080	0.0015	0.020	0.100

* Calculated from daily quotations. Figures on average rates for previous years and on daily rates are to be found in the Statistical Supplements to the Monthly Reports of the Deutsche Bundesbank,

Series 5, The currencies of the world. These Supplements include a table on the daily exchange rate movements of the US dollar. — 1 In accordance with a decision of the governing committee of the

Frankfurt stock exchange, the exchange rate of the lira is to be fixed with four digits after the decimal point as from May 1985.

10. External value of the Deutsche Mark*

End-1972 = 100 1

Yearly or monthly average	External value of the Deutsche Mark 2															Real external value of the Deutsche Mark (measured by consumer prices) 5	
	against the US dollar	against the currencies of countries participating in the European Monetary System (EMS)							against the currencies of other countries					against the currencies of the countries participating in the EMS 4	Total (14 industrial countries)

* For method of calculation see the article "New calculation of the external value of the Deutsche Mark and foreign currencies", Monthly Report of the Deutsche Bundesbank, Vol. 37, No. 1, January 1985. — 1 The figures for end-1972 are in principle based on the central rates at the time, but in the case of the pound sterling, the Irish pound and the Canadian dollar, whose exchange rates were floating, the market

rates of end-1972 were taken as a basis. — 2 The indices for the groups of countries are weighted geometric means of bilateral nominal external values. — 3 The United Kingdom has not so far participated in the exchange rate mechanism of the European Monetary System. — 4 Excluding the United Kingdom and Greece which are not participating in the

exchange rate mechanism. The EMS did not come into force until March 13, 1979. For the time prior to this date the weighted external value vis-à-vis the same group of countries is shown. — 5 Weighted external value against the currencies of 14 industrial countries after adjustment for differences in the rate of price rises (geometric mean). — p Provisional.

IX. Foreign trade and payments

11. External value of foreign currencies *

* For method of calculation see the article "New calculation of the external value of the Deutsche Mark and foreign currencies", Monthly Report of the Deutsche Bundesbank, Vol. 37, No. 1, January 1985. — 1 The figures for end-1972 are in principle based on the central rates at the time, but in the case of the

pound sterling, the Irish pound and the Canadian dollar, whose exchange rates were floating, the market rates of end-1972 were taken as a basis. — 2 The indices of the nominal external value of foreign currencies are weighted geometric means and relate

to the same group of countries as the calculation of the external value of the Deutsche Mark. — 3 The United Kingdom has not so far participated in the exchange rate mechanism of the European Monetary System.

List

of the subjects dealt with during the past twelve months in the Monthly Reports of the Deutsche Bundesbank

- July 1985 Freedom of Germany's capital transactions with foreign countries
Trends in tax revenue since the beginning of the eighties
- August 1985 The profitability of German banks in 1984
Enterprises' profitability, financial strength and liquidity
The financial relations of the Federal Republic of Germany with the European Communities since the beginning of the eighties
The present state and future development of the automation of cashless payments at the Bundesbank
- September 1985 The economic scene in the Federal Republic of Germany in summer 1985
- October 1985 Enterprises' capital formation and financing in the first half of 1985
Recent developments with respect to the Bundesbank's securities repurchase agreements
The longer-term trend of inflows of funds to banks
- November 1985 Enterprises' profitability and financing in 1984
Recent trends in securities transactions with foreign countries
- December 1985 The economic scene in the Federal Republic of Germany in autumn 1985
- January 1986 Monetary target for 1986 and revision of the minimum reserve regulations
The burden imposed by social security contributions since the beginning of the seventies
The foreign travel account of the Federal Republic of Germany
- February 1986 The economic scene in the Federal Republic of Germany at the turn of 1985-86
The balance of payments of the Federal Republic of Germany in 1985
- March 1986 New monetary policy measures
Overall economic trends and the earnings and self-financing of enterprises in the second half of 1985
The finances of the Federal Labour Office since 1981
- April 1986 Adjustment of exchange rates within the European Monetary System
The significance of enterprises' earnings for capital formation and trends in staff numbers
Innovation in international banking
- May 1986 Financial flows, total financial assets and liabilities in the Federal Republic of Germany in 1985
Bundesbank cash advances to the Federal Government and the Länder Governments
Patent and licence transactions with foreign countries in 1984 and 1985
- June 1986 The economic scene in the Federal Republic of Germany in spring 1986

Information on previously published special studies will be found in the index of special studies appended to the Monthly Report of January 1986.
