0. INTRODUCTION
This document outlines the principles for the on-boarding of new participants in TIPS, with a focus on detailing the steps towards participation in the TIPS production environment.

New participants can connect to TIPS as soon as they are certified (i.e. have completed the connectivity and interoperability testing activities required by the responsible NCB) and ready to send instant payments to and from TIPS, pending an agreement between the NCB and the TIPS Service Desk on the production connection date.

The present guide aims at providing an overview of all the available information to support the on-boarding and testing of new TIPS participants. It describes the main information available and includes links to further detailed documentation such as:

- TIPS connectivity guide
- Technical requirements
- Compliance check procedure
- Message exchange processing
- Hosting terms and conditions
- Target 2 Reference and Static Data Registration User guide
- TIPS User Testing Terms of Reference
- TIPS Certification test cases
- UDFS and UHB TIPS
- TIPS messages schema files
- UDFS and UHB CRDM
- UDFS ESMIG
- Information Guide for TARGET2 users

Further documents could be available on the National Central Bank websites. Contact your National Central Bank for further guidance.
1. **TIPS as part of the Eurosystem FMI**

TARGET Instant Payment Settlement (TIPS) is a harmonised and standardised pan-European service with common functionality across different countries and jurisdictions for settling payments instantly in Central Bank Money, with high capacity and around-the-clock availability.

The participants (i.e. Payment Service Providers or PSPs) or their Instructing Parties have a settlement interface to send Instant Payment transactions and receive payment confirmations or any other payment related messages based – when possible – on ISO 20022 standards and in accordance with the SEPA Instant Credit Transfer (SCTInst) scheme.

TIPS accounts in euro are legally opened in TARGET2 by the responsible Central Bank and have to be dedicated to the settlement of Instant Payments transactions in TIPS. In the specific scenario of the RTGS for euro (i.e. TARGET2), the TIPS account balances are taken into account for the calculation of the minimum reserve and marginal lending facility.

TIPS services are billed via TARGET2 and the Annex A shows the list of TIPS related Billable Items appearing on TARGET 2 invoice. The annex also includes a link to the TARGET2 pricing guide.
2. **ESMIG, CRDM and TIPS**

The Eurosystem Single Market Infrastructure Gateway (ESMIG) provides the single access point for the external communication to the Common Reference Data Management (CRDM) and to TIPS. This means it is in charge of A2A and U2A traffic management providing authentication of all inbound traffic (U2A and A2A) as well as sender (i.e. external party sending communication) authentication and identification.

The TIPS connectivity guide referred to in the section below provides information about how to connect to ESMIG.

The Common reference data module (CRDM) reduces the effort required to create and maintain multiple copies of reference data and centralises the management of user access rights. The configuration of TIPS reference data is done in the CRDM GUI.
3. **CONNECTIVITY TO TIPS**

3.1. **TIPS CONNECTIVITY GUIDE**

The aim of the Connectivity Guide is to explain how to establish a technical connection to TIPS and to describe the process to be followed to register to TIPS and to select a Network Service Provider (NSP). The TIPS connectivity guide is available here.

3.2. **USEFUL INFORMATION FOR U2A/A2A CONNECTIVITY**

TIPS participants who will use the services of an Instructing Party must make clear with their provider whether they will need to connect to TIPS in U2A mode in order to perform administration services e.g. update of a CMB limit. Some Instructing Parties will connect in U2A mode on behalf of the TIPS participant while others do not provide this service. Roles and privileges must be configured by either the participant or its Instructing Party and as such U2A mode is mandatory.

3.3. **PARTICIPANTS REGISTRATION**

The TIPS participant must contact its National Central bank to request the relevant registration forms. The Reference and Static Data Registration User Guide - including registration forms and Roles and privileges for Payment Banks (T2, TIPS, T2S) can be consulted in order to complete the forms. The participant is responsible for the completion and submission of its forms and those of its reachable parties. All administrational and contractual activities will be explained by the relevant TIPS National Service Desk. The National Central Bank will insert the static data in the CRDM and the TARGET2 ICM in accordance with the registration forms and the participant must check the correctness of the data as soon as it becomes effective.

3.4. **NETWORK SERVICE PROVIDERS (NSP)**

The list of NSPs is available on the ECB website. Currently, SWIFT and SIA provide this service. This is an interim situation until the T2/T2S consolidation is launched.

3.4.1. **SWIFT**

TIPS registration at SWIFT consists of two steps:

1. Participants register their user Distinguished Names (DNs) in TIPS static data in CRDM (via their National Central Bank)
2. Participants register with SWIFT to enable access to TIPS (using an e-order page on www.swift.com)

For the second step, the participant must complete and submit the relevant eMSSF on swift.com

Once logged in to swift.com, the order form is listed under "Order Products and Services":

There are different forms to subscribe to TIPS CERT environment (for testing purposes) and the TIPS PROD environment (live usage).

For every submitted order, SWIFT automatically requests approval from:
- the National Central Bank (as selected on the form)
- and the TIPS Operator

Once both approvals have been received by SWIFT, SWIFT activates the participant on the network which can take up to two weeks.

SWIFT provides confirmations by email to the participant during this process.

SWIFT’s Solution for TIPS is documented in the TIPS service description which will be made available to the participant once the registration is complete.

### 3.4.2. SIA

#### 3.4.2.1. User Registration

Once the contractual relationship is established between SIA and the Customer, SIA registers the Customer in the SIAnet.XS Portal.

The customer is requested to provide SIA with the User Administrator Appointment Letter to register the initial Customer user in the Portal.

This user represents the initial user administrator and its main duty is to create other Customer’s user in the Portal.

#### 3.4.2.2. Domain Joining, i.e. subscription to TIPS Closed Group of Users (CGUs)

Adhering to the TIPS Connectivity Guide, the Domain Join workflow enables TIPS Actors to join TIPS CGU. The request is initially verified by SIA, and then it is authorized by the relevant National Central Bank (if applicable) and, in the end, approved by the TIPS Operator. A Domain Join is requested for each CGU, i.e. for Message/File/U2A for each environment (CERT/PROD).

During this phase, the TIPS Actor defines and provides its Business User address (BU), i.e. the Technical Address used for exchange of A2A messages.
3.4.2.3. Configuration Phase
Once the CGU request has been approved by the TIPS Operator, SIA implements the A2A/U2A addressing configuration. The addressing configuration is then made available over the SIAnet.XS network nodes.

3.4.2.4. Certificates Management
A2A certificates: The Customer Security Officer requests - through SIAnet.XS Portal - the digital certificates used for authentication and non-repudiation by the SIAnet.XS network gateway to exchange traffic. The enrolment procedure is fully automated and the certificates are stored in HSM module embedded in SIAnet.XS network gateway.

U2A certificates: Customer Security Officer requests - through SIAnet.XS Portal - the digital certificates used for authentication and non-repudiation by Customer end users accessing the TIPS web portal (GUI, CRDM..). The enrolment procedure is managed by Customer Security Officer, and the certificates are stored in USB tokens. The End User Certificate Distinguished Name should match the value reported in the Form 8200.

TLS certificates: The Customer Security Officer requests - through SIAnet.XS Portal - TLS certificates to secure the communication channels between SIA and Customer infrastructure according to SIA security guidelines.

3.4.2.5. LAU Key Management
This is the configuration of the security keys used to secure the communication between Customer messaging interface and SIAnet.XS network gateway.

3.5. Access to ESMIG via NSP
The access to the ESMIG portal is provided by the NSP. Once access has been established the NSP configuration can be considered successful. Any issues resulting in not accessing the ESMIG should first be addressed to the NSP. If it is detected that the connectivity issue is not originating from the NSP, the TIPS Service Desk is ready to assist on any connectivity issues.. This means also that once ESMIG has been successfully accessed, should any connectivity issues appear, TIPS actors can contact the TIPS Service Desk directly.
Depending on the roles and privileges granted to the user in ESMIG, CRDM and/or TIPS should be accessible to them. See the document: Reference and Static Data Registration User Guide - including registration forms and Roles and privileges for Payment Banks (T2, TIPS, T2S)
4. **CONFIGURATION OF TIPS REFERENCE DATA**

The TIPS reference data set-up guide with step by step descriptions is attached as an annex to this document. The guide is intended as an additional aid for the CRDM GUI user to configure the static data under their responsibility but is not intended to replace the CRDM UHB.

4.1.1. **TIPS ROLES AND PRIVILEGES**

The description of the TIPS roles and underlying privileges is available [here](#). The linked document provides the necessary information to complete the user configuration and to ensure that the necessary access privileges to both CRDM and TIPS for U2A/A2A users are in place.

4.1.2. **CONFIGURING AN INSTRUCTING PARTY**

Detailed instructions for how to set up an Instructing Party can be found in the TIPS reference data set-up guide.

4.2. **CONFIGURATION OF REPORTS IN TIPS**

4.2.1. **TIPS directory**

The TIPS directory is available to TIPS participants from the moment they are registered in TIPS. Users can subscribe by following the steps in the TIPS reference data set-up guide. The directory can be received in push or pull mode and in a full or delta version.

4.2.2. **Message subscription**

The description of how to define a message subscription rule is found in the TIPS reference data set-up guide.
5. **Testing**

Participants in the TIPS Certification tests activities are:

- the ECB
- The TIPS Service Desk
- The Eurosystem Central Banks
- TIPS Participants (TIPS DCA Holders)
- TIPS Reachable Parties

*The TIPS User Testing Terms of Reference* (ToR) outlines the principles for the preparation, organisation and execution of User Testing for prospective participants in TIPS, with a focus on detailing the testing activities which will be carried out in the TIPS Certification test environment and in the CRDM Pre-production test environment.
6. **CERTIFICATION**

Participants must be certified by the responsible National Central Bank in order to access TIPS and CRDM production. The TIPS certification test cases (this includes a detailed description of the test cases and the certification approach) are available on the ECB website. Certification evidence will be checked by the relevant National Central Bank in cooperation with the TIPS Service Desk.
7. **SUPPORT GUIDELINES (RAISING ISSUES)**

7.1. **TIPS PARTICIPANTS**

TIPS customers may raise an issue with their National Service Desk on production and testing matters. If it is further referred to the TIPS Service Desk, the National Service Desk will receive an incident number to track the issue. Further details of this process are available in the User Testing Terms of Reference.

7.2. **INSTRUCTING PARTIES & REACHABLE PARTIES**

As Reachable Parties and Instructing Parties do not have a formal business relationship as concerns TIPS with a specific central bank, below case-by-case set-up will be applied to ensure that instructing parties are provided with the necessary business support:

i. **Functional questions:**

   For *instructing parties*, questions related to the functionality of TIPS could be directed by the instructing party to a National Service Desk (NSD), either to the NSD of the country where the instructing party is located or to the one which is having a business relationship with a TIPS DCA holder using the instructing party. Alternatively, such questions could also be addressed by a TIPS DCA holder using the instructing party. In this case, the TIPS DCA holder will submit the questions to the NSD of the CB with which it is having a contractual relationship. The NSD will either be able to clarify the question on its own or, if not, will involve the TIPS service desk.

   For *reachable parties*, questions related to the functionality of TIPS should be addressed to the TIPS DCA holder they have a relationship with and the TIPS DCA holder can contact the responsible NSD in case of need.

ii. **Enquiries related to individual TIPS DCAs or TIPS DCA holders:**

   In situations where an instructing party needs to obtain information about an individual TIPS DCA holder which is using the instructing party (e.g. the instructing party might have a question concerning a specific transaction), with the TIPS DCA holder’s consent in writing (submission of side letters which give third parties a power of attorney), its home central bank can provide the instructing party with the required information about the TIPS DCA holder itself and/or its reachable parties.

   In case of instructing parties enquiring, it is implied that the TIPS DCA holder has obtained consent also from its reachable parties (if any) that such information can be provided to the instructing party.
iii. Technical connectivity issues:

If an instructing party is experiencing a technical connectivity problem, it is allowed to contact the TIPS service desk directly and the TIPS Service Desk will provide information that is connectivity related if the contacting instructing party is authorised by a CB to receive such information (e.g. Distinguished Names, Party Technical Addresses).

If the TIPS service desk is approached in relation with other issues than connectivity, the request from the instructing party will be rejected and, depending on the specific situation, the instructing party should proceed in accordance with the procedures outlined in case i. above.
### 8. ANNEXES

List of TIPS related Billable Items appearing on TARGET 2 invoice
