Terms and abbreviations

The terms and abbreviations used in the User Handbook are shown in the table below. The reader will find terms with their description and the abbreviations, both in an alphabetical order.

Letter	Description
A	
A2A	Application-to-application
AS	Ancillary System
B	
BIC	Business Identifier Code
C	
CB	Central Bank
CMB	Credit Memorandum Balance
D	
DD	Day (e.g. used within the timestamp, every letter stands for one digit)
d	Decimal number
E	
e.g.	For example (Latin: ‘exempli gratia’)
G	
GUI	Graphical User Interface which is a type of interface which allows users to interact with electronic devices
H	
hh	Hour (e.g. used within the timestamp, every letter stands for one digit)
I	
i.e.	That is (Latin: ‘id est’)
M	
MM	Month (e.g. used within the same timestamp, every letter stands for one digit)
mm	Minute (e.g. used within the timestamp, every letter stands for one digit)
µs	Millisecond (e.g. used within the timestamp)
min.	Minimum
Max.	Maximum
N	
NRO	Non-repudiation of origin (NRO) provides the recipient (TIPS) with the evidence NRO which ensures that the originator (TIPS actor) will not be able to deny having sent the U2A instruction. The evidence of origin is generated by the originator and held by the recipient.
R	
Radio button	A type of GUI element which allows the user to choose only one of a predefined set of options.
S	
Select box	A select field in the GUI with an arrow on the right side. By clicking on the arrow, all possible input values are shown and can be selected with a mouse-click.

All rights reserved.

Letter	Description
ss	Second (e.g. used within the timestamp, every letter stands for one digit)
T	
Timestamp	A sequence of characters, denoting the date and the time in TIPS.
U	
UHB	User Handbook
U2A	User-to-application
Y	
YYYY	Year (e.g. used within the timestamp, every letter stands for one digit)

All rights reserved.

1 Introduction to TIPS

This chapter serves as an **introduction to the TIPS service**, which is developed by the Eurosystem as a pan-European Instant Payment solution in central bank money. This chapter is intended as a general description which includes all the main features of TIPS, including those that are out of scope for this document, which is dedicated to the use of the Graphical User Interface.

Section 1.1 describes the features of the TIPS Settlement model and its architecture, whereas section 1.2 focuses on the communication between TIPS and the other Eurosystem market infrastructure services, which are crucial for the smooth functioning of TIPS.

1.1 TIPS Overview

TIPS is a harmonised and standardised pan-European service with common functionalities for the settlement of Instant Payments across different countries and jurisdictions. It is based on the Single Euro Payments Area (SEPA) Instant Credit Transfer scheme. It is designed to settle payments instantly with around the clock availability without scheduled service downtime, i.e. it is open for business 24 hours a day, every day of the year. No distinction is made between domestic and cross-border payments.

TIPS offers immediate settlement in central bank money.

TIPS Participants and Instructing Parties have a Settlement interface to send payment instructions and receive payment confirmations based on ISO 20022 standards and compliant with the SEPA Instant Credit Transfer scheme.

TIPS is designed to be currency agnostic, in order to provide settlement in non-euro central bank money if requested, connecting to other RTGS systems.

1.1.1 TIPS settlement service model

All the cash used to settle transactions in euro in TIPS comes from accounts opened in T2, which is the RTGS for the euro currency. As such, TIPS can be considered as an additional service to T2. Since TIPS operates 24/7/365, it does not have to return the liquidity to the RTGS at the end of T2 operating day, but both the inbound and outbound liquidity transfers can take place only during T2 operating hours. Therefore, participants to TIPS have to take into consideration their liquidity needs for the hours during which T2 will be closed. Since TIPS account balances are taken into account on the minimum reserve calculation, a snapshot of the balance on the TIPS accounts is taken at the closing time of T2 immediately after the last execution of the Algorithm 3 (i.e. shortly after the Bank-to-Bank cut-off at 18:00 CET) in the RTGS system.

TIPS processes payments in a strict FIFO (First In First Out) order, i.e. the instructions[1] are processed in a rigorously ordered sequence and no prioritisation is foreseen. TIPS processes every Instant Payment according to **two settlement stages**: the first notifies the Beneficiary Participant after having reserved the funds on the Originator Participant account by creating a cash posting (since no partial settlement is allowed, the full amount is reserved) and the second settles the reserved amount after TIPS has received

[1] The term "instruction" refers not only to Instant Payments or Liquidity Transfers, but also to local reference data updates and any other type of request that leads to the update of reference or dynamic data in TIPS.

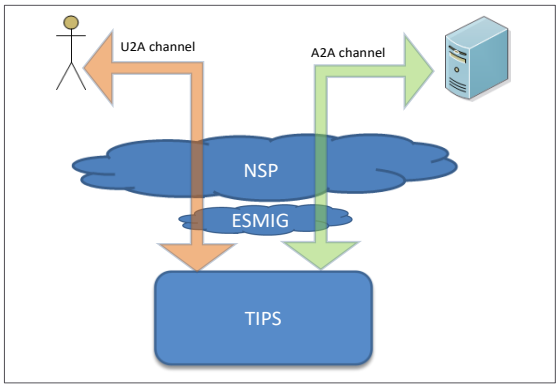

All rights reserved.

the confirmation that the payment has been accepted by the Beneficiary Participant or Instructing Party acting on behalf of the Participant/Reachable Party. In case of negative reply from the Beneficiary Participant, the reserved sum is released and is again available to settle other instructions on the same account. TIPS rejects any payment that is not settled within the configured timeout[2] period.

1.1.2 TIPS Access

TIPS Actors can access TIPS, via different Network Service Providers through the Eurosystem Single Market Infrastructure Gateway (ESMIG, see section 1.2.1) component, via U2A (User to Application) or A2A (Application to Application) mode.

Figure 1 – TIPS access

A2A communication relies, whenever possible, on ISO 20022 standard XML messages, for both inbound and outbound communication. In principle, when there is no ISO 20022 standard message available or when the usage of XML technology is not advisable for technical reasons (e.g. performance or network traffic constraints) flat data files may be used. However, at the current stage, there is no business case requiring flat data files to be used instead of ISO 20022 standard messages. All the exchanges are executed through a real-time transfer service, making it compulsory that both parties involved in a transaction are available when the message is sent (the Store and Forward service is only foreseen for the sending of Reports). In case the message cannot be delivered, no retry mechanism is available.

U2A communication, which is available for the subset of TIPS functionalities described in this document, is based on a Graphical User Interface and enables physical users of directly connected TIPS Actors to access and interact with TIPS. Authorised users are able to access GUI functions based on their access rights profile (see sections 3.3 and 3.4).

For both A2A and U2A communication any individual or application interacting with TIPS is identified by a Distinguished Name (DN), which is a sequence of attribute-value assertions separated by commas, e.g. <cn=smith, ou=tips-ops, o=bnkacctt, o=nsp-1>. The DN is uniquely linked to a digital certificate issued by the relevant NSP which TIPS Actors assign to their individuals (U2A) or applications (A2A).

The ESMIG carries out an authentication check to identify the DN and an authorisation check at service level, to verify whether the DN is enabled to submit requests to TIPS.

[2] SCT^{Inst} Timestamp Timeout value is 20 seconds.

All rights reserved.

After the ESMIG authentication, TIPS carries out the authorisation of the sender at application level based on the DN's access rights profile, which is defined at Common Reference Data Management (CRDM, see section 1.2.2) level.

TIPS authorises requests from specific users (i.e. individuals or applications identified by means of a DN) based on their relevant access rights profile. Each interaction with TIPS that can be triggered in A2A or U2A mode by means of a message or a GUI screen (e.g. sending a query or blocking a TIPS Account) is defined as a TIPS user function. The capability to trigger a specific TIPS user function is granted by means of the related Privilege.

All Privileges that are relevant for TIPS are defined and stored within the CRDM, which also offers the possibility to group different Privileges into sets known as Roles. Each of these Roles will define a standard, specific business role for TIPS Actors to use to interact with TIPS. TIPS users will be assigned one or more roles in the CRDM depending on their requirements, and the privileges contained in the roles will define their access rights configuration.

Roles are then granted to users identified by specific DNs. This allows the DN linked to the Role to trigger user functions in TIPS by exercising the Privileges contained within the Role.

1.2 Interactions with other services

TIPS is not a stand-alone service: in order to use it, TIPS Actors need to access other Eurosystem components, which are described in this section.

1.2.1 Eurosystem Single Market Infrastructure Gateway

The Eurosystem Single Market Infrastructure Gateway (ESMIG) authenticates TIPS Actors and gives them access to all authorised Eurosystem services, including TIPS. It also guarantees sanitisation of XML messages for security purposes and technical validation of the standard messages sent to the different services (schema validation and check of mandatory fields). If these checks are successful, the request and the sender's DN are forwarded to TIPS, which carries out the authorisation of the sender at application level based on the DN's access rights profile.

The ESMIG U2A portal implements an authentication web page that shall authorise users and let them reach the U2A interface URL of the relevant Eurosystem services, including TIPS.

1.2.2 Common Reference Data Management

The Common Reference Data Management (CRDM) is a centralised and harmonised reference data management component that allows authorised users to setup and maintain via a single dedicated interface all the data that is shared by more than one Eurosystem service.

For this reason, TIPS does not provide dedicated functions for the setup and most of the maintenance operations of its reference data (e.g. Participants, Accounts, Roles and Privileges). Since the actual creation of the reference data objects is performed on the CRDM, all the necessary steps to be taken in order to create the data are detailed in the CRDM UHB.

Changes to TIPS Reference data fall into two categories:

All rights reserved.

- Common reference data changes: carried out by authorised users in the CRDM interface and then propagated to TIPS on a daily basis. This also includes the initial setup of all reference data required by TIPS (e.g. creation of a new Participant or of a new Account). All functions are reported in Table 1.
- Immediate reference data changes: some time-critical reference data changes need to be implemented in TIPS immediately, without waiting the following daily propagation from the CRDM component. They are carried out by authorised users directly in the TIPS interface and processed immediately, in order to update the relevant local reference data.

The access to CRDM is possible in U2A mode through the ESMIG component. U2A functions can also be triggered in 4-eyes mode, so that a final approval from a different user is required before the change comes into effect.

As the CRDM component is available 5 days a week, 22 hours a day, the possibility to setup and maintain reference data for TIPS is only available during that time window. The data is propagated to TIPS asynchronously, on a daily basis at 17h00 CET, shortly before the business day change of T2. Specific changes corresponding to the immediate reference data changes available in TIPS (blocking/unblocking of participants, accounts or CMBs and updates of CMB limits) are propagated to TIPS with immediate effect

The following table lists all the reference data management operations that will be available in the CRDM for TIPS, along with the corresponding responsible TIPS Actors.

Table 1 – Responsible Actors for CRDM actions

Area	Object	Responsible TIPS Actor[3]
Party	Party	Operator, Central Bank
	Party Service Link	Operator, Central Bank
Cash Account	TIPS Account	Central Bank
	TIPS AS Technical Account	Central Bank
	TIPS Transit Account	Operator
	TIPS Credit Memorandum Balance	Participant
	Limit	Participant
	Authorised Account User	Participant
Access Rights Management	User	Central Bank, Participant
	Role	Operator, Central Bank
	Privilege	Operator
	Certificate DN	Central Bank, Participant
	User Certificate DN Link	Central Bank, Participant
	Role User Link	All
	Role Party Link	Operator, Central Bank
	Privilege Role Link	Operator, Central Bank

[3] The TIPS Actor types listed refer to the default responsible actors in normal operations. Functionalities for Central Banks to act on behalf of Participants and for the Operator to act on behalf of other actors will be available.

All rights reserved.

Area	Object	Responsible TIPS Actor[3]
Message Subscription Configuration	Message Subscription Rule	Central Bank, Participant
	Message Subscription Rule Set	Central Bank, Participant
Network Configuration	Network Service	Operator
	Technical Address Network Service Link	Operator, Central Bank
	DN BIC Routing	Operator, Central Bank
	Routing Configuration	Operator, Central Bank, Participant
Report Configuration	Report Type	Operator
	Report Configuration	Central Bank, Participant
Restriction Type Management	Restriction Type[4]	Operator
Configuration Parameter	Country	Operator
	Currency	Operator
	System Entity	Operator
	TIPS BIC Directory	Operator
	Service	Operator
	Currency Service Link	Operator

1.2.3 T2 and other RTGS systems

Liquidity in TIPS is provided from an external RTGS system (T2 for the euro). TIPS can retain the liquidity when the RTGS system is closed, provided that it collects the balances of all its accounts into a "snapshot" and communicates it to the RTGS system at the end of the business day of the RTGS system.

It is possible to transfer liquidity between an RTGS account and a TIPS account[5], and the owner of the RTGS Account does not need to be the same as the owner of the TIPS Account. Under normal operational conditions, TIPS foresees two types of Liquidity Transfers: Inbound (from an RTGS system to TIPS), Outbound (from TIPS to an RTGS system) and intra-service (between two TIPS Accounts belonging to the same account holder or from a TIPS Account to a TIPS AS Technical Account or vice versa). Additionally, in a contingency situation driven by a system parameter, it shall be possible to transfer liquidity to/from a Transit Account in TIPS from/to a TIPS DCA. Intra-service liquidity transfers between two TIPS Accounts are only allowed if belonging to the same account holder, whilst intra-service liquidity transfers between two TIPS AS Technical Accounts are not possible. Inbound and Outbound Liquidity Transfers are performed by moving the liquidity through an RTGS Transit Account. TIPS has one and only one Transit Account defined for each currency, owned by the relevant Central Bank. The Transit Account for the euro is owned and maintained by the ECB. Liquidity transfers do not entail a reservation of funds, unlike Instant Payments, and are settled immediately.

An Inbound Liquidity Transfer moves liquidity from an RTGS account to a TIPS account in the same currency. Inbound Liquidity Transfer orders can be triggered only in the RTGS System and are received by TIPS (TIPS does not provide a functionality to pull liquidity from the relevant RTGS System).

[4] For the blocking of TIPS Participants, Ancillary Systems, TIPS Accounts, TIPS AS Technical Accounts and TIPS CMBs.

[5] TIPS accounts in euro are in the legal perimeter of TARGET, they are opened by the responsible Central Bank and have to be dedicated to the settlement of instant payments in TIPS.

All rights reserved.

Since TIPS can keep the liquidity in its accounts while T2 is closed and considering that the balances of the TIPS accounts are, from a legal perspective, considered to be in the jurisdiction of TARGET, TIPS prepares snapshots of the balances during the T2-CLM component end of day procedure, ensuring that no liquidity transfers are pending confirmation from T2-CLM component. The same procedure is foreseen for any other RTGS system connected to TIPS.

All rights reserved.

2 Overview of the User Handbook

The TIPS User Handbook, hereinafter called UHB, aims at facilitating the use of the Graphical User Interface (GUI) of TIPS. It is intended for any TIPS user regardless of the focus of activities and describes the full range of functionalities available in user-to-application (U2A) mode. The GUI component includes all the necessary elements to provide the authorised users with the possibility to query transactional data (e.g. the balance of account) and to amend the local reference data that shall be maintained on a 24/7/365 basis.

There is only one handbook addressing all TIPS Actors: TIPS Participants, Reachable Parties, Instructing Parties (operating on behalf of TIPS Participants or Reachable Parties), Central Banks and the TIPS Operator. Updated versions of the UHB will be provided if required.

The UHB is part of the functional documentation and complements the User Detailed Functional Specifications (UDFS). The UDFS is particularly relevant for UHB readers willing to get more information on the general concepts described in the previous chapter. Although it is mainly focused on the application-to-application mode (A2A), chapter one of the UDFS contains a detailed description of the business concepts used in TIPS, which are also relevant when using the GUI.

2.1 UHB Methodology

Several symbols and methodological elements are used throughout the TIPS UHB to ease orientation and help the reader to find the desired information quickly. Every page of the main UHB parts has a similar page layout. The reader can find four different elements:

- The header, which shows the chapter and sub-chapter title;
- The margin column on the left side of each page, which is used for subheadings and information signs;
- The text column, which contains the main information, tables and screenshots;
- The footer, which shows the page number.

2.2 UHB Structure

The UHB is structured in five parts:

Part 1 The **Introduction to TIPS** provides the reader with a general overview of the TIPS service and its relation with the other Eurosystem market infrastructure services. An extensive description of the TIPS service can be found in the TIPS UDFS.

Part 2 The **Overview of the User Handbook** explains the content and the approach of both the document and the GUI. While the first section explains how to use the UHB, the second section focuses on the design and common functionalities of the GUI.

Part 3 The **Initial Setup** gives the reader a rough guide about where to start with TIPS. It describes the reference data the user has to create in order to access and make use of

All rights reserved.

the service. Since the actual creation of the reference data objects is performed on the CRDM, all the necessary steps to be taken in order to create the data are detailed in the CRDM UHB.

Part 4 The **Screen Reference guide** part describes all the screens contained in the GUI. Each description follows an identical structure which comprises detailed information on all screen fields. Readers may refer to this part if they need detailed and precise information on a screen, field or button.

Part 5 The **Screen user guide** part provides the reader with a step-by-step description of the typical GUI workflows. Each description follows an identical structure. Readers may refer to this part if they need to know how to carry out an action using the GUI.

2.3 Overview of the Graphical User Interface

The GUI is a browser-based application for communication with TIPS in U2A mode. It is based on the ISO norm 9241 'Ergonomics of human system interaction'.

TIPS provides TIPS Actors with a Graphical User Interface offering basic functionalities to access information and controls (e.g. U2A queries, local reference data maintenance). The complete list of functions available 24/7/365 via the TIPS GUI is as follows:

Table 2 – Functions available in TIPS GUI

Type	Description
Query	Account balance and status query
Query	CMB limit and status query
Query	Payment Transaction status query
Query	Liquidity Transfer status query
Query	Payment Transaction Advanced status query
Query	Liquidity Transfer Advanced status query
Query	Broadcast
Local reference data	Blocking/Unblocking of a TIPS Participant or Ancillary System
Local reference data	Blocking/Unblocking of an account
Local reference data	Blocking/Unblocking of a CMB
Local reference data	Increase/Decrease of a CMB limit
Task Management	Task List
Liquidity management	Enter Liquidity transfer Order[6]
Broadcast	Enter Broadcast

[6] Outbound liquidity transfers are allowed during the operating times of the respective RTGS.

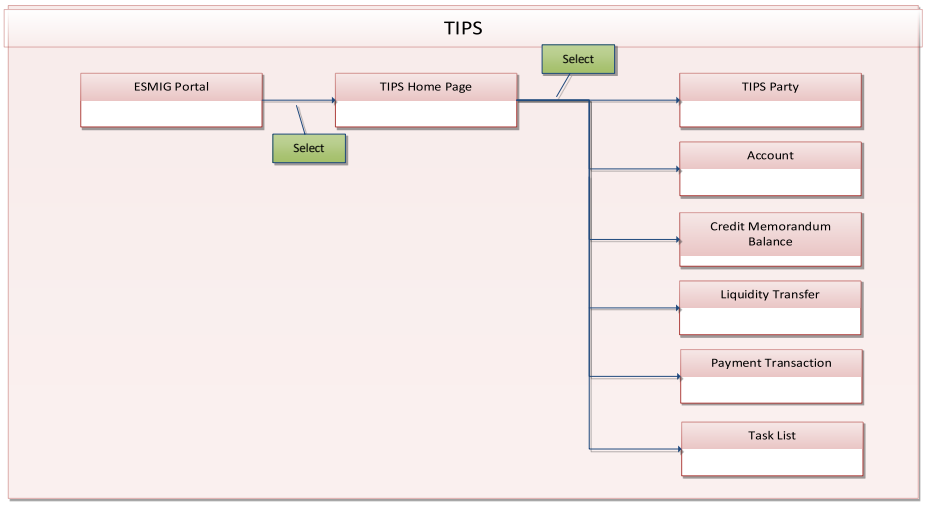

All rights reserved.

2.3.1 Sitemap

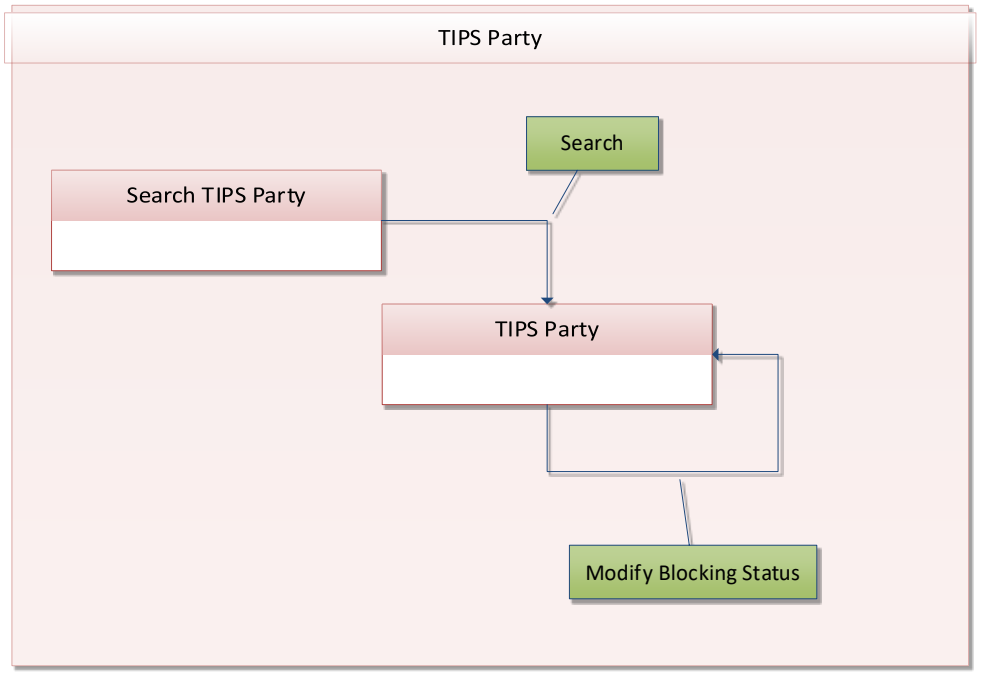

This section provides the reader with formalised illustration of screens (pictured as pink rectangles) and their related actions (pictured as green rectangles). The illustration helps the reader to get an overview of all GUI screens and their interrelation, indicated by the arrows.

The header indicates the GUI menu item pictured by the sitemap. The single GUI screens are pictured following their business logic, starting with search/list screens, following with details or enter.

2.3.2 Setup and login process

Before entering the GUI, make sure that the workstation complies with the hardware and software requirements and implement all necessary preparations (e.g. firewall settings) described below.

Such requirements/preparations may be subject to periodical review/update to comply with changing technical/regulatory scenario.

Hardware requirements

The following hardware requirements are needed:

- Processor: 1 GHz or faster with support for PAE, NX, and SSE2;
- RAM: 1 GB (32-bit) or 2 GB (64-bit);
- Hard disk space: 16 GB (32-bit) or 20 GB (64-bit);
- Graphics card: Microsoft DirectX 9 graphics device with WDDM driver.

Software requirements

- Windows 7 OS required as OS;
- JRE Version: 1.8.0_31 or higher (remark: additional constraints coming from VAN providers to be verified).

Supported Web-Browsers and Settings

- The following web-browsers are supported:
  - Microsoft Edge 93.0+
  - Google Chrome 88.0+
  - Firefox 68.0+

- Java script and java applets are used for validations on the client side therefore 'JavaScript' and 'Cookies' have to be set to 'enabled'.

GUI Access

- Users are directed to an initial page named ESMIG portal that ensures proper routing to the web applications (currently: "TIPS", "CRDM[TIPS]") the user has been granted to enter.

NRO specific requirements

- The Ascertia signing client installation onto the TIPS user workstation has to be executed manually prior to the first attempt to sign an instruction.

  The TIPS users have to ensure that the security settings of their institutions, i.e. firewalls, allow for installation of the client.

2.3.3 GUI Structure

This chapter explains the basic elements of the TIPS GUI structure (i.e. structure of the menu and the screens) helping the reader to navigate through the system and to use it quickly and efficiently.

The first subsection describes the menu structure where screens are grouped hierarchically. Then, the second subsection explains the layout structure common to all screens. The following subsections provide

All rights reserved.

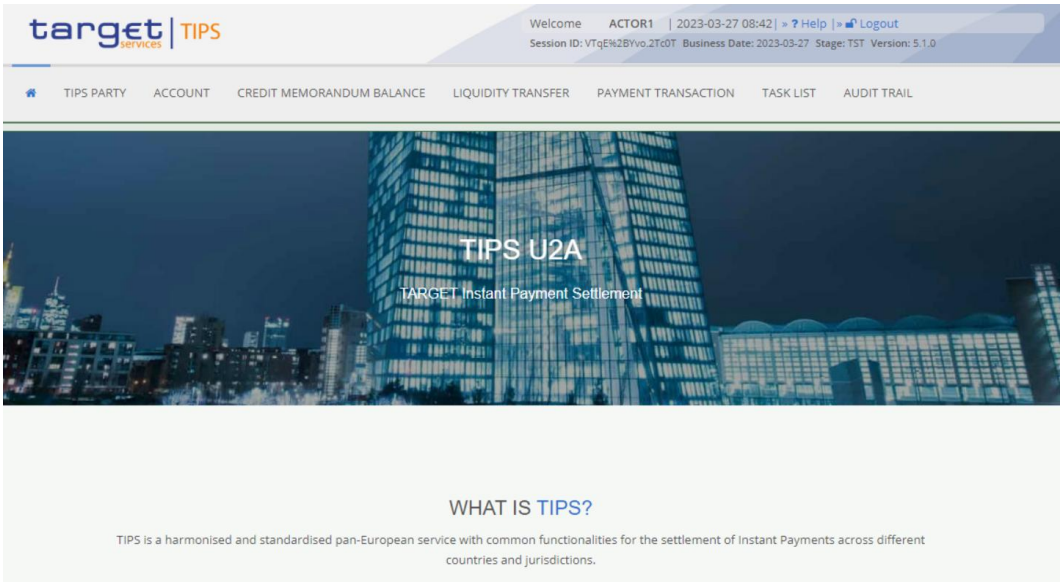

details on the different screen types and on recurring elements, such as common field types or buttons and icons.

2.3.3.1 Menu Structure

The GUI menu is structured into two hierarchical menu levels. The first level is presented as a menu bar containing the menu items (TIPS Party, Account, Credit Memorandum Balance, Liquidity Transfer, Payment Transaction, Task List, Audit Trail) which are always visible on top of each screen. “Liquidity Transfer” and “Payment Transaction” menu items can be further navigated - the second menu level is accessible via mouse-over on the first-level menu item - in order to select the desired functionality (i.e. “Search” and “Advanced Search”). “Liquidity Transfer” and “Payment Transaction” menu items on the first menu level are structural subcategories. To access either “Search” screen or “Advanced Search” screen, the user shall click on the second menu level.

Depending on the user access rights, it is possible that not all menu entries are visible. The user can contact its system administrator to verify that all the necessary Privileges to access all screens have been granted. The Privileges are listed in each screen and business scenario description.

Screenshot

2.3.3.2 Screen Structure

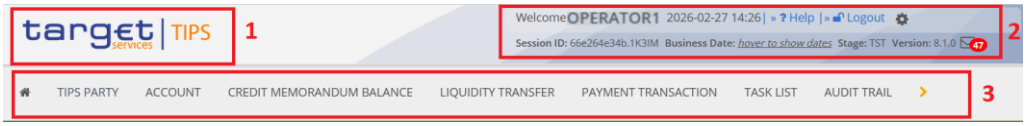

In general, each screen of the TIPS GUI follows the same layout containing a header and a content area.

Header

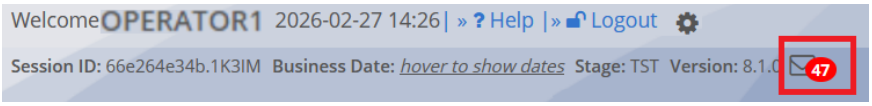

The header appears at the top of every screen. It contains four main elements providing useful information and helping the users to navigate between the different screens as shown in the illustration below

All rights reserved.

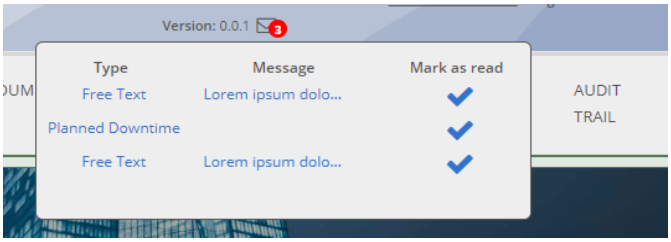

Screenshot with header elements

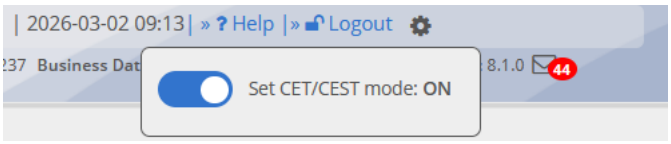

Broadcast details icon and Broadcast preview

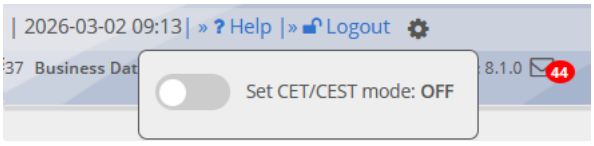

It displays a preview of the most recent unread broadcast indicating the number of unread broadcast messages.
The preview of the last three unread messages is shown via a pop-up which is reachable by positioning the mouse on the '*envelope icon*'.

Timezone settings icon

The configuration of the timezone for the visualization of all date and time in the TIPS GUI is reachable by positioning the mouse on top of the '*timezone settings*' icon.
By default the setup is defined as *CET/CEST mode: ON*

In case the setup is changed in *CET/CEST mode: OFF* all the date and time in the TIPS GUI will be shown in the Local browser timezone of the connected user.

All rights reserved.

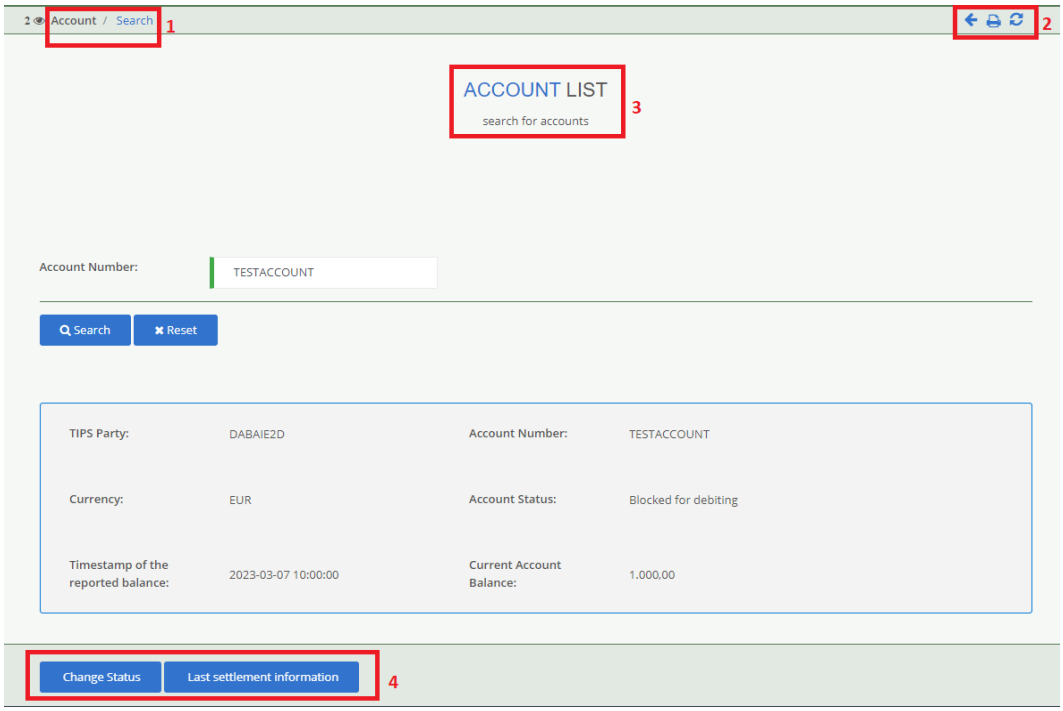

Table 3 – GUI header elements

Position	Element	Description
1	*TIPS logo* button	The element links to the welcome screen.
2	Information panel	It displays on top the Login name, the *Logout* and *Help* buttons, the *Timezone settings* icon as well as date and time of last data access. It displays in a second row the *Session ID,* the *Stage,* the software *Version*, the *Broadcast details* icon and the *Business Dates* for each currency operating in TIPS via a pop-up which is reachable by positioning the mouse on '*hover to show dates*'.
3	Menu bar	It presents the menu items and allows the user to navigate to the screens.

Content Areas

The content area is the part of the GUI where the user can trigger all business actions. It is organised by four main elements which help to interact properly with the GUI as shown in the illustration below.

Screenshot

All rights reserved.

Position	Element	Description
1	Breadcrumb	Shows the main path to the current screen
2	Print icon Refresh icon	Prints the screen content Reloads the screen
3	Frame and sub-frame title	Groups related information as a structural function
4	Button bar	Shows all available buttons for the current screen

The TIPS GUI consists of the following types of screens, each with a different function:

- *Welcome* screen
- *Search/List* screen
- *Details* screen
- *Enter* screen

Welcome screen

The *welcome* screen is the entrance into the TIPS GUI. It also contains a ticker line providing the user with the latest information. The ticker is managed by the TIPS Operator.

Search/List screen

The *search/list* screen allows the user to query the TIPS database using a predefined set of search criteria. After executing a search, a list of data records matching the search criteria is displayed in a table.

For the screens that allow advanced search criteria, the user can query the TIPS operational database using a predefined set of search criteria. After executing a search, a list of data records matching the search criteria is displayed in a table. To select an entry from a list displayed on a search/list or list screen, the user can click on the desired entry. The background colour of the table line changes to indicate the selected entry. The user can browse through the list using the table buttons. Furthermore, it is possible to arrange the search results in ascending or descending order by the columns shown. This action does not trigger a refreshed query.

Details screen

In contrast to the *search/list* screen, the user can only access the *details* screens via the *search/list* screen. The user can find all possible ways of accessing the screen via other screens in the respective screen description within the screen reference part.

Enter screen

Similar to the *details* screens, the user can only access the *enter* screens through the main menu. This type of screen is used to enter reference data modification, inject an Intra-service or Outbound Liquidity Transfer and Approve/Revoke tasks. Additionally, the user may enter a new broadcast message.

2.3.3.3 Field types and properties

On *search/list* and *enter* screens, users can enter information via input fields and select fields. Pre-filled information is displayed in read-only fields.

The description of the common field types and relevant properties follows below.

All rights reserved.

Input fields

In input fields the user can enter text and/or numeric content. The format requirements, which are part of each field/screen description, shall be fulfilled. Input-sensitive fields are input fields with an auto-complete mode that help the user to input data. As soon as the user starts typing the first characters of the respective data into an input-sensitive field, TIPS automatically proposes possible matching entries from which the desired one can be selected.

Select fields

Select fields are either select boxes, radio buttons or check boxes.

- Select boxes: Functionally a select box is a way to enter data from a limited list of possible values. In TIPS the user can find different types of select boxes: standard select box and auto-complete select box. The user can select only one value at a time.
- Radio buttons: Enable the user to make exact selections using one value from a set of options. Only one value can be selected at a time. The user shall click on the icon corresponding to the option they would like to select.
- Check boxes: Enable the user to select more than one value at the same time. The user shall click on the boxes corresponding to the options they would like to select. Selected check boxes contain a check mark.

In addition to input and select fields, the TIPS GUI has also read-only fields, which are pre-filled and do not allow data changes.

Wildcards

A wildcard is a placeholder for characters and it represents any acceptable character or a set of them in a string. When specified in the field description, the user can use a wildcard in input fields in the advanced search screens to search for data widening the result to all the strings matching the pattern. TIPS accepts two possible values:

- '*' that is a placeholder for one or more characters of the input value;
- '?' that is a placeholder for exactly one character of the input value;

Examples

TIPS*: The result list contains all data records beginning with 'TIPS'.

*Account: The result list contains all data records ending with 'Account'.

TIP?: The result list contains all data records that have any acceptable character at the end of 'TIP', e.g. 'TIPS', 'TIPT', etc.

The wildcards are always usable in the fields reported before with the following restrictions: two possible values:

- It is possible that to properly search with wildcards the user shall insert at least two or four characters. In this case, the minimum number of characters to be entered is reported in the field remarks;

All rights reserved.

It is possible that a field does not allow wildcards; in this case, this is explicitly mentioned in the Remarks field.

Field Properties

TIPS fully supports UTF-8 Character Set.

Following the SEPA Instant Credit Transfer specifications, the character set is restricted for references and identifiers to support the Latin characters which are commonly used in international communication.

The complete list is as follows:

Table 4 – TIPS character set

Character	Description
a - z	26 small characters of the Latin alphabet
A - Z	26 capital characters of the Latin alphabet
0 – 9	10 numeric characters
/	Solidus (slash)
-	Hyphen
?	Question mark
:	colon
(	Opening parenthesis
)	Closing parenthesis
.	Full stop
,	Comma
'	Apostrophe
+	Plus
	Space (blank)

As additional rules, it is required that references, identifications and identifiers must not start nor end with '/' or contain '//'.

Date

A Date type field has the following format: YYYY-MM-DD. There are four digits representing the year, two digits representing the month and two digits representing the day.

The default value of Date fields, unless differently specified, is BLANK.

The field Date is always linked to a calendar icon that opens a calendar where you can select a day. It is possible to insert a date writing in the field or using the calendar.

Time[7]

The Time type field has the following format: HH:MM:SS. There are two digits representing the hour, two digits representing the minute and two digits representing the second.

Date Time[8]

A Date Time type field has the following format: YYYY-MM-DD HH:MM:SS. There are four digits representing the year, two digits representing the month, two digits representing the day, two digits

[7] The Time in the system refers to the CET/CEST zone

[8] The Time in the system refers to the CET/CEST zone

All rights reserved.

representing the hour, two digits representing the minute and two digits representing the second. The field Date Time is always linked to a calendar icon that opens a calendar where you can select a day and a time. It is possible to insert a date and a time writing in the field or using the calendar.

2.3.4 Validation

Front-end validation

In TIPS all submission processes undergo various validations, which take place in the front-end and/or in the back-end. Only correct entries, fulfilling all predefined criteria, can be further processed. To indicate the status of the recently performed action, TIPS uses two different types of messages to indicate a successful or failed validation as described below.
In addition to the automatic validation carried out by TIPS, human validation can be imposed by using the 4-eyes mode.
Furthermore, non-repudiation of origin (NRO) is implemented for a specified number of screens.
As first part of the validation process, the front-end validation takes place without communication to the back-end. The front-end validation includes both the field validation and the cross-field validation. It is carried out after clicking on a button. The field validation verifies that all entries comply with the required format. The cross-field validation checks the data consistency between two or more fields/buttons in relation to each other.

Back-end validation

The back-end validation is the second part of the validation process. After successful front-end validation, the user's request is submitted to the back-end and checked for compliance with the business validation rules. In case of failure an error message is displayed. The user can find a detailed list of all error messages and their description in the annex of the UHB (list of references for error messages).

Result

After each validation, the TIPS GUI informs the user about the result. There are two different message types available, the error message and the success message.

Error Message

Each error message appears at the top of the content area and next to the field containing the error. In the case of a failed front-end or back-end validation, it indicates the source of the failure, the type of error and a short hint.

Success message

If the requestor is working in 4-eyes mode, the success message also provides the user with the 4-eyes principle ID. This identification number helps the user to search for the respective transaction via the Task list – search/list screen.

4-Eyes Mode

Depending on the access rights setup, the requestor can use TIPS in 2-eyes or in 4-eyes mode. The 2-eyes mode and the 4-eyes mode apply for enter screens (new and edit mode) and for any kind of deletion processes. If the requestor is a 4-eyes mode user, the actions have to be confirmed by a second user in order to be processed.

First user

In 4-eyes mode the first user enters, changes or deletes the data on a screen and afterwards submits the action by clicking on the submit button in the button bar. The success message appearing after successful validation includes a 4-eyes principle ID. For the final execution a second user is needed to confirm the action.

All rights reserved.

Second User

After the first user has entered, changed or deleted the data, a second user (with the required privilege) has to approve or revoke this action via the task list screen either using the 4-eyes mode ID or the search functionality. An alert icon is shown on the active TIPS screen for those users with appropriate privileges to approve a pending action via the Task list screen. By clicking in the alert icon the users are directed to the Task List - Search/List screen where they can first search and then approve/revoke the pending changes.

Digital signature - NRO

In order to ensure non-repudiation of origin (NRO) for critical transactions, the use of a digital signature has been implemented for specified screens. This means that the user will be asked to enter a PIN code for signature purposes whenever an instruction is initiated. With the entry of the PIN, TIPS attaches a digital signature to the instruction entered by the TIPS actor.
The following provides the exhaustive list of screens for which the NRO feature is implemented:

- *Party Blocking – Change Status Screen* [ ]
- *Account Blocking – Change Status Screen* [ ].
- *CMB Blocking – Change Status Screen - new* screen [ ].
- *CMB Limit Modification – Modify Limit screen* [ ].
- *Liquidity Transfer - new* screen [ ].
- *Task list - Details* screen [ ].
- *Broadcast - new* screen [ ].

2.3.5 Communication Network and services

Refer to the TIPS Connectivity Guide document for details on the communication network and services.

2.3.6 User Administration

Only registered users have access to the TIPS GUI, therefore registration to the network is necessary prior to the first GUI access. The Registration Guide provides information on how to fill in Registration Forms properly, e.g. access rights.

2.3.7 Security and administration service

In order to guarantee a secure and safe handling of the information and to protect customer data provided via the GUI, various security elements have been put into place:

- Each action requires system and/or human validation as described in the validation;
- The scope of available data and functions is controlled via the management of access rights;
- The security features provided by the network providers and described in their respective user documentation prevent unauthorised access.

All rights reserved.

3 Initial Setup

TIPS Service needs a series of Common Reference data that are used by TIPS but maintained and stored in a dedicated tool, the Common Reference Data Management (CRDM) component. The CRDM allows users to setup and maintain reference data that is shared by multiple Eurosystem services such as TIPS, T2 and T2S and propagates such data to the relevant services. The description of the CRDM is out of scope of this document: the following paragraphs will be devoted to a general description of the objects that are created in the CRDM in order to understand how to use them in the TIPS service.

3.1 TIPS Actors

Legal entities or organisations that interact with the TIPS application either directly or indirectly (i.e. through an Instructing Party) are generally known as TIPS Actors in the Common Reference Data Management repository. The TIPS participation model envisions different types of Actors, with different roles and responsibilities, as outlined below. Each legal entity may play different roles in TIPS. Generally speaking, any legal entity playing multiple business roles in TIPS results in the definition of multiple parties.
Legal relationships between parties in TIPS determine a hierarchical party model based on a three-level structure. The TIPS Operator is the only party on the top level of the hierarchy and it is responsible for the setup of each party of the second level, i.e. each Central Bank in TIPS. Similarly, each party belonging to the second level (i.e. a Central Bank) is responsible for the setup of all parties of its community represented by parties of the third level.
The possibility for users of each TIPS Actor to access their respective functions and fulfil their roles and responsibilities is enabled by setting up an adequate access rights configuration.

3.1.1 TIPS Operator

The TIPS Operator is the legal and organisational entity that operates TIPS. They are responsible for the initial setup and day-to-day operations of TIPS and act as a single point of contact for Central Banks and directly connected TIPS Actors[9]. TIPS Actors different from Central Banks may contact the Service Desk only for connectivity-related incidents. They are responsible for monitoring the system from a technical prospective and carrying out corrective actions in case of incidents or in the event of service unavailability. The TIPS Operator is also responsible for setting up and maintaining Central Banks reference data in the Common Reference Data Management component and, if required, they may operate on behalf of any TIPS Actor. They have full access to all live and all archived reference data and transactional data in TIPS.

3.1.2 Central Bank

Central Banks are responsible for setting up and maintaining reference data for all the TIPS Actors belonging to their national community. As far as the submission of liquidity transfers or the maintenance of reference data are concerned, they can act on behalf of one of their Actors in case of need. In order to

All rights reserved.

allow the transfer of liquidity from RTGS to TIPS and vice versa, a single Transit Account must exist in TIPS for each single currency. The European Central Bank owns and manages the single TIPS Transit Account in euro. For any other settlement currency in TIPS, the relevant non-euro Central Bank shall define a single TIPS Transit Account for its currency.
In case a Central Bank is willing to make use of TIPS not only for the provision of liquidity to the Participants of its community, but also for the settlement of Instant Payments, it will have to open another Party as Participant.

3.1.3 Participant

Participants represent entities that are eligible for participation in TARGET. They are identified by a BIC11[10] in TIPS and hold TIPS Accounts. They can set and manage Credit Memorandum Balances (CMBs) linked to their own accounts as well as Instructing Party privileges for Actors acting on behalf of themselves or of Reachable Parties defined as users of their accounts or CMBs. They can also act as Instructing Parties for other TIPS Actors.
Participants shall hold TIPS Accounts, which are opened by their responsible Central Bank and used to settle Instant Payment transactions, Recalls and Liquidity Transfers in TIPS.

3.1.4 Ancillary System

Each Ancillary System is identified by a BIC11[11] in TIPS and holds a TIPS AS Technical Account. An Ancillary System can set and manage Credit Memorandum Balances (CMBs) linked to its own account as well as Instructing Party privileges for itself acting on behalf of Reachable Parties defined as users of its account or CMBs. Ancillary System can also act as Instructing Parties for other TIPS Actors.
TIPS AS Technical Account are opened by their responsible Central Bank and used to settle Instant Payment transactions, Recalls and intra-service Liquidity Transfers in TIPS.

3.1.5 Reachable Party

Reachable Parties are also identified by a BIC11, but they cannot hold TIPS Accounts and rely on a Participant's account to settle payments in TIPS. They can also act as Instructing Parties, which allows them to interact directly with TIPS.

3.1.6 Instructing Party

The Privileges of **Instructing Party** allow an Actor to send (or receive) Instant Payments to (or from) TIPS. Instructing Parties are not defined as Parties, but as Distinguished Names that Participants and Reachable Parties can define and authorize to act on their behalf. Therefore, they are not part of the hierarchical party model. TIPS Participants, Ancillary Systems and Reachable Parties can act as Instructing Parties. Third parties, not necessarily being a TIPS Participant or a Reachable Party, can act as Instructing Parties on behalf of (other) TIPS Participants or Reachable Parties, taking on a subset or the whole set of

[10] in order to allow a given financial institution to be defined as two different TIPS parties (by the same Central Bank or by two different Central Banks), the same financial institution must be defined in the CRDM repository as two parties identified by two different 11-character BICs

[11] in order to allow a given ancillary system to be defined as two different Ancillary Systems in TIPS (by the same Central Bank or by two different Central Banks), the same ancillary system must be defined in the CRDM repository as two parties identified by two different 11-character BICs

All rights reserved.

functionalities that are available to the Participant or Reachable Party granted them in terms of access rights.

3.2 Accounts and CMBs

This entity represents data related to accounts and CMBs that are held in TIPS and can be credited or debited during the processing of Instant Payment transactions or Liquidity Transfers[12]. Accounts can only be deleted from TIPS after their closing date and if their balance is zero. Once an Account is closed (i.e. its closing date has passed) only the responsible Central Bank can send instructions to modify its balance. If an Account is deleted while its balance is not zero, this deletion is rejected.

3.2.1 Types of accounts

Accounts are opened in TIPS for the provision of liquidity and the settlement of Instant Payments. There are three types of accounts: TIPS Accounts, TIPS AS Technical Accounts and Transit Accounts.

3.2.1.1 TIPS Account

TIPS Accounts are accounts that are used by Participants for the settlement of Instant Payment transactions and Liquidity Transfers. They cannot have a negative balance. Each TIPS Participant may own one or many TIPS Accounts and they may use them for their settlement activities or to give the possibility to settle to Reachable Parties or other Participants as well as authorising several BICs to operate on the account. They are maintained by Central Banks for their Participants.

3.2.1.2 TIPS AS Technical Account

TIPS AS Technical Accounts are accounts that Ancillary Systems use for the settlement of Instant Payment transactions, positive Recall Responses and intra-service Liquidity Transfers. They cannot have a negative balance. Each Ancillary System may own only one TIPS AS Technical Account and they may use it for their settlement activities or to give the possibility to settle to Reachable Parties or other TIPS Participants by authorising their BICs to use the account for settlement. The Ancillary System that holds the TIPS AS Technical Account, in any case, remains the owner and legal responsible for it.

Central Banks create TIPS AS Technical Accounts for their Ancillary Systems.

3.2.1.3 Transit Account

Transit Accounts are opened by and belong to Central Banks. They are used for liquidity transfers between RTGS and TIPS Accounts. Transit accounts can have a negative balance, but they are not usable for the settlement of Instant Payment transactions. They are defined for carrying out the transfer of liquidity between the relevant RTGS system and TIPS. Only one transit account per settlement currency can exist in TIPS. The Transit Account for euro belongs to the European Central Bank.

[12] Only TIPS Accounts can be credited/debited via inbound/outbound Liquidity Transfers. TIPS AS Technical Account can be funded/defunded via intra-service Liquidity Transfers.

All rights reserved.

3.2.2 Credit Memorandum Balance

Credit Memorandum Balances (CMBs) represent a credit limit defined for a Reachable party in TIPS. Each CMB is linked to one account, but each account can have any number of CMBs, each representing a credit line for a Reachable party in TIPS.

CMBs offer the possibility to define limit management flexibly on a TIPS Account or TIPS AS Technical Account, without dedicating liquidity exclusively for each single customer. Specifically, the sum of all CMB limits on a TIPS Account or TIPS AS Technical Account can be higher than the balance of the same Account at any time. A CMB can be defined without a limit. In this case, the related Reachable Party can make full use of the capacity of the related Account without any limitation.

TIPS continuously keeps track of the utilisation (amount of cash used for that CMB) and headroom (amount of cash still available for that CMB) for each CMB for which a limit is defined. Whenever an Instant Payment transaction is settled against a given Originator or Beneficiary CMB, TIPS will debit/credit the account and decrease/increase the relevant CMB headroom accordingly at the same time. It is possible for the headroom to exceed the limit as a result of crediting payments: in this case the utilisation will be negative.
If an Instant Payment transaction exceeds the current CMB headroom for the Originator Participant, it is rejected. If a CMB headroom reaches zero, no more Instant Payments can be addressed to it until additional funds are provided through an Instant Payment transaction or the CMB limit is increased. In other words, in order for a debiting Instant Payment transaction addressing a given CMB to settle, the amount to be debited must be lower or equal to the current CMB headroom as well as the current balance on the account.
The CMB limit can be modified independently as a reference data update, which leads to the headroom being recalculated accordingly.
For unlimited CMBs, the headroom must always be considered infinite and, conversely, the utilisation always zero. If a limit is set for a previously unlimited CMB, the headroom and utilisation are calculated starting from the moment the limit is set. In other words, the headroom is automatically set to the same value as the limit, while the utilisation remains zero. These values are then normally updated with each subsequent payment transaction and limit change as described above.

3.3 Users

A user in TIPS is an entity representing either a physical user or an application. They are linked to a single Actor and can be assigned different Privileges. They are identified by a DN used for authentication purposes. Both U2A and A2A users are identified by an identifier which needs to be unique across the shared services.
A system user can be either a party administrator or a standard user. The party administrator is a special user that is able to assign/revoke Privileges to the other users of its party.

3.4 Privileges

Each individual action that can be undertaken in TIPS, such as instructing a payment or modifying a CMB, is defined as a TIPS Function. Access to TIPS Functions is regulated by Privileges, being in one-to-one association with them: given a Privilege, it is possible to uniquely determine which is the TIPS Function allowed.

All rights reserved.

This means that a user UX owns the access right to trigger a given TIPS user function FY if and only if UX was previously granted with the privilege PY identifying the capability to trigger FY.
The Privileges are grouped in a set of Roles; thus, each Role covers one or more TIPS functions. Roles are additive, meaning that the TIPS functions that a User can access are equal to the sum of the Functions allowed by each Privilege. Each User is linked to one or more Roles. Authorisation for a User to carry out a specific action in TIPS is determined by the combination of the Roles assigned to the User and the TIPS Actor the User belongs to. For example, a User belonging to a certain Participant may be allowed to instruct Instant Payments (based on its assigned Roles). This means that the user will be able to instruct an Instant Payment on a TIPS Account belonging to that Participant, but not on an Account belonging to another Participant.
The set of objects on which a TIPS Actor can operate is known as their data scope and is not modifiable.
The TIPS Operator users are granted with the entire pool of privileges. It is the TIPS Operator user who performs the initial configuration for Central Bank Parties. Privileges are propagated – grouped into Roles - to TIPS Actors by the Central Bank party administrators.
Not all Privileges can be assigned to all TIPS Actor types. For example, it is not possible for a Central Bank or a Participant to create or update Currencies.

3.4.1 Privileges

A TIPS Privilege represents the ability to access a given TIPS function. TIPS Privileges are set up and maintained by the TIPS Operator. They are assigned to Roles in the CRDM in order to create an organised set of access profiles to be granted to the Users.

3.4.2 Roles

They are assigned to Parties and Users for authorisation purposes. The Users are authorised to access the TIPS functionality related to the set of Privileges which are contained in the Role. CBs can configure specific roles to be granted to their own Participants and Reachable Parties, in order to grant them with proper access to functions. In turn, system administrators of Participants or Reachable Parties can use Roles granted by the relevant CB in order to assign proper access rights to their own system users.
Based on the granted set of Privileges, system users are authorised to input their own Reference data objects and to access and maintain them, i.e. to create new objects or to update or delete already existing objects.

3.5 General reference data

Some reference data used in TIPS are maintained in the CRDM by the TIPS Operator.

3.5.1 Business Identifier Code

Each TIPS actor is identified with an 11-character Business Identifier Code (BIC11) which must be unique in TIPS. BICs in TIPS are normally based on the SWIFT BIC Directory but can be manually inserted, modified and deleted by the TIPS Operator in contingency situations.

All rights reserved.

3.5.2 Currency

The TIPS Operator is responsible for maintaining the data of all the currencies that are available for settlement in TIPS. They are defined using ISO-compliant codes. Currency data includes the maximum number of decimal positions that can be accepted in a TIPS payment instruction in a given currency.

3.5.3 RTGS System

The TIPS Operator is responsible for listing all the RTGS Systems that interact with TIPS, along with the respective currency, status (i.e. whether they are open and ready to receive liquidity transfers or not), distinguished name and business date. This distinguished name is used by the RTGS System to send any messages or queries to TIPS (e.g. to manage the transfer of liquidity from the RTGS System to TIPS and to query the balances of the accounts linked to the RTGS System's account).

The status and the business date are updated automatically upon receiving a camt.019 message from the relevant RTGS System and can be modified manually by the TIPS Operator in contingency situations. The related update of the TIPS business date for the interested currency is also shown in the information panel of the TIPS GUI header (see section 2.3.3.2).

3.5.4 System parameters

The system parameters are configured by the TIPS Operator in the CRDM and propagated to TIPS once a day at 17h00 CET, shortly before the business day change of the T2-CLM component. They include the Retention Period, the SCT^{Inst} Timestamp Timeout, the Originator side Offset, the Beneficiary side Offset, the Sweeping Timeout, the Maximum Amount, the Acceptable Future Time Window, the Investigation Offset and the RTGS Alert. Please refer to the UDFS section 1.7.1 – "Service configuration" for a detailed description.

All rights reserved.

4 Screen Reference Guide

The TIPS Graphical User Interface provides the TIPS user with a number of U2A functions that must be available on a 24/7/365 basis. The GUI will be typically used to perform changes to local reference data that need to have immediate effect, to query the status of the accounts and the CMBs and to initiate Outbound Liquidity Transfers.

Within TIPS, local reference data maintenance instructions submitted in U2A mode can be triggered either in 2-Eyes or in 4-Eyes mode. In the second case, a final approval from a different user is required before the change comes into effect. When a 4-Eyes instruction is submitted, it is provisionally validated and put on hold until a second user, different from the initial submitter, confirms or revokes it. If the instruction is confirmed, it is submitted to TIPS as any other 2-Eyes instruction.

Context of Usage	The context of usage explains what a screen displays, what the user can do with the screen and which special features are available for the screen, for example the need for confirmation in 4-eyes mode or usage restrictions.
Screen Access	The screen access lists all possible ways to access the screen. This includes navigation via the menu and navigation via other screens.
Privileges	The Privileges segment lists all necessary Privileges to access the screens and to use its functions. First, the Privileges to access a screen are mentioned, followed by the Privileges that are necessary to use all functions on the screen.
Screenshot	The screenshot can be used as orientation to work with the UHB. All screenshots are based on the maximum of access rights, so deviations are possible if the user does not own all privileges which are necessary to use the screen in its full extent. In addition, deviations between the screenshot and the field/button description are possible in the case of mutually exclusive functions and based on a specific selection the user has made. Values shown on the screenshot might also deviate from the default values indicated in the description.
Field description	The field description provides all the relevant information related to the respective field name. It is structured in table format with a separate table for each frame. Sub-frames are indicated by subsection headings in the table. The following table explains the structure of a field description.

Table 5 – Example of a Field description

Field description

Query Account Balance and status : results	
TIPS Participant identifier	Shows the BIC of the party which sent the transaction
Account identifier	Shows the ID of the Account
Account status	Shows whether the Account is blocked for credit, blocked for debit, unblocked
Currency	Shows the currency under which the Account is denominated
Timestamp of the reported balance	Shows the timestamp at which the data was retrieved

All rights reserved.

Current Account balance	Shows the sum of unreserved and reserved balance

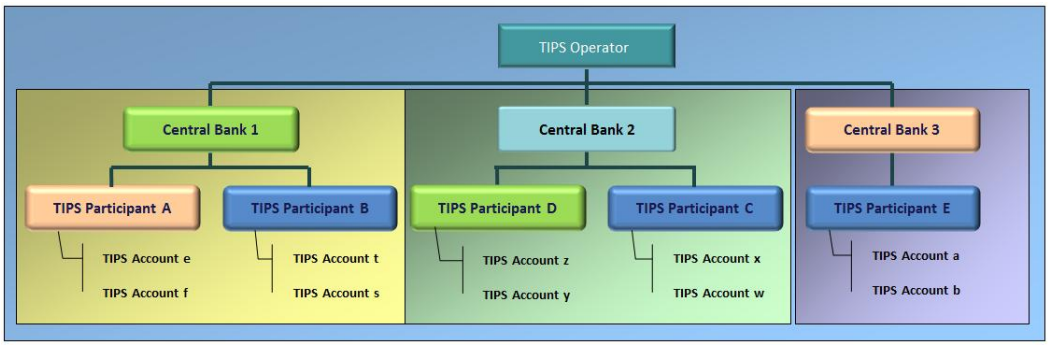

4.1 Queries

The Queries component provides the user with real-time information on production data (e.g. limit utilisation, account balances). The queries are available during the operating hours of the TIPS service, i.e. 24/7/365 and they are not queued but processed immediately, using the most recent data available in the system.

Each query may be available in A2A mode and/or U2A mode. The Queries component generates A2A queries as XML messages and in compliance with the ISO 20022 standard, where applicable.

The Queries component provides different users with a different scope of data, depending on their access profiles. While Central banks have access to all accounts in their books (and subsequently to all transactions on these accounts) Participants and Ancillary Systems can only access their own accounts. Access for Instructing Parties is even further restricted to those accounts which they are permitted to instruct. If a party does not have access to the underlying data the query returns an error code. The TIPS Operator has access to all the Accounts, CMBs and transactional data in TIPS.

Figure 2 – TIPS hierarchical party model

4.1.1 Query Account balance and Status

The Account balance and status query allows the authorised actor to get detailed information for one account. TIPS does not foresee the usage of wildcards, therefore only one account per search can be retrieved.

4.1.1.1 Query account balance and status – Search screen

Context of Usage

This screen contains the ID of the Account as the only available search field. By inputting the relevant data, the requestor can search the detailed information on the balance and the status of the Account. Account data, which will appear in the lower part of the screen, can only be viewed by users of the Account Owner, the relevant Central Bank which created and maintains it and the relevant Instructing Party, if granted the necessary privileges to instruct using this Account.

Screen Access

- Account >> *Search* screen

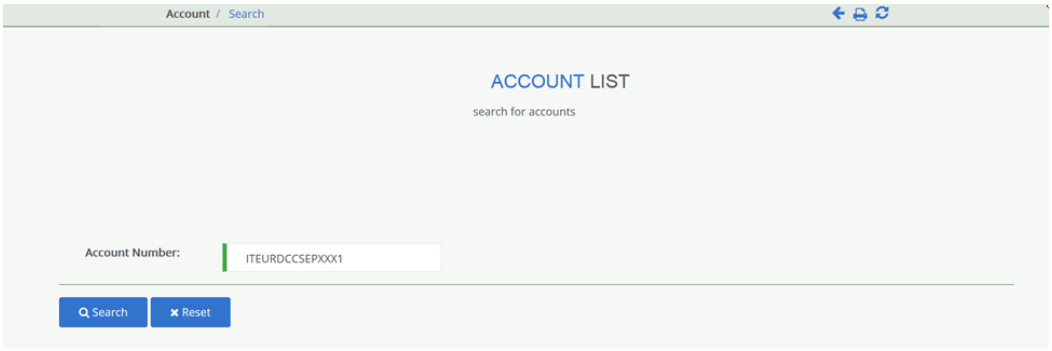

Privileges

To use this screen, the following Privileges are needed:

All rights reserved.

- TIP_Query
- TIP_QueryReachable

Field description

Query Account balance and status: Search Criterion	
Object	**Required Format**
Account number	Max. 34 characters (SWIFT-x). References for error messages: [▸]: ▪ R006

Buttons

Search	This function enables the user to retrieve the information on the selected account. References for error messages: [▸]: ▪ R010
Reset	This function enables the user to set the field to default value

4.1.1.2 Query account balance and status – Display screen

Context of Usage

The lower part of the screen displays detailed information on the balance and the status of the Account. The Change Status and the Last Settlement Information buttons are not enabled until a successful inquiry is executed. Besides, the latter is available only if the user accessing the screen is the Operator or belongs to a Central Bank.

Query Account balance and status: Results	
TIPS Party	Shows the BIC of the party which owns the account
Account Number	Shows the ID of the account
Currency	Shows the currency under which the account is denominated
Account status	Shows whether the account is blocked for credit, blocked for debit, blocked for credit and debit, unblocked
Timestamp of the reported balance	Shows the timestamp at which the data was retrieved. Displayed format is: YYYY-MM-DD hh:mm:ss
Current Account balance	Shows the sum of unreserved and reserved balances

Buttons

Change Status	This function enables the user, if provided with the needed privilege, to access the Account blocking screen. References for error messages: [▶]: ▌R008

All rights reserved.

Last Settlement Information	This function enables the user to display a pop-up including the following information concerning the last settlement occurred on the relevant account:[13] ▌Transaction Identification (Identification of the originating Payment Transaction/Liquidity Transfer) ▌Settlement timestamp (the time at which the Payment Transaction/Liquidity Transfer was settled. Displayed format is: YYYY-MM-DD hh:mm:ss:µsµsµs)

4.1.2 Query CMB limit and Status

The CMB limit and status query allows the authorised actor to get the detailed information for one CMB. TIPS does not foresee the usage of wildcards, therefore only one CMB per search can be retrieved.

4.1.2.1 Credit Memorandum Balance – Search screen

Context of Usage

This screen contains the ID of the CMB as the only available search field. By inputting the relevant data, the user can search the detailed information on the limit utilisation and the status of the CMB. CMB data, which will appear in the lower part of the screen, can only be viewed by users of the Account Owner, the relevant Central Bank which created and maintains it and the relevant Instructing Party, if granted with the necessary privileges to instruct using this CMB.

Screen Access

▌Credit Memorandum Balance >> *Search* Screen

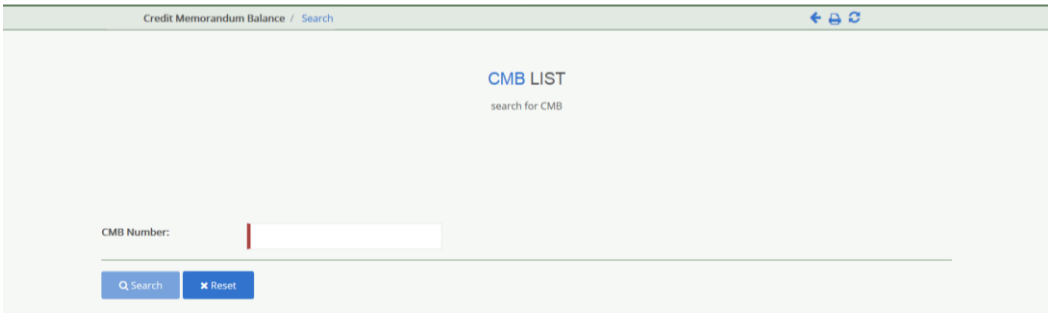

Privileges

To use this screen, the following Privileges are needed:

▌TIP_Query

▌TIP_QueryReachable

[13] The latest settlement information includes also postings originated by settlement activities also related to TIPS CMBs linked to the relevant account being displayed.

All rights reserved.

CMB number	Max. 34 characters (SWIFT-x). References for error messages: [▸]: ▪ R006 ▪ R020

Buttons

Search	This function enables the user to retrieve the information on the selected CMB. References for error messages: [▸]: ▪ R010
Reset	This function enables the user to set the field to default value

4.1.2.2 Credit Memorandum Balance – Display screen

Context of Usage

This screen displays detailed information on the balance and the status of the CMB. Data can only be viewed by users of the Account Owner, the relevant Central Bank which created and maintains it and the relevant Instructing Party, if granted the necessary privileges to instruct using this CMB. This function is available in both U2A and A2A mode.

The Change Status and the Modify Limit buttons are not enabled until a successful inquiry is executed.

Screen Access

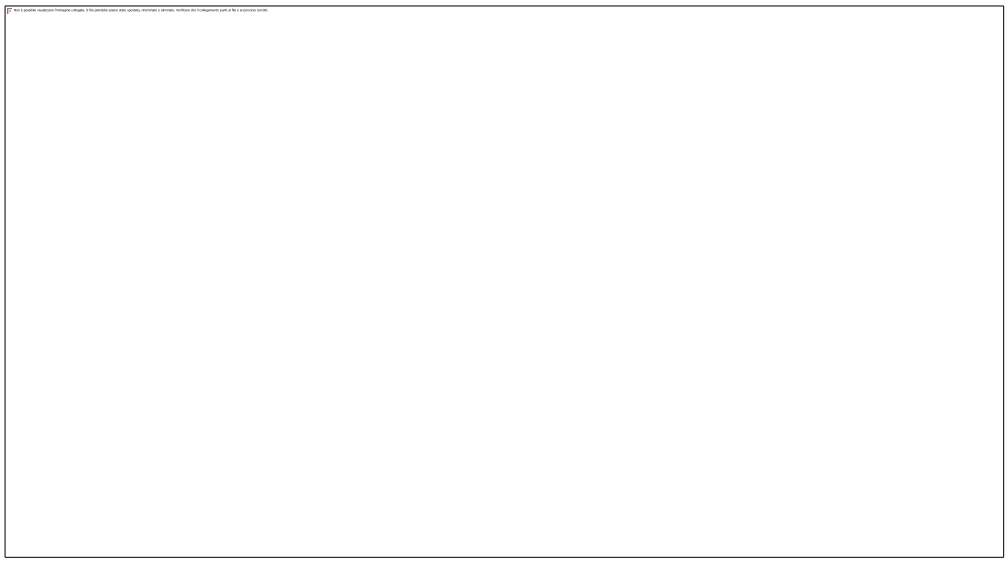

- Credit Memorandum Balance >> *Search* screen >> Click on the *Search* button

Privileges

To use this screen, the following Privileges are needed:

- TIP_Query
- TIP_QueryReachable

Screenshot

Field description

Query CMB Limit and status: Results	
CMB user BIC	Shows the BIC of the CMB user
CMB Number	Shows the ID of the CMB, which is unique in TIPS
Account Number	Shows the ID of the account to which the CMB is linked
Currency	Shows the currency under which the CMB is denominated
CMB status	Shows whether the CMB is blocked for credit, blocked for debit, blocked for debit and credit, unblocked
Timestamp of the reported values	Shows the timestamp at which the data was retrieved. Displayed format is: YYYY-MM-DD hh:mm:ss
Current CMB limit	Shows the maximum amount of liquidity that can be used for settlement of Instant Payments attempting to debit the selected CMB
Current CMB Headroom	Shows the amount of liquidity still available for Instant Payments debiting the selected CMB

4.1.3 Query Liquidity transfer status

The Liquidity Transfer status query allows the authorised actor to get the detailed information for one liquidity transfer. TIPS allows actors to query liquidity transfer orders which are still available in the production system, i.e. before they are purged, after a data retention period set to five calendar days.

The Liquidity Transfer status advanced query allows the authorised actor to get additional details on liquidity transfers than those obtained via the Liquidity Transfer status query. TIPS allows actors to query liquidity transfer orders available in the production system within the last three calendar months, in near-real time. The search results will provide a list of a maximum of e.g. 1.000 entries.

4.1.3.1 Liquidity Transfer status – Search screen

Context of Usage

The upper part of the screen contains two search fields that must be inserted together to retrieve the relevant information. TIPS shall allow the Central Banks, TIPS Participants, Ancillary Systems and authorized Instructing Parties to query the status of a Liquidity Transfer, which is identified by the combination of the Debtor BIC and the liquidity transfer transaction reference. This function is available only in U2A mode.
In case the user is not entitled to view the data on the searched transaction an error code is returned.

Screen Access

- Liquidity Transfer >> *Search* Screen

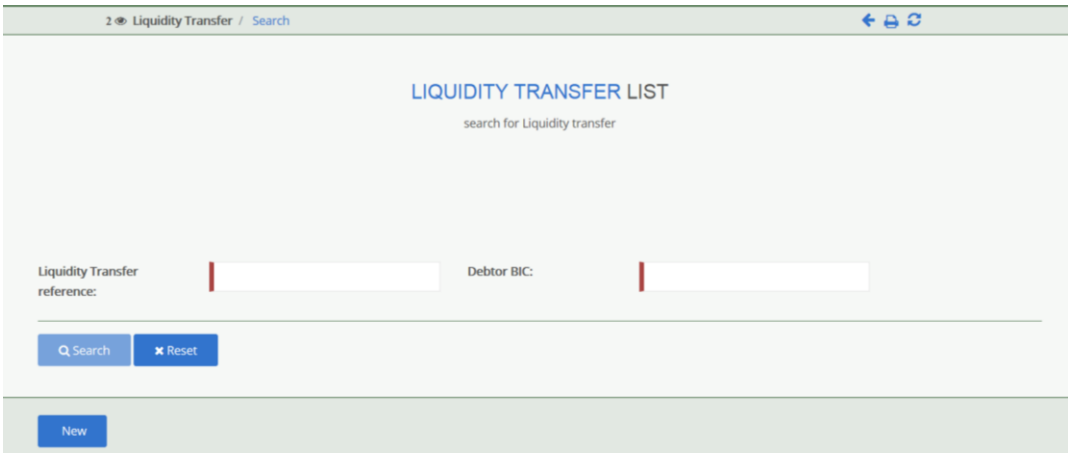

Privileges

To use this screen, the following Privileges are needed:

- TIP_Query
- TIP_QueryReachable

All rights reserved.

Screenshot

Field description

Query Liquidity Transfer status: Search criteria	
Object	**Required Format**
Liquidity Transfer reference	camt.050 transaction Id
Debtor BIC	Field where to enter the BIC of the owner of the account to be debited. Format is BIC11. In case of Inbound LT this field shall be filled in with the BIC of the RTGS system.

Buttons

Search	This function enables the user to retrieve the information on the selected Liquidity Transfer. References for error messages: [▸]: ▸ R010
Reset	This function enables the user to set the field to default value
New	This function enables the user to access the New Liquidity Transfer order screen.

4.1.3.2 Liquidity Transfer status – Details screen

Context of Usage

The lower part of the screen displays detailed information on the status of the relevant payment transaction, showing whether the transaction was settled successfully. This function is available only in U2A mode. In case the user is not entitled to view the data on the searched transaction an error code is returned.

Screen Access

- Liquidity Transfer - *Search* Screen >> Click on the *Search* button

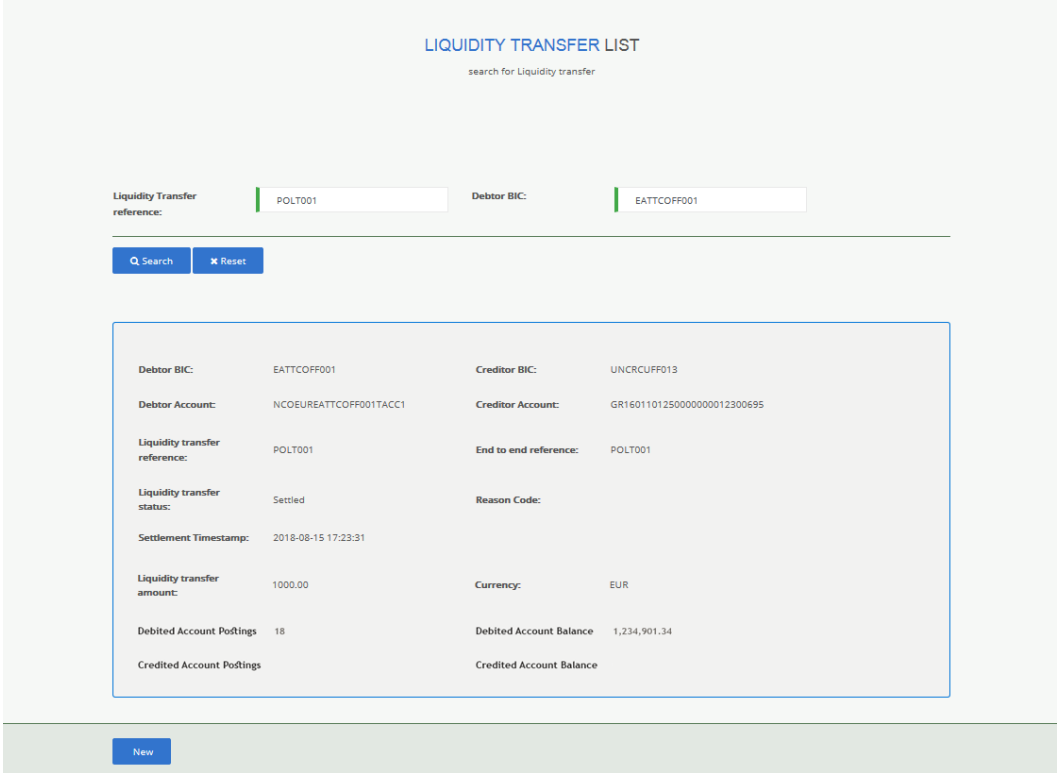

Privileges

To use this screen, the following Privileges are needed:

- TIP_Query
- TIP_QueryReachable

All rights reserved.

Screenshot

Field description

Query Liquidity Transfer: Result	
Debtor BIC	Shows the BIC code of the debtor of the given Liquidity transfer
Creditor BIC	Shows the BIC code of the creditor of the given Liquidity transfer
Debtor Account	Shows the debited account
Creditor Account	Shows the credited account
Liquidity transfer reference	Shows the reference of the liquidity transfer order
End to end reference	Shows the originator reference of the Liquidity Transfer.
Liquidity transfer status	Shows whether the instruction was settled or not settled
Reason code	Describes the reason of the unsettled status. Not filled in case the Liquidity transfer status is settled
Currency	The currency of the liquidity transfer
Settlement timestamp	Shows the time at which the Liquidity transfer was settled. Displayed format is: YYYY-MM-DD hh:mm:ss

All rights reserved.

Liquidity transfer amount	Shows the amount of the Liquidity transfer
Debited Account Postings	Sequence number of postings on TIPS debited account from the start of the business day.
Debited Account Balance	Debited Account Balance after the settlement.
Credited Account Postings	Sequence number of postings on TIPS credited account from the start of the business day.
Credited Account Balance	Credited Account Balance after the settlement.

4.1.3.3 Liquidity Transfer status – Advanced Search/List screen

Context of Usage

This screen contains the search criteria that can be used to retrieve the relevant information on liquidity transfer. The user can use multiple search criteria jointly in order to restrict the returned data set of liquidity transfers. The user can browse through the list using the table buttons. In order to reduce the risk of performance issues, in case of too loose search criteria that may lead to the retrieval of a large number of liquidity transfer orders, the inquiry will limit the displayed result to 100 liquidity transfers per page (e.g. up to a maximum of 10 pages).

Furthermore, the user can sort the results acting on each column of the table and, additionally, the user can exclude rows from the result set.

TIPS shall allow the Central Banks, TIPS Participants, Ancillary Systems and authorized Instructing Parties to query Liquidity Transfers which match the selected search criteria.

This function is available in U2A mode only. As a general remark, liquidity transfers are eligible to be retrieved if the involved debited/credited account belongs to the data scope of the requestor.

Screen Access

- Liquidity Transfer >> *Advanced Search* Screen

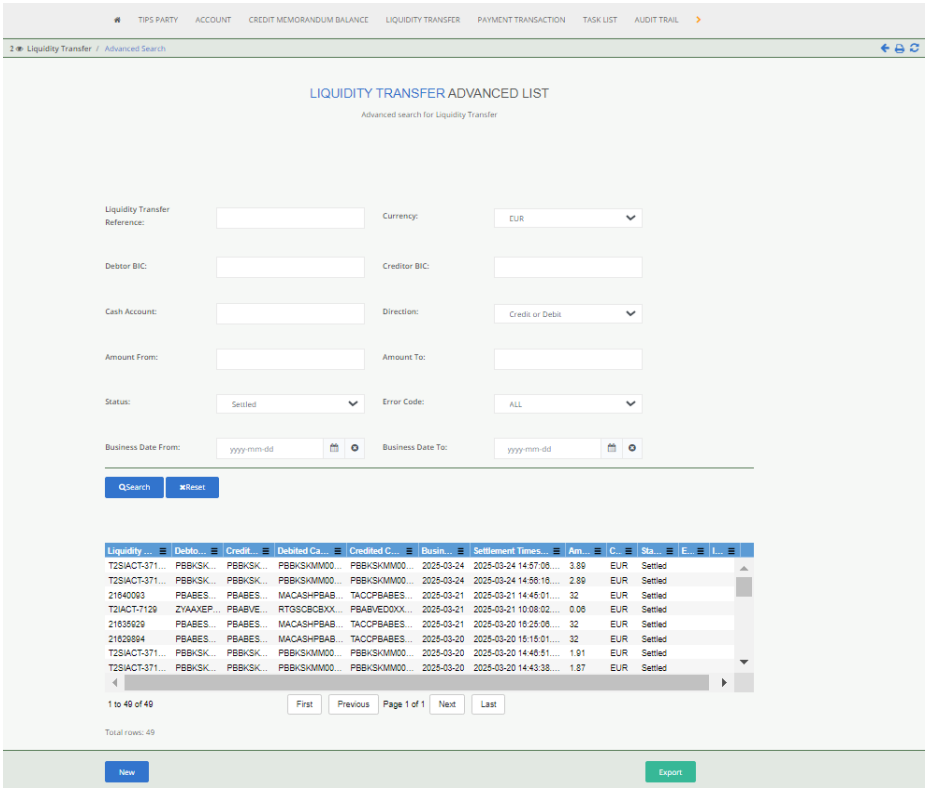

Privileges

To use this screen, the following Privileges are needed:

- TIP_Query
- TIP_QueryReachable

All rights reserved.

Field description

Advanced Query Liquidity Transfer: Search criteria	
Object	**Required Format**
Liquidity Transfer reference	camt.050 transaction Id. Required format is: max. 35x characters.
Currency	Select the currency of the liquidity transfer from the possible values: ▌EUR (default value) ▌DKK ▌SEK
Debtor BIC	Field where to enter the BIC of the Debtor Agent. Possible values are: ▌at least 4 and less than 11x characters followed by a wildcard character (*); ▌BIC11 without wildcard character. In case of Inbound LT this field shall be filled in with the BIC of the RTGS system.
Creditor BIC	Field where to enter the BIC of the Creditor Agent that could be the BIC of the Financial Institution on whose behalf the Liquidity Transfer is performed (only in case of intra-service liquidity transfers funding a TIPS AS technical account). Possible values are: ▌at least 4 and less than 11x characters followed by a wildcard character (*); ▌BIC11 without wildcard character.

All rights reserved.

Cash Account	Enter the number of the Cash Account. This field is mandatory if the user is neither a NCB user nor the Service Operator. Required format is: max. 34x characters. The field cannot contain wildcards if the user is neither a NCB user nor the Service Operator.
Direction	This field offers the possibility to restrict the result list to liquidity transfers, including rule-based LTs, either debiting or crediting the account (or both). Possible values: ▌Credit or Debit ▌Credit ▌Debit Default value: 'Credit or Debit'
Status	Select the status of the liquidity transfer from the possible values: ▌All ▌Settled (default value) ▌Failed ▌Rejected
Amount From	This field offers the possibility to restrict the result list to liquidity transfers of amounts equal to or higher than the value entered in this field. The value entered in this field has to be lower than the value entered in the field 'Amount To'.
Amount To	This field offers the possibility to restrict the result list to cash transfers of amounts smaller than or equal to the value entered in this field. The value entered in this field has to be higher than the value entered in the field 'Amount From'

All rights reserved.

Error Code	Select the error code of the payment transaction from the possible values: ▌All (default value) ▌DNOR ▌DS14 ▌L001 ▌L002 ▌L003 ▌L004 ▌L005 ▌L006 ▌L007 ▌L008 ▌L009 ▌L010 ▌L011 ▌L012 ▌L014 ▌L015 ▌L099
Business date From	Field where to enter the lower bound for the business date of the liquidity transfers. Required format is: YYYY-MM-DD
Business date To	Field where to enter the upper bound for the business date of the liquidity transfers. Required format is: YYYY-MM-DD

Advanced Query Liquidity Transfer - List	
Liquidity Transfer reference	Shows the reference of the liquidity transfer order
Debtor BIC	Shows the BIC code of the of the Debtor Agent
Creditor BIC	Shows the BIC code of the Creditor Agent that can be also the BIC of the Financial Institution on whose behalf the Liquidity Transfer is performed (only in case of intra-service liquidity transfers funding a TIPS AS technical account).
Credited Cash Account	Shows the number of the credited cash account
Debited Cash Account	Shows the number of the debited cash account
Status	Shows the status of the liquidity transfer
Error Code	Shows the error code of the liquidity transfer
Internal Error Code	Shows the internal error code of the liquidity transfer. Furthermore, the user-friendly error description is provided: a tooltip appears when hovering over the Internal Error Code cell in the result grids, and a dedicated column is included in the exported file.

All rights reserved.

Amount	Shows the amount of the liquidity transfer
Currency	Shows the currency of the liquidity transfer
Business Date	Shows the business date of the liquidity transfer
Settlement Timestamp	Shows the settlement timestamp of the liquidity transfer

Buttons

Search	This function enables the user to start a search according to the filled in criteria.
Reset	This function enables the user to set the fields to default value
Export	This function enables the user to export the result of the executed query in a csv-file. In addition to the exported result the following information is exported at the start of the file: name of the exported screen (including menu path), current date, name of the user who triggered the exporting, classification label 'RESTRICTED', timestamp of the export, defined search criteria (query parameters, if applicable).
New	This function enables the user to access the New Liquidity Transfer order screen.

4.1.4 Query Payment transaction

The Payment transaction status query allows the authorised actor to get the detailed information for one payment transaction. TIPS allows actors to query payment transactions which are still available in the production system, i.e. before they are purged, after a data retention period set to five calendar days.

The Advanced Payment transaction status query allows the authorised actor to get additional details on payment transactions than those obtained via the Payment transaction status query. TIPS allows actors to query payment transactions in the production system within the last three calendar months, in near-real time.

4.1.4.1 Query Payment transaction – Search screen

Context of Usage

This screen contains two search fields that must be inserted together to retrieve the relevant information. TIPS shall allow the Originator Participant, the Instructing Party acting on behalf of the Originator Participant, the Beneficiary Participant and the Instructing Party acting on behalf of the Beneficiary Participant to query the status of a payment transaction, which is identified by the combination of the BIC of the Originator Participant or Reachable Party and the payment transaction reference.

This function is available in U2A mode only. In case the user is not entitled to view the data on the searched transaction an error code is returned.

Screen Access

- Payment transaction >> *Search* Screen

Field description

Query Payment transaction: Result	
Originator BIC	Shows the BIC code of the Originator PSP of the given transaction
Beneficiary BIC	Shows the BIC code of the Beneficiary PSP of the given transaction
Payment Transaction reference	Shows the reference of the transaction
Transaction status	Shows whether the transaction was settled or not settled
Reason code	Describes the reason of the unsettled status. Not filled in case the Transaction status is settled
Settlement timestamp	Shows the time at which the transaction was settled. Displayed format is: YYYY-MM-DD hh:mm:ss The field is not filled in case the transaction is not settled.

All rights reserved.

Settlement business date	Shows the business date at which the transaction was settled. Displayed format is : YYYY-MM-DD The field is not filled in case the transaction is not settled.
Payment transaction amount	Shows the amount of the transaction
Debited Account Postings	Number of postings on TIPS debited account from the start of the business day.
Debited Account Balance	Debited Account Balance after the settlement.
Credited Account Postings	Number of postings on TIPS credited account from the start of the business day.
Credited Account Balance	Credited Account Balance after the settlement.
Acceptance timestamp	Shows the Acceptance timestamp of the instant payment. Displayed format is: YYYY-MM-DD hh:mm:ss
Payment transaction reception timestamp	Shows the timestamp when the payment transaction is received by TIPS from the originator participant. This timestamp contains the time of last update for payment accepted by TIPS (TIPS network is “stateless” and there is no evidence of the time a message is received). Displayed format is: YYYY-MM-DD hh:mm:ss.µsµsµs
Payment transaction forwarding timestamp	Shows the timestamp when the payment transaction is forwarded to the beneficiary participant. This timestamp contains the time of last update for payment forwarded by TIPS (TIPS network is “stateless” and there is no evidence of the time a message is sent out). Displayed format is: YYYY-MM-DD hh:mm:ss.µsµsµs

All rights reserved.

Confirmation reception timestamp	Shows, if available, the timestamp when the confirmation for a payment transaction is received by TIPS from the beneficiary participant. This timestamp contains the time of last update for payment confirmed by TIPS (TIPS network is “stateless” and there is no evidence of the time a message is received). Displayed format is: YYYY-MM-DD hh:mm:ss.µsµsµs
Confirmation to the originator timestamp	Shows, if available, the timestamp when the confirmation for a payment transaction is forwarded by TIPS to the counterpart. This timestamp contains the time of last update for payment notified by TIPS (TIPS network is “stateless” and there is no evidence of the time a message is sent out). Displayed format is: YYYY-MM-DD hh:mm:ss.µsµsµs

4.1.4.3 Query Payment transaction - Advanced Search/List screen

Context of Usage

This screen contains the search criteria that can be used to retrieve the relevant information on payment transactions. The user can use multiple search criteria jointly in order to restrict the returned data set of payment transactions. The user can browse through the list using the table buttons. In order to reduce the risk of performance issues, in case of too loose search criteria that may lead to the retrieval of a large number of transactions, the inquiry will limit the displayed result to the most recent 100 payment transactions per page (e.g. up to a maximum of 10 pages).

Furthermore, the user can sort the results acting on each column of the table and, additionally, the user can exclude rows from the result set.

TIPS shall allow the Originator Participant, the Instructing Party acting on behalf of the Originator Participant, the Beneficiary Participant and the Instructing Party acting on behalf of the Beneficiary Participant to query the status of payment transactions, which match the selected search criteria.

This function is available in U2A mode only. In case the user is not entitled to view the data on the transactions looked up an error code is returned. As a general remark, each payment transaction is eligible to be retrieved if either the Originator BIC or the Beneficiary BIC (or both) belong to the data scope of the requestor.

Screen Access

- Payment transaction >> *Advanced Search/List* Screen

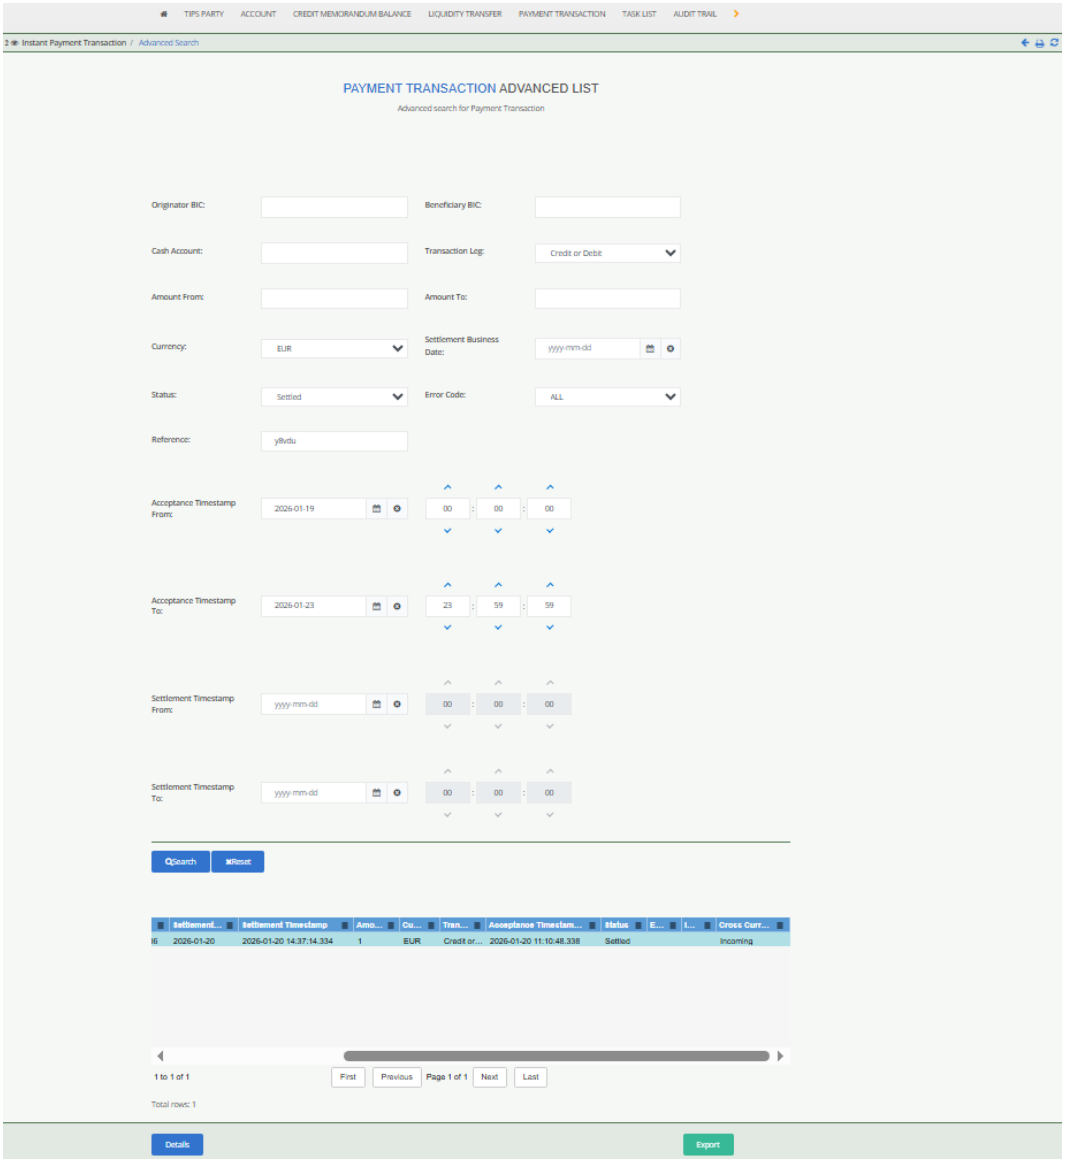

Privileges

To use this screen, the following Privileges are needed:

Screenshot

Field description

Advanced Payment transaction status query: Search criteria	
Object	**Required Format**
Originator BIC	Field where to enter the debtor agent BIC. Possible values are: ▌at least 4 and less than 11x characters followed by a wildcard character (*); ▌BIC11 without wildcard character.
Beneficiary BIC	Field where to enter the creditor agent BIC. Possible values are: ▌at least 4 and less than 11x characters followed by a wildcard character (*);

All rights reserved.

	▌BIC11 without wildcard character.
Settlement business date	Field where to enter the business date of the payment transaction as a lookup criterion. Required format is: YYYY-MM-DD
Settlement Timestamp From	This field offers the possibility to restrict the result list to payment transactions with settlement timestamp equal to or higher than the value entered in this field. Required format is: YYYY-MM-DD HH:MM:SS
Settlement Timestamp To	This field offers the possibility to restrict the result list to payment transactions with settlement timestamp smaller than or equal to the value entered in this field. Required format is: YYYY-MM-DD HH:MM:SS
Amount From	This field offers the possibility to restrict the result list to payment transactions of amounts equal to or higher than the value entered in this field. The value entered in this field has to be lower than the value entered in the field 'Amount To'.
Amount To	This field offers the possibility to restrict the result list to payment transactions of amounts smaller than or equal to the value entered in this field. The value entered in this field has to be higher than the value entered in the field 'Amount From'.
Cash Account	Enter the number of the Cash Account. This field is mandatory if the user is neither a NCB user nor the Service Operator. Required format is: max. 34x characters. The field cannot contain wildcards.
Transaction leg	This field offers the possibility to restrict the result list to payment transactions either debiting or crediting the account (or both). Possible values: ▌Credit or Debit ▌Credit ▌Debit Default value: 'Credit or Debit'.
Currency	Field where to enter the currency of the payment transaction as a lookup criterion, from the list of settlement currencies active in TIPS. Default value is EUR.
Reference	Enter the pacs.008 (or pacs.004) transaction Id.
Acceptance Timestamp[14] From	Field where to enter the lower bound for the Acceptance timestamp of the instant payment.

[14] Since the Acceptance Timestamp field is only relevant for the pacs.008 message, for recall responses the Acceptance Timestamp range entered as search criteria will be matched against the internal timestamp of reception of the pacs.004 message in TIPS.

All rights reserved.

	Required format is: YYYY-MM-DD hh:mm:ss This field is mandatory and the default value is five days prior to the current calendar date. If the inserted range exceeds five days, then the following alert will be shown "*Selected interval must be 5 days at most*" and Search button will be temporarily disabled.
Acceptance Timestamp[15] To	Field where to enter the upper bound for the Acceptance timestamp of the instant payment. Required format is: YYYY-MM-DD hh:mm:ss This field is mandatory and the default value is the current calendar date. If the inserted range exceeds five days, then the following alert will be shown "*Selected interval must be 5 days at most*" and Search button will be temporarily disabled.
Status	Select the status of the payment transaction from the possible values: ▌All ▌Settled (default value) ▌Failed ▌Rejected ▌Rejected by the Beneficiary ▌Expired
Error Code	Select the error code of the payment transaction from the possible values: ▌All (default value) ▌AB05 ▌AB06 ▌AB07 ▌AB08 ▌AB09 ▌AB10 ▌AC01 ▌AC03 ▌AC04 ▌AC06 ▌AG01 ▌AG02 ▌AG09 ▌AG10 ▌AG11 ▌AM02 ▌AM04

[15] Since the Acceptance Timestamp field is only relevant for the pacs.008 message, for recall responses the Acceptance Timestamp range entered as search criteria will be matched against the internal timestamp of reception of the pacs.004 message in TIPS.

All rights reserved.

Field description

Advanced Payment transaction status query: Result	
Payment Transaction reference	Shows the reference of the payment transaction
Originator BIC	Shows the BIC code of the Originator Bank of the given transaction
Beneficiary BIC	Shows the BIC code of the Beneficiary Bank of the given transaction
Payment Transaction type	Shows the payment transaction type from the possible values: ▌ Instant Payment ▌ Recall Answer

All rights reserved.

Transaction status	Shows the status of the payment transaction from the possible values: ▌ Settled ▌ Failed ▌ Rejected ▌ Rejected by the Beneficiary ▌ Expired
Reason code	Shows the external ISO error code together with the four-digit internal error code and the user-friendly error description of the payment transaction. The field is empty in case the payment transaction is settled.
Settlement timestamp	Shows the time at which the payment transaction was settled. Displayed format is: YYYY-MM-DD hh:mm:ss:µsµsµsµsµs The field is empty in case the payment transaction is not settled.
Settlement business date	Shows the business date at which the transaction is settled. Displayed format is: YYYY-MM-DD The field is empty in case the payment transaction is not settled.
Payment transaction amount	Shows the amount of the payment transaction
Payment transaction currency	Shows the currency of the payment transaction
Payment transaction end-to-end reference	Shows the end-to-end reference of the payment transaction.
Acceptance timestamp	Shows the Acceptance timestamp of the instant payment. Displayed format is: YYYY-MM-DD hh:mm:ss
Original transaction identification	Shows, in case of recall response, the transaction identifier of the underlying instant payment. The field is empty in case of an Instant Payment transaction.
Payment transaction reception timestamp	Shows the timestamp when the payment transaction is received by TIPS from the originator participant. This timestamp contains the time of last update for payment accepted by TIPS (TIPS network is “stateless” and there is no evidence of the time a message is received). Displayed format is: YYYY-MM-DD hh:mm:ss:µsµsµsµsµs
Payment transaction forwarding timestamp	Shows the timestamp when the payment transaction is forwarded to the beneficiary participant. This timestamp contains the time of last update for payment forwarded by TIPS (TIPS network is “stateless” and there is no evidence of the time a message is sent out). Displayed format is: YYYY-MM-DD hh:mm:ss:µsµsµsµsµs
Confirmation reception timestamp	Shows, if available, the timestamp when the confirmation for a payment transaction is received by TIPS from the beneficiary participant.

All rights reserved.

	This timestamp contains the time of last update for payment confirmed by TIPS (TIPS network is “stateless” and there is no evidence of the time a message is received). Displayed format is: YYYY-MM-DD hh:mm:ss:µsµsµsµsµs
Confirmation to the originator timestamp	Shows, if available, the timestamp when the confirmation for a payment transaction is forwarded by TIPS to the counterpart. This timestamp contains the time of last update for payment notified by TIPS (TIPS network is “stateless” and there is no evidence of the time a message is sent out). Displayed format is: YYYY-MM-DD hh:mm:ss:µsµsµsµsµs
Originator IBAN	Shows the IBAN of the originator of the payment transaction.
Originator name	Shows the name of the originator of the payment transaction.
Beneficiary IBAN	Shows the IBAN of the beneficiary of the payment transaction.
Beneficiary name	Shows the name of the beneficiary of the payment transaction.
Payment transaction local instrument code	Shows the local instrument code of the payment transaction.
Payment transaction remittance information	Shows the remittance information of the payment transaction.

Buttons

Download transaction	This function enables the user to download the original payment transaction[16] (i.e. pacs.008 or pacs.004) in XML format.
Download confirmation	This function enables the user to download the original instant payment confirmation (i.e. the pacs.002) in XML format. The button is not visible in case the Recall Response details are displayed.
Cancel	This function enables the user to cancel the process and return to the previous screen.

4.1.4.5 Query Payment transaction – Advanced Cross-currency Search/List screen

Context of Usage

This screen contains the search criteria that can be used to retrieve the relevant information on cross-currency payment transactions. The user can use multiple search criteria jointly in order to restrict the returned data set of payment transactions. The user can browse through the list using the table buttons. In order to reduce the risk of performance issues, in case of too loose search criteria that may lead to the retrieval of a large number of transactions, the inquiry will limit the displayed result to the most recent 100 payment transactions per page (e.g. up to a maximum of 10 pages).

Furthermore, the user can sort the results acting on each column of the table and, additionally, the user can exclude rows from the result set.

TIPS shall allow the Originator Participant, the Instructing Party acting on behalf of the Originator Participant, the Beneficiary Participant and the Instructing Party acting on behalf

[16] Either the payload of the underlying pacs.008, in case of instant payment, or the pacs.004 in case of Recall Response.

All rights reserved.

of the Beneficiary Participant to query the status of payment transactions, which match the selected search criteria.

For cross-currency transactions, the Exit-Leg PSP and Entry-Leg PSP are also authorised to carry out the query.

This function is only available in U2A mode. If the user does not have the right to view the data relating to the transaction consulted, an error code is returned. As a general remark, every cross-currency payment transaction can be retrieved if either the Originator BIC or the Beneficiary BIC (or both) belongs to the requestor data scope.

In case both legs of the cross-currency transactions are managed in TIPS, the listed results will show in a single row all the information related to the outgoing transaction together with the reference of the incoming flow via field '*Payment Transaction reference of the destination currency cross-currency leg*'. In this scenario all the details related to the incoming flow will be then available via Advanced Payment transaction Search/List screen.

Screen Access

- Payment transaction >> *Advanced Cross-currency Search/List* Screen

Field description

Advanced Cross-currency Payment transaction status query: Search criteria	
Object	**Required Format**
Originator BIC or Entry-Leg PSP BIC	Field where to enter the debtor or intermediary agent BIC. Possible values are: ▌at least 4 and less than 11x characters followed by a wildcard character (*); ▌BIC11 without wildcard character. This field is mandatory.
Beneficiary BIC or Exit-Leg PSP BIC	Field where to enter the creditor or intermediary agent BIC. Possible values are:

All rights reserved.

	▌at least 4 and less than 11x characters followed by a wildcard character (*); ▌BIC11 without wildcard character.
Cash Account	Enter the number of the Cash Account. This field is mandatory if the user is neither a NCB user nor the Service Operator. Required format is: max. 34x characters. The field cannot contain wildcards.
Domestic Transaction leg	This field offers the possibility to restrict the list of results to payment transactions either debiting or crediting the account (or both). Possible values: ▌Credit or Debit ▌Credit ▌Debit Default value: 'Credit or Debit'.
Amount From	This field offers the possibility to restrict the list of results to payment transactions whose amount is equal to or higher than the value entered in this field. The value entered in this field has to be lower than the value entered in the field 'Amount To'.
Amount To	This field offers the possibility to restrict the list of results to payment transactions whose amount is smaller than or equal to the value entered in this field. The value entered in this field has to be higher than the value entered in the field 'Amount From'.
Destination Amount From	This field offers the possibility to restrict the list of results to cross-currency payment transactions whose amount in the destination currency is equal to or higher than the value entered in this field. The value entered in this field has to be lower than the value entered in the field 'Destination Amount To'.
Destination Amount To	This field offers the possibility to restrict the list of results to cross-currency payment transactions whose amount in the destination currency is smaller than or equal to the value entered in this field. The value entered in this field has to be higher than the value entered in the field 'Destination Amount From'.
Exchange Rate From	This field offers the possibility to restrict the list of results to cross-currency payment transactions whose exchange rate is equal to or higher than the value entered in this field. The value entered in this field has to be lower than the value entered in the field 'Exchange Rate To'.
Exchange Rate To	This field offers the possibility to restrict the list of results to cross-currency payment transactions whose exchange rate is equal to or lower than the value entered in this field.

All rights reserved.

	The value entered in this field has to be higher than the value entered in the field 'Exchange Rate From'.
Currency	Field where to enter the currency of the payment transaction as a lookup criterion, from the list of settlement currencies active in TIPS. Default value is EUR. This field is mandatory.
Destination Currency	This field offers the possibility to restrict the list of results to cross-currency payment transactions with destination currency. This field is mandatory.
Settlement business date	Field where to enter the business date of the payment transaction as a lookup criterion. Required format is: YYYY-MM-DD
Corridor	Enter the corridor from the list of active corridors in TIPS. Default value is All.
Status	Select the status of the payment transaction from the possible values: ▌All ▌Settled (default value) ▌Failed ▌Rejected ▌Rejected by the Beneficiary ▌Expired
Error Code	Select the error code of the payment transaction from the possible values: ▌All (default value) ▌AB05 ▌AB06 ▌AB07 ▌AB08 ▌AB09 ▌AB10 ▌AC01 ▌AC03 ▌AC04 ▌AC06 ▌AG01 ▌AG02 ▌AG09 ▌AG10 ▌AG11 ▌AM02 ▌AM04

All rights reserved.

	▪ AM05 ▪ AM09 ▪ AM23 ▪ BE04 ▪ MD07 ▪ MS01 ▪ MS02 ▪ MS03 ▪ TBL1 ▪ TBL2 ▪ CNOR ▪ CUST ▪ DNOR ▪ NOAS ▪ RR01 ▪ RR02 ▪ RR03 ▪ RR04
Acceptance Timestamp From	Field where to enter the lower bound for the Acceptance timestamp of the instant payment. Required format is: YYYY-MM-DD hh:mm:ss This field is mandatory and the default value is five days prior to the current calendar date. If the inserted range exceeds five days, then the following alert will be shown "*Selected interval must be 5 days at most*" and Search button will be temporarily disabled.
Acceptance Timestamp To	Field where to enter the upper bound for the Acceptance timestamp of the instant payment. Required format is: YYYY-MM-DD hh:mm:ss This field is mandatory and the default value is the current calendar date. If the inserted range exceeds five days, then the following alert will be shown "*Selected interval must be 5 days at most*" and Search button will be temporarily disabled.
Settlement Timestamp From	This field offers the possibility to restrict the list of results to payment transactions whose settlement timestamp is equal to or higher than the value entered in this field. Required format is: YYYY-MM-DD HH:MM:SS
Settlement Timestamp To	This field offers the possibility to restrict the list of results to payment transactions whose settlement timestamp is smaller than or equal to the value entered in this field. Required format is: YYYY-MM-DD HH:MM:SS

All rights reserved.

Advanced Cross-currency Payment transaction status query - List	
Cross-currency Payment Transaction reference	Shows the reference of the cross-currency payment transaction
Originator BIC	Shows the BIC code of the Originator PSP of the given cross-currency payment transaction.
Beneficiary BIC	Shows the BIC code of the Beneficiary PSP of the given cross-currency payment transaction.
Exit-Leg PSP BIC	Shows the BIC code of the Exit-Leg PSP of the of the given cross-currency payment transaction.
Entry-Leg PSP BIC	Shows the BIC code of the Entry-Leg PSP of the of the given cross-currency payment transaction.
Settlement business date	Shows the business date on which the cross-currency payment transaction is settled. Displayed format is: YYYY-MM-DD The field is empty in case the transaction is not settled.
Corridor	Show the corridor of the cross-currency payment transaction.
Settlement Timestamp	Shows the time the cross-currency payment transaction was settled. Displayed format is: YYYY-MM-DD hh:mm:ss:µsµsµs. The field is empty in case the transaction is not settled.
Amount	Shows the amount of the cross-currency payment transaction.
Currency	Shows the currency of the cross-currency payment transaction.
Destination Amount	Shows the amount of the cross-currency payment transaction in the destination currency.
Destination Currency	Shows the destination currency of the cross-currency payment transaction.
Exchange Rate	Shows the exchange rate of the cross-currency payment transaction.
Transaction leg	This field shows the leg of the transaction from the possible values: - Credit or Debit - Credit - Debit
Acceptance Timestamp	Shows the Acceptance timestamp of the cross-currency payment transaction. Displayed format is: YYYY-MM-DD hh:mm:ss:µsµsµs

All rights reserved.

Status	Shows the status of the cross-currency payment transaction from the possible values: - Settled - Failed - Rejected - Rejected by the Beneficiary - Expired
Payment Transaction reference of the destination currency cross-currency leg	For cross-currency transactions managed by TIPS as destination CSM, shows the reference of the destination leg cross-currency payment transaction. It is empty in all the other cases.
Error Code	Shows the error code of the payment transaction. The field is empty in case the payment transaction is settled.
Internal Error Code	Shows the internal error code of the payment transaction. Furthermore, the user-friendly error description is provided: a tooltip appears when hovering over the Internal Error Code cell in the result grids, and a dedicated column is included in the exported file.

Buttons

Search	This function enables the user to retrieve the information on the selected payment transactions.
Details	This function enables the user to display the information on the selected payment transaction.
Reset	This function enables the user to set the search criteria fields to their default values.
Export	This function enables the user to export the result of the executed query in a csv-file. In addition to the results, the following information is exported at the start of the file: name of the exported screen (including menu path), current date, name of the user who triggered the exporting, classification label 'RESTRICTED', timestamp of the export, defined search criteria (query parameters, if applicable).

4.1.4.6 Advanced Cross-currency Payment transaction query – Display screen

Context of Usage

This screen displays detailed information on the relevant payment transaction. This function is available in U2A mode only. In case the user is not entitled to view the data on the searched transaction, an error code is returned. For a recall answer, the Originator and Beneficiary BIC, IBAN, and Name fields displayed on the screen are mapped to the corresponding Creditor/Debtor sections of the underlying pacs.004 message.

Screen Access

- Payment transaction – Advanced Cross-currency *Search/List* Screen >> Click on the *Details* button

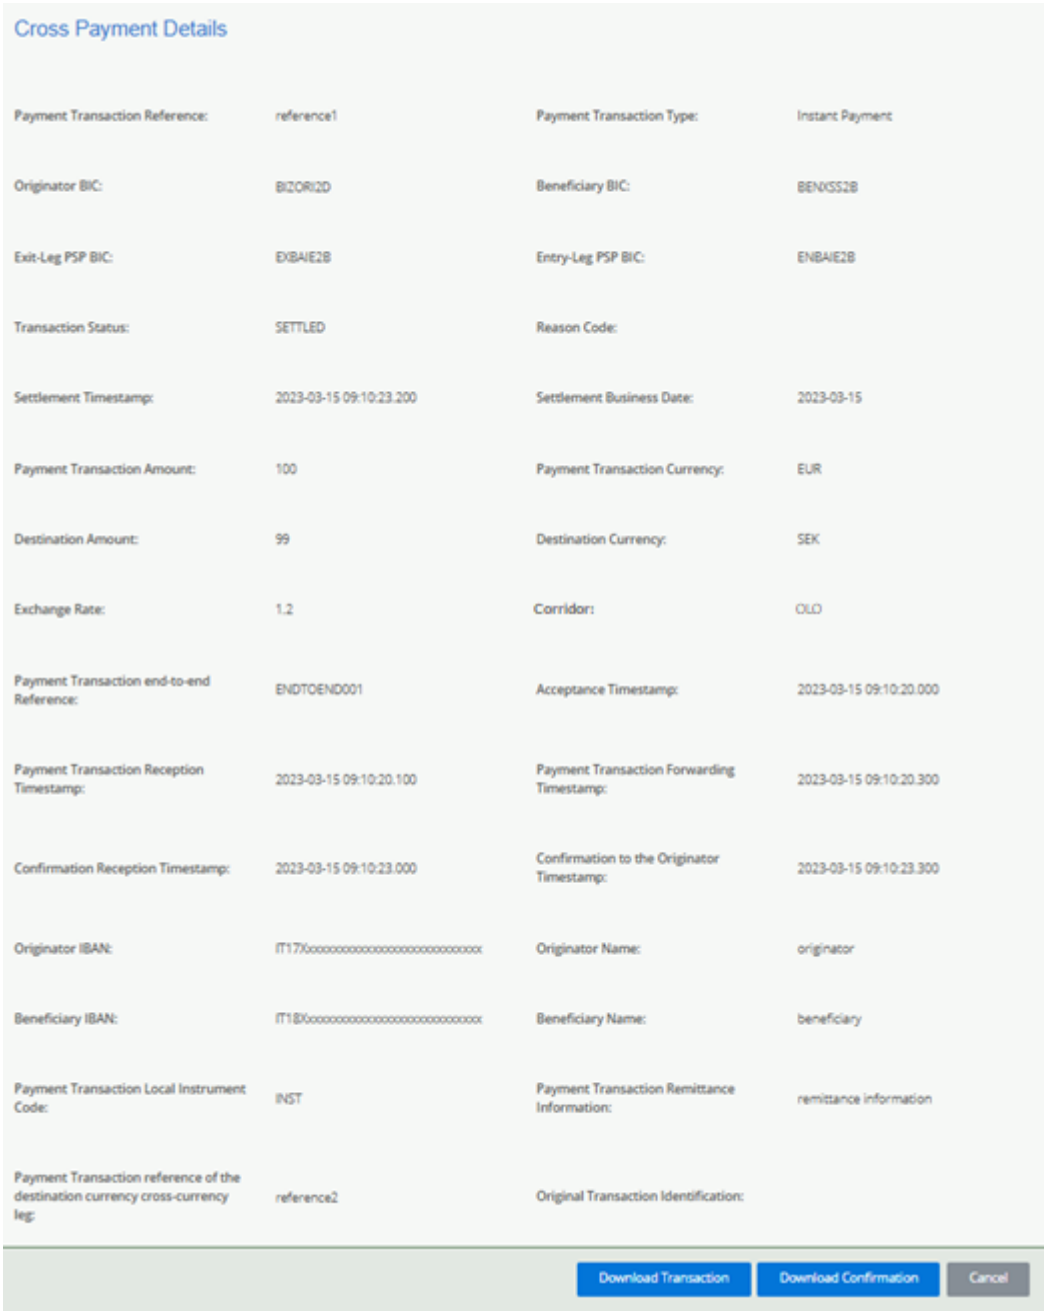

All rights reserved.

Privileges

To use this screen, the following Privileges are needed:

- TIP_Query
- TIP_QueryReachable

Screenshot

Field description

Advanced Cross-currency Payment transaction status query: Result	
Payment Transaction reference	Shows the reference of the cross-currency payment transaction
Payment Transaction type	Shows the payment transaction type from the possible values: - Cross-currency Instant Payment

All rights reserved.

Originator BIC	Shows the BIC code of the Originator Bank of the given transaction
Beneficiary BIC	Shows the BIC code of the Beneficiary Bank of the given transaction
Exit-Leg PSP BIC	For cross-currency transactions only. shows the BIC code of the Exit-Leg PSP of the of the given cross-currency payment transaction.
Entry-Leg PSP BIC	For cross-currency transactions only. shows the BIC code of the Entry-Leg PSP of the of the given cross-currency payment transaction.
Transaction status	Shows the status of the cross-currency payment transaction from the possible values: ▌ Settled ▌ Failed ▌ Rejected ▌ Rejected by the Beneficiary ▌ Expired
Reason code	Shows the external ISO error code together with the four-digit internal error code and the user-friendly error description of the cross-currency payment transaction. The field is empty in case the cross-currency payment transaction is settled.
Settlement timestamp	Shows the time the cross-currency payment transaction was settled. Displayed format is: YYYY-MM-DD hh:mm:ss:µsµsµsµsµs The field is empty in case the payment transaction is not settled.
Settlement business date	Shows the business date on which the transaction is settled. Displayed format is: YYYY-MM-DD The field is empty in case the payment transaction is not settled.
Payment transaction amount	Shows the amount of the payment transaction
Payment transaction currency	Shows the currency of the payment transaction
Destination Amount	Shows the amount of the cross-currency payment transaction in the destination currency.
Destination Currency	Shows the destination currency of the cross-currency payment transaction.
Exchange Rate	Shows the exchange rate of the cross-currency payment transaction.
Corridor	Shows “OLO” in case of OLO transactions, “ELKT” in case of Enhanced Linked Transaction model, the specific corridor name in case of the cross-currency payment transaction with a Linked IPS

All rights reserved.

Payment transaction end-to-end reference	Shows the end-to-end reference of the payment transaction.
Acceptance timestamp	Shows the Acceptance timestamp of the instant payment. Displayed format is: YYYY-MM-DD hh:mm:ss
Payment transaction reception timestamp	Shows the timestamp when the payment transaction is received by TIPS from the originator PSP (or from the linked IPS only in case of transactions incoming in TIPS from another IPS). This timestamp contains the time of last update for payment accepted by TIPS (TIPS network is “stateless” and there is no evidence of the time a message is received). Displayed format is: YYYY-MM-DD hh:mm:ss:µsµsµsµsµs
Payment transaction forwarding timestamp	Shows the timestamp when the payment transaction is forwarded to the Exit Leg PSP (or the beneficiary PSP only in case of transactions incoming in TIPS from another IPS). This timestamp contains the time of last update for payment forwarded by TIPS (TIPS network is “stateless” and there is no evidence of the time a message is sent out). Displayed format is: YYYY-MM-DD hh:mm:ss:µsµsµsµsµs
Confirmation reception timestamp	Shows, if available, the timestamp when the confirmation for a payment transaction is received by TIPS from the Exit Leg PSP (or the beneficiary PSP only in case of transactions incoming in TIPS from another IPS). This timestamp contains the time of last update for payment confirmed by TIPS (TIPS network is “stateless” and there is no evidence of the time a message is received). Displayed format is: YYYY-MM-DD hh:mm:ss:µsµsµsµsµs
Confirmation to the originator timestamp	Shows, if available, the timestamp when the confirmation for a payment transaction is forwarded by TIPS to the Exit Leg PSP (or the linked IPS only in case of transactions incoming in TIPS from another IPS). This timestamp contains the time of last update for payment notified by TIPS (TIPS network is “stateless” and there is no evidence of the time a message is sent out). Displayed format is: YYYY-MM-DD hh:mm:ss:µsµsµsµsµs
Originator IBAN	Shows the IBAN of the originator of the payment transaction.
Originator name	Shows the name of the originator of the payment transaction.
Beneficiary IBAN	Shows the IBAN of the beneficiary of the payment transaction.
Beneficiary name	Shows the name of the beneficiary of the payment transaction.
Payment transaction local instrument code	Shows the local instrument code of the payment transaction.

All rights reserved.

Payment transaction remittance information	Shows the remittance information of the payment transaction.
Payment Transaction reference of the destination currency cross-currency leg	For cross-currency transactions managed by TIPS as originator and destination CSM for both currencies hold in TIPS, shows the reference of the other leg cross-currency payment transaction, to be used to perform a dedicated Advanced Payment transaction query. It is empty in all the other cases.
Original transaction identification	Shows, in case of recall response, the transaction identifier of the underlying instant payment. The field is empty in case of an Instant Payment transaction.

Buttons

Download transaction	This function enables the user to download the original cross-currency payment transaction[17] (i.e. pacs.008) in XML format.
Download confirmation	This function enables the user to download the original cross-currency instant payment confirmation (i.e. the pacs.002) in XML format.
Cancel	This function enables the user to cancel the process and return to the previous screen.

4.1.5 Query Broadcast

The Broadcast query allows the authorised actor to search for broadcasts, which are still available in the system[18].

4.1.5.1 Broadcast – Search/List screen

Context of Usage

This screen contains a number of search fields. By inputting the relevant data, the user can look up and display the list of broadcast messages that are currently available in TIPS. The search results will be displayed in a list, which is sorted by the values of the Timestamp related to the creation of the broadcast in descending order.

Users belonging to Central Banks, TIPS Participants, TIPS Ancillary Systems and Reachable Parties are entitled to view broadcasts addressed to all users and to users of their currency. The Operator can view all broadcasts.

Screen Access

- Broadcast box >> Click on the *Broadcast* button >> *Search/List* Screen

Privileges

To access this screen, the following Privilege is needed:

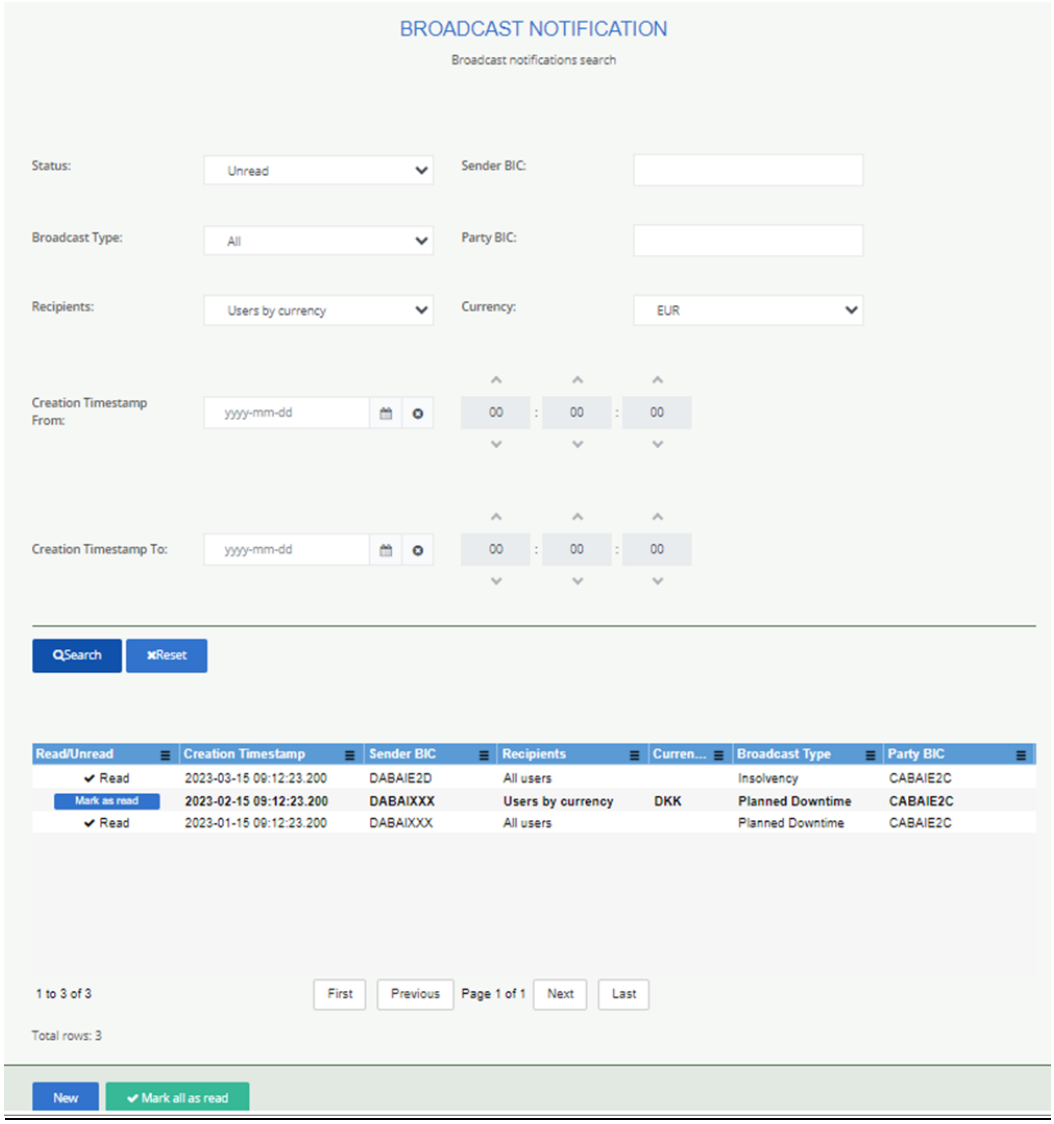

- TIP_ViewBroadcast

[17] Payload of the underlying pacs.008 cross-currency instant payment.

[18] The retention period of the broadcast messages will be three months.

All rights reserved.

Screenshot

Field description

Broadcast: Search criteria	
Status	Select the status of the broadcast from the possible values: ▌All ▌Unread (Default Value) ▌Read
Sender BIC	Enter or select the BIC of the sender. Format is BIC11. (References for error messages will be included)
Broadcast Type	Select the type of broadcast from the possible values: ▌All (Default Value) ▌Immediate Downtime Start ▌Immediate Downtime End ▌Planned Downtime ▌Insolvency ▌Free Text

All rights reserved.

Party BIC	Enter or select the BIC of the party to which the broadcast refers. Format is BIC8 or BIC11.
Recipients	Select the recipients of the broadcast from the possible values: ▌All (Default Value) ▌All Users ▌Users by currency
Currency	Select the currency from the list of settlement currencies available in TIPS. This search criterion is enabled only when 'Users by currency' is selected in the Recipients field. It is disabled in all the other scenarios. Default value is EUR.
Creation Timestamp From	Enter the lower bound of the date and time from which the broadcast was created or use the calendar icon. Required format is: YYYY-MM-DD hh:mm:ss
Creation Timestamp To	Enter the upper bound of the date and time from which the broadcast was created or use the calendar icon. Required format is: YYYY-MM-DD hh:mm:ss

Broadcast: List	
Status	Shows the status of the broadcast. Possible values are: ▌Unread ▌Read
Creation Timestamp	Shows the timestamp at which the broadcast was created. Displayed format is: YYYY-MM-DD hh:mm:ss
Sender BIC	Shows the BIC of the sender. Displayed format is: BIC11
Recipients	Shows the recipients of the broadcast. Possible values are: ▌All Users ▌Users by currency
Currency	Shows the currency to which the broadcast refers to. The field is empty if the Broadcast has been dispatched to 'All Users'.
Broadcast Type	Shows the type of broadcast. Possible values are: ▌Immediate Downtime Start ▌Immediate Downtime End ▌Planned Downtime ▌Insolvency ▌Free Text
Party BIC	Shows the BIC of the party to which the broadcast refers. Displayed format is: BIC8 or BIC11

All rights reserved.

Buttons

Search	This function enables the user to start a search according to the criteria entered. The results are displayed in a list on the same screen. If the search retrieves a single record, the details screen is displayed.
Reset	This function enables the user to set all fields to default value and blanks out all optional fields.
Details	This function enables the user to display the details of the selected broadcast.
New	This function enables the user to access the Broadcast – New screen.
Mark all as read	This function marks all broadcast messages as read.

4.1.5.2 Broadcast – Details screen

Context of Usage

This screen allows the authorised actor to get detailed information on the selected broadcast. The status of the broadcast is updated automatically when details are displayed to the user. The broadcast status is then set to 'Read'.

Screen Access

- Broadcast box >> Click on the *Broadcast* button >> *Search/List* Screen >> *List* screen >> Click on the *Details* button
- Broadcast box >> Click on the preview of the unread broadcast displayed in the Broadcast box.

Privileges

To access this screen, the following Privilege is needed:

- TIP_ViewBroadcast

Screenshot

Field description

Broadcast - Details	
Object	**Description**

All rights reserved.

Status	Shows the status of the broadcast. Possible values are: ▌Unread ▌Read
Creation Timestamp	Shows the timestamp at which the broadcast was created. Displayed format is: YYYY-MM-DD hh:mm:ss
Sender BIC	Shows the BIC of the sender. Displayed format is: BIC11
Recipients	Shows the recipients of the broadcast. Possible values are: ▌All Users ▌Users by currency
Currency	Shows the currency to which the broadcast refers to. The field is empty if the Broadcast has been dispatched to 'All Users'.
Broadcast Type	Shows detailed information about the type of broadcast. Possible values are: ▌Immediate Downtime Start ▌Immediate Downtime End ▌Planned Downtime ▌Insolvency ▌Free Text
Party BIC	Shows the BIC of the party to which the broadcast refers. Displayed format is: BIC8 or BIC11
Planned Downtime Start	If the type of the selected broadcast is 'Planned Downtime', the field shows the timestamp as of which the downtime is expected to start, expressed in UTC format. Displayed format is: YYYY-MM-DD hh:mm:ss
Planned Downtime End	If the type of the selected broadcast is 'Planned Downtime', the field shows the timestamp as of which the downtime is expected to terminate, expressed I UTC format. Displayed format is: YYYY-MM-DD hh:mm:ss
Text	Shows the text content of the broadcast.

4.2 Blocking

Due to the level of criticality entailed in the blocking of a TIPS Actor, Account or CMB, the function is made available in TIPS in real-time and on a 24/7/365 basis. These changes in the configuration of the said Reference Data objects are done using the same input stream of the Instant Payments.

All rights reserved.

4.2.1 Party Blocking

The Actor can be blocked for crediting and/or debiting directly in TIPS and the relevant data changes will be taken into account in real-time on a 24/7/365 basis. These operations are carried out by authorised users directly in TIPS via the TIPS interface and processed in the same flow as Instant Payment transactions. The operations can be carried out by an authorised user of the Central Bank of the TIPS Participant holding the relevant Account or by an authorised user of the TIPS Operator (only in contingency situations).

Blocking a TIPS Participant or an Ancillary System for debiting/crediting results in an equivalent blocking on all the accounts owned by that TIPS Participant or Ancillary System and all the CMBs linked to those Accounts. The individual Account and CMB blocking status is not overwritten. When crediting or debiting a TIPS Account, TIPS also checks the owner Party blocking status. If the owner is blocked, the whole payment operation is rejected. Unblocking the TIPS Participant or the Ancillary System means that all of its accounts and CMBs revert back to their individual blocking status.

Blocking/Unblocking status is also available in the CRDM; any change that is propagated from the CRDM to TIPS does not overwrite these values if they have been changed within TIPS via an immediate change. In such a scenario, the value in CRDM must be first aligned to the one in TIPS; following this alignment, any update becomes again possible in CRDM.

The possible values that an Actor can assume are:

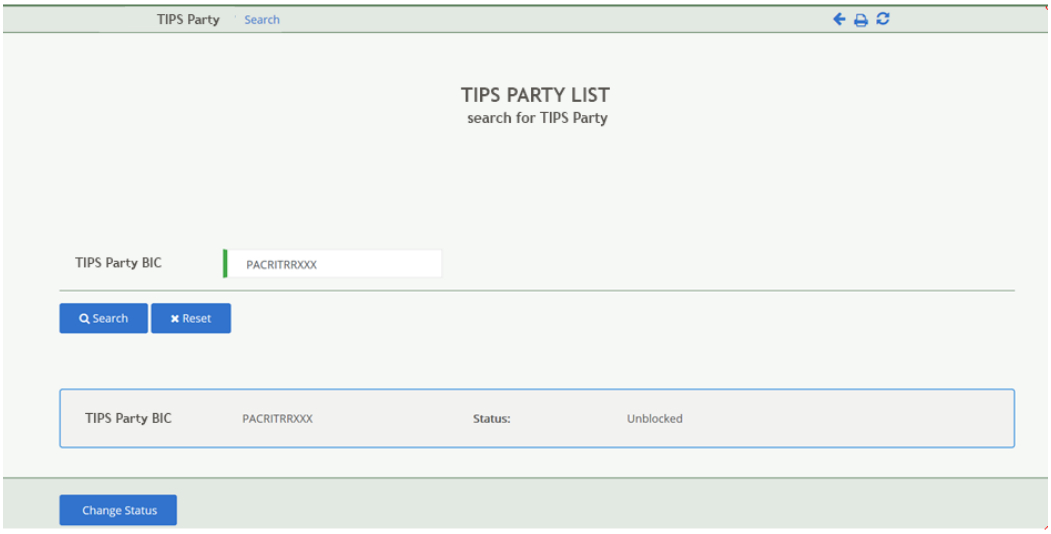

- Unblocked;
- Blocked for debiting;
- Blocked for crediting;
- Blocked for crediting/debiting.

4.2.1.1 TIPS Party– Search/Display Screen

Context of Usage	This screen contains the BIC of the TIPS Participant or Ancillary System whose Blocking status has to be changed as the only available search field. Party data can only be viewed by the relevant Central Bank which created and maintains it. This function is available in both U2A and A2A mode.
Screen Access	▪ TIPS Party >> *Search/display* screen
Privileges	To use this screen, the following Privileges are needed: ▪ TIP_Query ▪ TIP_QueryReachable ▪ TIP_ModifyAllBlocking

All rights reserved.

Screenshot

Field description

TIPS Participant/Ancillary System Blocking	
TIPS Party BIC	Shows the BIC of the Party whose Blocking status the user is checking
Status	Shows the blocking status of the TIPS Participant or Ancillary System. Possible values are: Unblocked, Blocked for Debiting, Blocked for Crediting, Blocked for Crediting/Debiting

Buttons

Search	This function enables the user to Search the Blocking status of the selected TIPS Participant or Ancillary System. References for error messages: [▸]: ▌R010
Reset	This function enables the user to set the field to default value
Change Status	This function enables to access the Change Status screen where to modify the Blocking status of the TIPS Participant or Ancillary System. References for error messages: [▸]: ▌R009

All rights reserved.

4.2.1.2 TIPS Party – Change Status Screen

Context of Usage

This screen contains a number of fields regarding the Actor Blocking. The user can enter a blocking status, modify an existing blocking status or remove an existing blocking status. The user can use this screen either in 2-eyes or in 4-eyes mode. This function is available in both U2A and A2A mode.

Screen Access

- TIPS Party >> *Search/display* Screen >> Click on the *Search* button >>

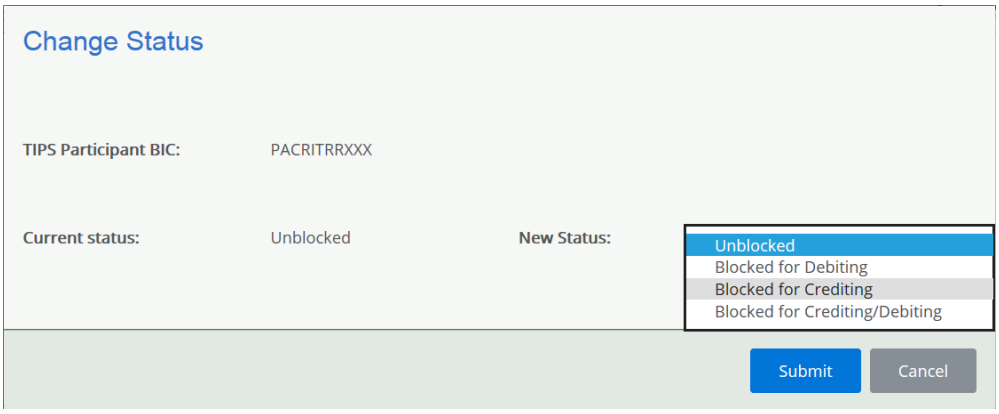

Click on the *Change Status* button

Privileges

To use this screen, the following Privilege is needed:

- TIP_ModifyAllBlocking

Screenshot

Field description

TIPS Party blocking	
Object	**Description**
TIPS Party BIC	Shows the BIC of the Party whose Blocking status the user is modifying
Current status	Shows the current blocking status of the TIPS Participant or Ancillary System.
New Status	Drop-down menu where to choose the new value of the Blocking status. Possible values are: Unblocked, Blocked for Debiting, Blocked for Crediting, Blocked for Crediting/Debiting. In case the actor chooses a New Status that is identical to the Current status, an error message appears

All rights reserved.

Buttons		
	Submit	This function enables the user to Submit the desired Blocking status for the TIPS Party. Upon clicking on the submit button the requestor will be asked to enter the PIN for digital signature purposes (NRO). With the entry of the PIN, TIPS attaches a digital signature to the instruction entered by the TIPS actor
	Cancel	This function enables the user to cancel the process and return to the previous screen

4.2.2 Account Blocking

The Account can be blocked for crediting and/or debiting directly in TIPS and the relevant data changes will be taken into account in real-time on a 24/7/365 basis. These operations are carried out by authorised users directly in TIPS via the TIPS interface and processed in the same flow as Instant Payment transactions. The operations can be carried out by an authorised user of the Central Bank of the TIPS Actor holding the relevant Account or by an authorised user of the TIPS Operator (only in contingency situations). Blocking/Unblocking status is also available in the CRDM; any change that is propagated from the CRDM to TIPS does not overwrite these values if they have been changed within TIPS via an immediate change. In such a scenario, the value in CRDM must be first aligned to the one in TIPS; following this alignment, any update becomes again possible in CRDM.

The possible values that an Account can assume are:

- Unblocked;
- Blocked for debiting;
- Blocked for crediting;
- Blocked for crediting/debiting.

The blocking status of an Account or a CMB is not taken into account in case the owner holding the account or the CMB is blocked. Only once the TIPS Party is unblocked the blocking status of the related account and CMB is taken into consideration.
Blocking an account for debiting/crediting results in an equivalent blocking on all CMBs linked to that account. The individual CMB blocking status is not overwritten. When crediting or debiting a CMB, TIPS also credits or debits the related account. If this account is blocked, the whole payment operation is rejected. Unblocking the account means that all linked CMBs revert back to their individual blocking status.

4.2.2.1 Account Blocking – Search/display Screen

Context of Usage	This screen contains the ID of the account whose Blocking status has to be changed as the only available search field. Account data can only be viewed by the relevant Central Bank which created and maintains it. This function is available in both U2A and A2A mode.
Screen Access	Account >> *Search/display* screen >> Click on the *Search* button

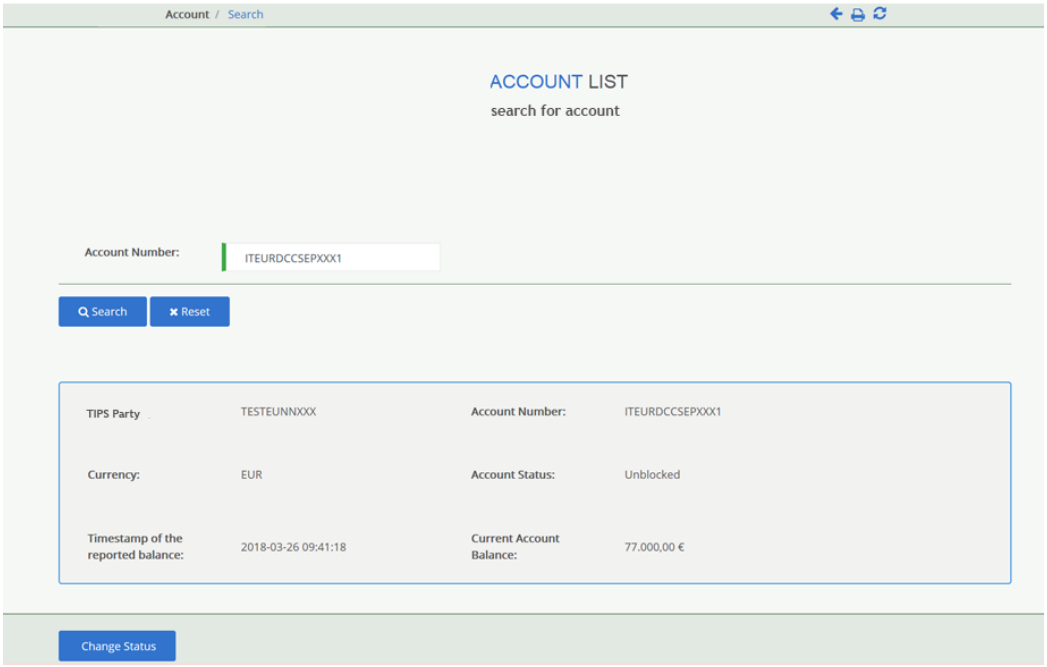

All rights reserved.

Current status	Shows the current blocking status of the account.
New Status	Drop-down menu where to choose the new value of the Blocking status. Possible values are: Unblocked, Blocked for Debiting, Blocked for Crediting, Blocked for Crediting/Debiting. In case the actor chooses a New Status that is identical to the Current status, an error message appears

Buttons

Submit	This function enables the user to Submit the desired Blocking status for the account. Upon clicking on the submit button the user will be asked to enter their PIN for digital signature purposes (NRO). With the entry of the PIN, TIPS attaches a digital signature to the instruction entered by the TIPS actor
Cancel	This function enables the user to cancel the process and return to the previous screen

4.2.3 CMB Blocking

The CMB can be blocked for crediting and/or debiting directly in TIPS and the relevant data changes will be taken into account in real-time on a 24/7/365 basis. These operations are carried out by authorised users directly in TIPS via the TIPS interface and processed in the same flow as Instant Payment transactions. The operations can be carried out by (i) an authorised user of the TIPS Actor holding the account, (ii) the Central Bank of the TIPS Actor holding the account, (iii) the Instructing Party authorised by the TIPS Actor or (iv) by an authorised user of the TIPS Operator (only in contingency situations).
Blocking/Unblocking status is also available in the CRDM; any change that is propagated from the CRDM to TIPS does not overwrite these values if they have been changed within TIPS via an immediate change. In such a scenario, the value in CRDM must first be aligned to the one in TIPS; following this alignment, any update becomes again possible from CRDM.
The possible values that a CMB can assume are:

- Unblocked;
- Blocked for debiting;
- Blocked for crediting;
- Blocked for crediting/debiting.

The blocking status of a CMB is not taken into account in case the relevant Account or the Party holding the Account are blocked. Only once the TIPS Actor and the account are unblocked the blocking status of the related CMBs is taken into consideration.

All rights reserved.

4.2.3.1 CMB Blocking – Search/display screen

Context of Usage

This screen contains the ID of the CMB whose Blocking status has to be changed as the only available search field. This function is available in both U2A and A2A mode.

Screen Access

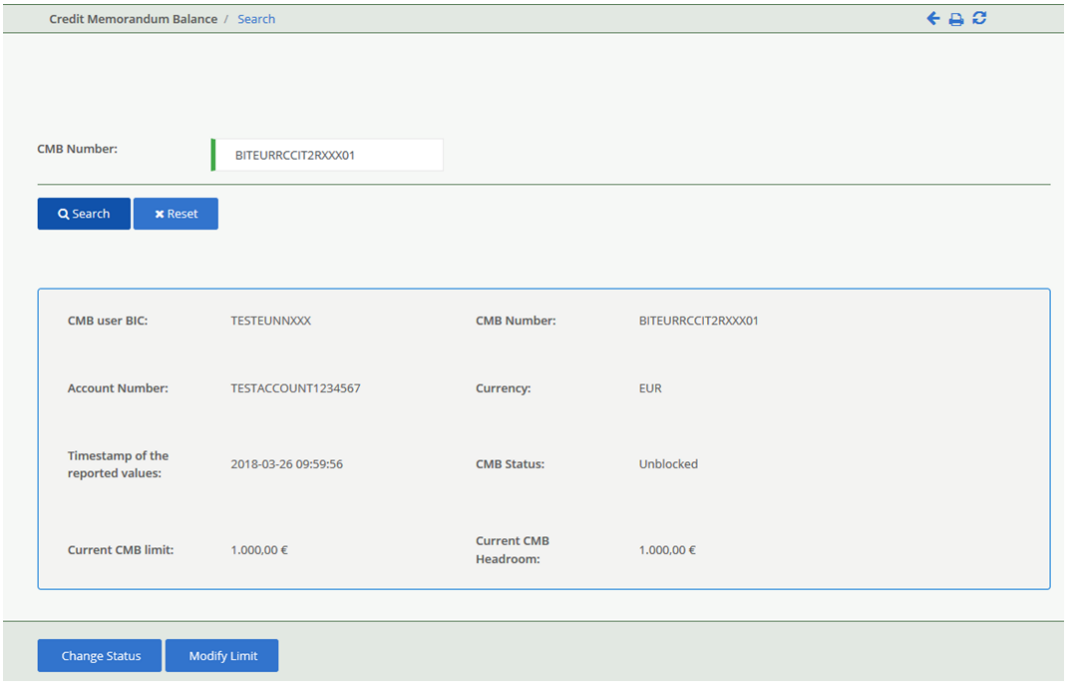

- Credit Memorandum Balance >> *Search/display* screen >> Click on the *Search* button

Privileges

To use this screen, the following Privileges are needed:

4.2.3.2 CMB Blocking – Change Status Screen

Context of Usage This screen contains a number of fields regarding the CMB Blocking. The user can enter a blocking status, modify an existing blocking status or delete an existing blocking status. The user can use this screen either in 2-eyes or in 4-eyes mode. This function is available in both U2A and A2A mode.

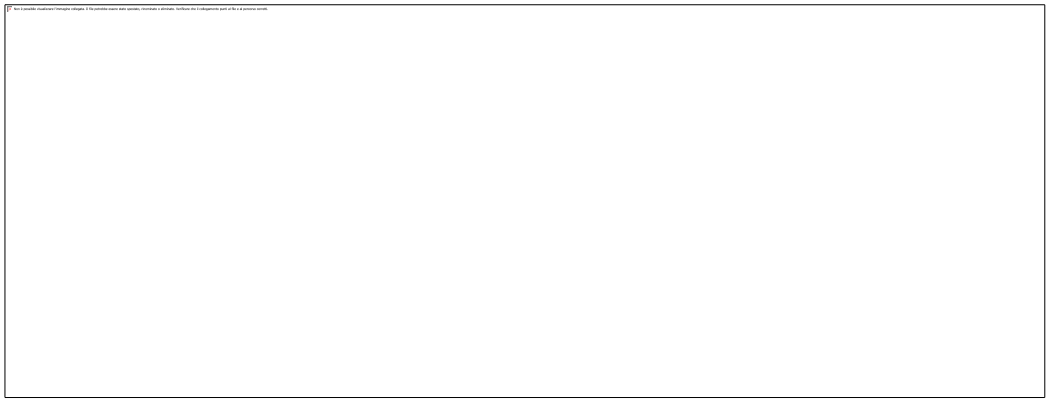

Screen Access ▌Credit Memorandum Balance >> *Search/display* screen >> Click on the *Search* button >> Click on the *Change Status* Button

Privileges To use this screen, the following Privilege is needed:

▌TIP_ModifyCMBBlocking

All rights reserved.

Screenshot

Field description

CMB Blocking	
Object	**Description**
CMB Number	Shows the ID of the CMB whose Blocking status the user is modifying
Current status	Shows the current blocking status of the TIPS CMB.
New Status	Drop-down menu where to choose the new value of the Blocking status. Possible values are: Unblocked, Blocked for Debiting, Blocked for Crediting, Blocked for Crediting/Debiting. In case the actor chooses a New Status that is identical to the Current status, an error message appears

Buttons

Submit	This function enables the user to Submit the desired Blocking status for the CMB. Upon clicking on the submit button the user will be asked to enter the PIN for digital signature purposes (NRO). With the entry of the PIN, TIPS attaches a digital signature to the instruction entered by the TIPS actor
Cancel	This function enables the user to cancel the process and return to the previous screen.

4.3 Limit management

The limit is the maximum amount of liquidity available for a CMB. It is the sum of the utilisation (amount of cash used for that CMB) and the headroom (amount of cash still available for that CMB). It can be modified at all times directly in TIPS. Limit management functions are also available in the CRDM.

A CMB can be defined without a limit. In this case, it is possible to make full use of the capacity of the related Account without any limitation. For unlimited CMBs, the headroom must always be considered infinite and, conversely, the utilisation always zero.

CMBs offer the possibility to define limit management flexibly on an account without dedicating liquidity exclusively for each single customer. Specifically, the sum of all CMB limits on an account can be higher than the balance of the same account at any time.

The CMB limit can be modified independently as a reference data update directly in TIPS (although the service is available also on the CRDM), which leads to the headroom being recalculated accordingly.

If a limit is set for a previously unlimited CMB, the headroom and utilisation are calculated starting from the moment the limit is set. In other words, the headroom is automatically set to the same value as the limit,

All rights reserved.

while the utilisation remains zero. These values are then normally updated with each subsequent payment transaction and limit change.
When a CMB limit is modified, the headroom and utilisation are updated accordingly. It is possible that a change in a limit leads the headroom to become negative, after which the CMB will only accept Instant Payments in credit until the headroom is again more than zero.
The increase and reduction of a CMB limit has no effect on the values of the other possible CMB limits linked with the same account.

4.3.1 CMB Limit modification

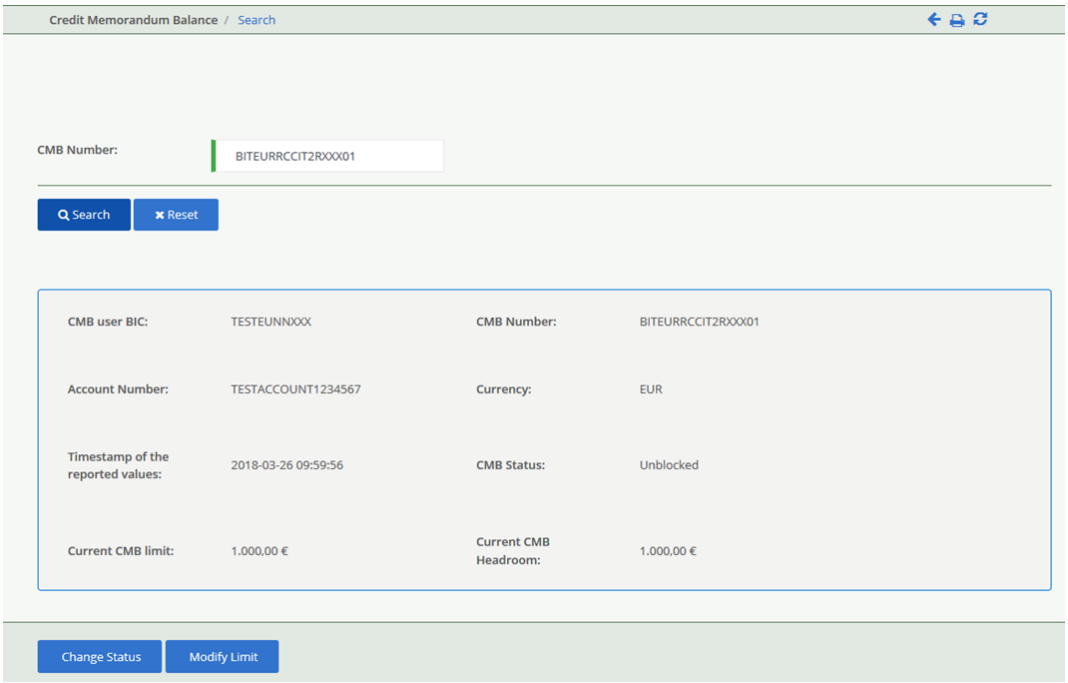

The limit is the only CMB feature, together with the blocking feature, that can be modified in A2A and U2A mode directly in TIPS.
The new limit is immediately taken into consideration after it is set, i.e. the headroom and the utilisation are calculated starting from the moment the limit is modified.
The limit can be modified directly in TIPS and the relevant data changes will be taken into account in real-time on a 24/7/365 basis. These operations are carried out by authorised users directly in TIPS and processed in the same flow as Instant Payment transactions. The operations can be carried out by the TIPS Actor holding the account, by the relevant Central Bank, by an Instructing Party authorised by the TIPS Actor or by the TIPS Operator (only in contingency situations).
Limit update is also available in the CRDM.

4.3.1.1 CMB Limit Modification – Search/display screen

Context of Usage	This screen contains the ID of the CMB as the only available search field. By inputting the relevant data, the user can add, modify or delete the limit of the searched CMB. CMB data can only be viewed by the Account Owner, the relevant Central Bank which created and maintains it and the relevant Instructing Party, if granted the necessary privileges. The lower part of the screen shows detailed information about the CMB.
Screen Access	▪ Credit Memorandum Balance >> *Search/display* screen >> Click on the *Search* button
Privileges	To use this screen, the following Privileges are needed: ▪ TIP_Query ▪ TIP_QueryReachable ▪ TIP_AdjustCMBLimit

4.3.1.2 CMB Limit Modification – Modify Limit screen

Context of Usage

This screen contains a number of fields regarding the CMB Limit. The user can enter a new Limit or set the CMB to Unlimited. This screen can be used either in 2-eyes or in 4-eyes mode. This function is available in both U2A and A2A mode.

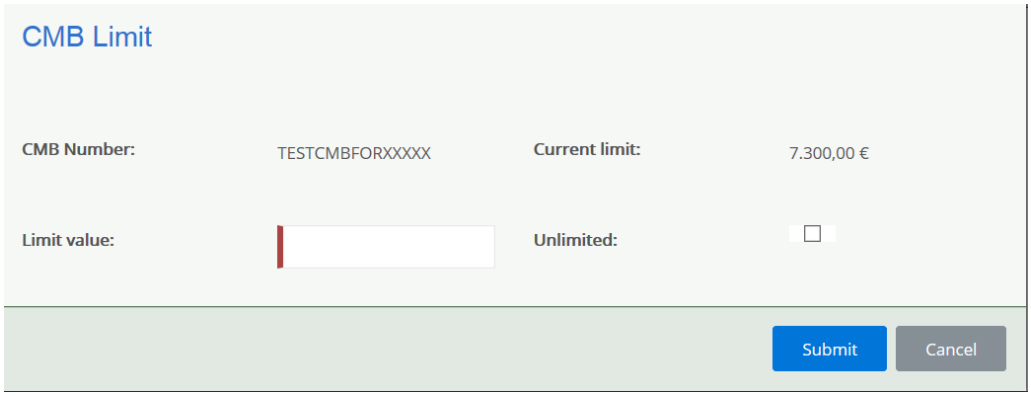

Screen Access

▪ Credit Memorandum Balance >> *Search/display* screen >> Click on the *Search* button >> Click on the *Modify Limit* button

Privileges

To use this screen, the following Privilege is needed:
▪ TIP_AdjustCMBLimit

Screenshot

Field description

CMB Limit Modification	
Object	**Description**
CMB Number	Shows the ID of the CMB, which is unique in TIPS and whose Limit the user wants to create or update
Current Limit	Shows the current Limit of the TIPS CMB

All rights reserved.

Limit Value	Field where to enter the amount of the Limit for the CMB. In case the actor inserts a Limit that is identical to the Current Limit, an error message appears. In case the actor inserts a value the Unlimited value Radio button will not be available
Unlimited value	Radio button to fill with a checkmark in case the user wants to set the Limit value of the CMB to Unlimited. In case the Current limit is already unlimited this button is not available

Buttons

Submit	This function enables to create or modify a CMB Limit according to the information entered. Upon clicking on the submit button the user will be asked to enter their PIN for digital signature purposes (NRO). With the entry of the PIN, TIPS attaches a digital signature to the instruction entered by the TIPS actor
Cancel	This function enables the user to cancel the process and return to the previous screen.

4.4 Liquidity Transfer

TIPS supports Central Bank Money liquidity transfers between accounts denominated in the same currency from TIPS to an RTGS System (Outbound) or vice versa from an RTGS System to TIPS (Inbound). TIPS also enables liquidity transfers between two TIPS Accounts belonging to the same account holder or between a TIPS Account and a TIPS AS Technical Account denominated in the same currency (intra-service) The intra-service liquidity transfer is used to (i) move liquidity between two TIPS Accounts belonging to the same account holder or (ii) to fund/defund a TIPS AS Technical Account to allow Ancillary Systems to process Instant Payments.

Outbound and intra-service Liquidity Transfers can be triggered in A2A and in U2A via a dedicated TIPS GUI screen and are executed immediately. The process foresees that an authorised entity, e.g. a TIPS Participant, Ancillary System, Instructing Party, if having necessary privileges, or Central Bank acting on behalf, triggers a Liquidity Transfer order, in the form of a Liquidity Transfer message. For Outbound Liquidity Transfers, a target RTGS Account must be specified. No reservation of funds occurs in this scenario and settlement takes place immediately.

4.4.1 Liquidity Transfer functionality

This section describes the processing of :

(i) an Outbound Liquidity Transfer order sent by a Central Bank, a TIPS Participant, Ancillary System or an Instructing Party acting on behalf of the TIPS Participant in order to transfer liquidity from a TIPS Account to a credited Account (e.g. an RTGS account for non-euro currency LT, a T2-CLM account for euro LT or a T2S DCA),

(ii) an Intra-service Liquidity Transfer order sent by a Central Bank, a TIPS Participant, Ancillary System or Instructing Party acting on behalf of the TIPS Participant in order to transfer liquidity between two TIPS Accounts belonging to the same account holder or from a TIPS Account to a TIPS AS Technical account,

All rights reserved.

(iii) an Intra-service Liquidity Transfer order sent by a Central Bank, an Ancillary System or an Instructing Party acting on behalf of the Ancillary System in order to transfer liquidity from a TIPS AS Technical account to a TIPS Account.

Central Banks shall be able to initiate a Liquidity Transfer even if the closing date of the account is exceeded and regardless of the account's blocking status.

4.4.1.1 Liquidity Transfer - New screen

Context of Usage

This screen contains a number of fields regarding immediate liquidity transfers. The user can enter data to create a new outbound or intra-service liquidity transfer. TIPS shall allow the TIPS Actor, which is the owner of the account to be debited, or the Instructing Party (if granted the necessary privileges to instruct) or the relevant Central Bank to trigger this function. The user can use this screen either in 2-eyes or in 4-eyes mode. This function is available in both U2A and A2A mode. In case the Actor is not entitled to launch the Outbound Liquidity Transfer no access to the screen is possible.

Screen Access

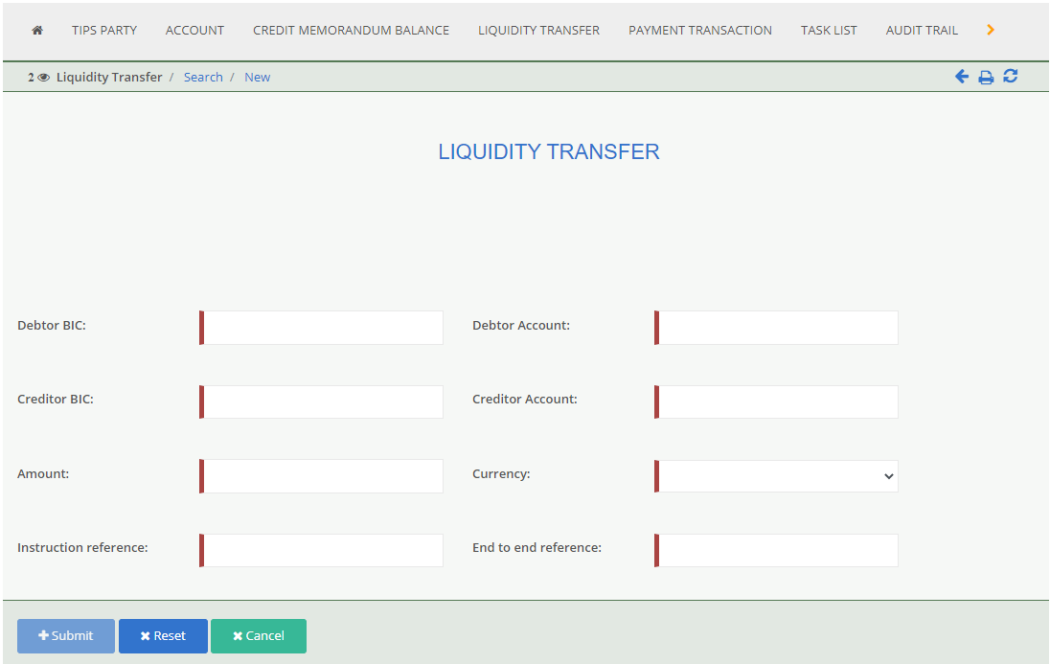

- Liquidity Transfer >> *Search* screen or *Advanced Search* screen >> Click on the *New* button

Privileges

To use this screen, the following Privilege is needed:

- TIP_LiquidityTransfer

Screenshot

Field description

Liquidity Transfer	
Object	**Required Format**

All rights reserved.

Debtor BIC	Field where to enter the BIC of the owner of the account to be debited. In contingency scenario, the Debtor BIC can also refer to the BIC of the RTGS Transit Account Holder in the given currency. Format is BIC11. References for error messages: [▸]: ▌L002
Debtor Account	Field where to enter the account to be debited. In contingency scenario, the Debtor Account can also refer to the RTGS Transit Account in TIPS. Format is max. 34 characters (SWIFT-x). References for error messages: [▸]: ▌L002 ▌L099
Creditor BIC	Field where to enter the BIC11 of the owner of the account to be credited. In contingency scenario, the Creditor BIC can also refer to the BIC of the RTGS Transit Account Holder in the given currency. Format is BIC11. References for error messages: [▸]: ▌L001 ▌L099
Creditor Account	Field where to enter the account to be credited (e.g. an RTGS account for non-euro currency LT, a T2-CLM account for euro LT or a T2S DCA). In contingency scenario, the Creditor Account can also refer to the RTGS Transit Account in TIPS. Format is max. 34 characters (SWIFT-x). References for error messages: [▸]: ▌L001
Amount	Field where to enter the amount to be transferred with the Liquidity Transfer. Format is max. 18 digits including the decimal point and up to 5 decimal places. References for error messages: [▸]: ▌L012

Cancel	This function enables the user to cancel the process

4.5 Task List

This functions is used to confirm or revoke all the reference and dynamic data changes that were initiated in 4-eyes mode, thus adding the check of a second user before completing the action.

4.5.1 Task List functionality

4.5.1.1 Task List – Search/List Screen

Context of Usage This screen contains the Action type, the User reference, the Object identifier, the Timestamp of update and the Status, as search fields. The user can use this screen to find the item waiting for approval and then approve or revoke it. The 4-Eyes functionality is available for the following

All rights reserved.

functions: Block/Unblock of a Party, Block/Unblock of an account, Block/Unblock of a CMB, Limit Update, Broadcast and Liquidity Transfer. This function is only available in U2A mode.

The search results will be displayed in a list, which is sorted by the values of the Timestamp of update in descending order.

Screen Access

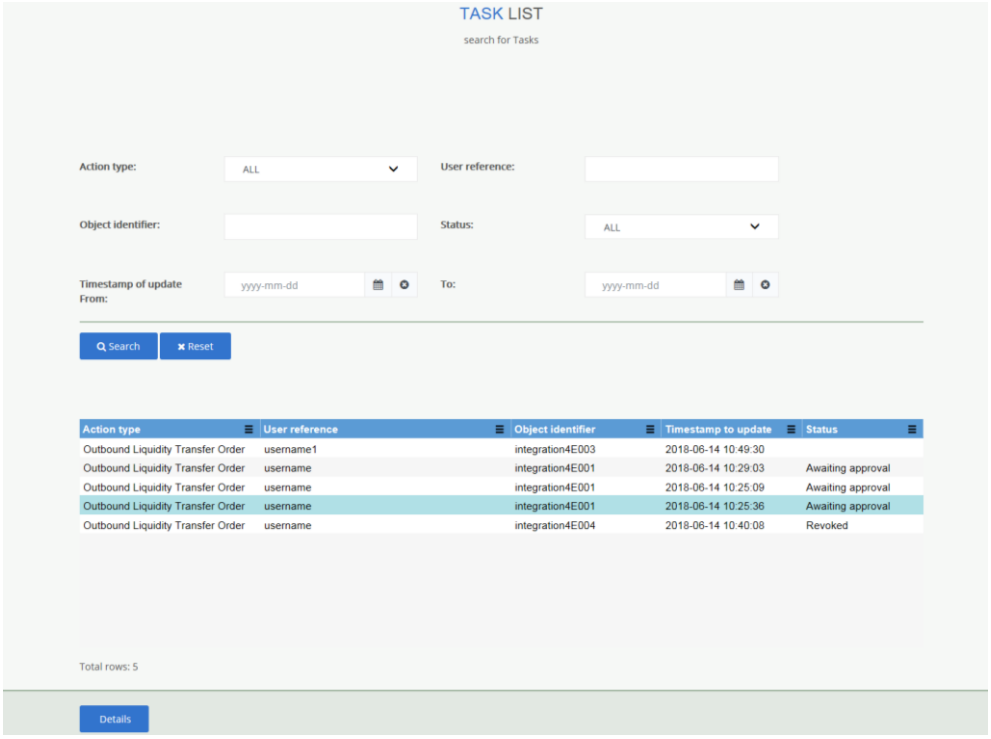

- Task List >> *Search/List* Screen

Privileges

To use this screen, the following Privileges are needed:

- TIP_Query
- TIP_QueryReachable

TIPS Party New Blocking Status	Shows the New Blocking status that is awaiting for approval. It is shown in red in the screen.
Block/Unblock Account	
Account Number	Shows the ID of the account whose Blocking status the user is modifying
Account New Blocking Status	Shows the New Blocking status that is awaiting for approval
Block/Unblock CMB	
CMB Number	Shows the number of the CMB whose Blocking status the user is checking
TIPS CMB New Blocking Status	Shows the New Blocking status that is awaiting for approval
Update Limit	
CMB Number	Shows the number of the CMB, which is unique in TIPS
Linked Account	Shows the ID of the account to which the CMB is linked
Limit Value	Shows the New value of the CMB Limit that is awaiting for approval. In case the value is Unlimited the Unlimited wording will appear instead of a specific amount.
Liquidity Transfer	
Debtor BIC	Shows the BIC11 of the owner of the debited account.
Debtor Account	Shows the debited account.
Creditor BIC	Shows the BIC11 of the owner of the credited account.
Creditor Account	Shows the credited account
Amount	Shows the amount to be transferred with the Liquidity Transfer.
Currency	Shows the currency used for the amount of the Liquidity Transfer.
Broadcast	
Sender BIC	Shows the BIC of the sender party.
Recipients	Shows the recipients of the broadcast from the possible values: ▌All Users ▌Users by currency
Currency	Shows the interested currency. Only applicable when 'Users by currency' is selected in the Recipients field. It is empty in all the other scenarios.
Broadcast Type	Shows the type of broadcast. Possible values are: ▌Immediate Downtime Start

All rights reserved.

	▪ Immediate Downtime End ▪ Planned Downtime ▪ Insolvency ▪ Free Text
Party BIC	Shows the BIC of the Party to which the broadcast refers. Possible format is: BIC8 or BIC11.
Planned Downtime Start	The field is empty when “Free Text” is used as Broadcast Type.
Planned Downtime End	Shows the starting timestamp of the planned downtime expressed in UTC format.
Free Text	Shows the message content of the broadcast.

Buttons

Approve	This function enables the user to approve the action initiated by the first user. Upon clicking on the Approve button the user will be asked to enter the PIN for digital signature purposes (NRO). With the entry of the PIN, TIPS attaches a digital signature to the instruction entered by the TIPS actor. The button is only available when the Status of the Action is Awaiting approval. References for error messages: [▸]: ▪ R011
Revoke	This function enables the user to revoke the action initiated by the first user. Upon clicking on the Revoke button the user will be asked to enter the PIN for digital signature purposes (NRO). With the entry of the PIN, TIPS attaches a digital signature to the instruction entered by the TIPS actor. References for error messages: [▸]: ▪ R011
Cancel	This function enables the user to cancel the process and return to the previous screen

All rights reserved.

4.6 Audit Trail

4.6.1 Audit Trail functionality

4.6.1.1 Audit Trail – Search/list screen

Context of Usage

This screen allows an authorized requestor to search for revisions performed by a specific user on all the reference and transactional objects or on a selected type of reference or transactional object or to search for all the revisions performed by all the users under the data scope of the requestor on the selected reference or transactional objects. This function is available only in U2A mode.

Screen Access

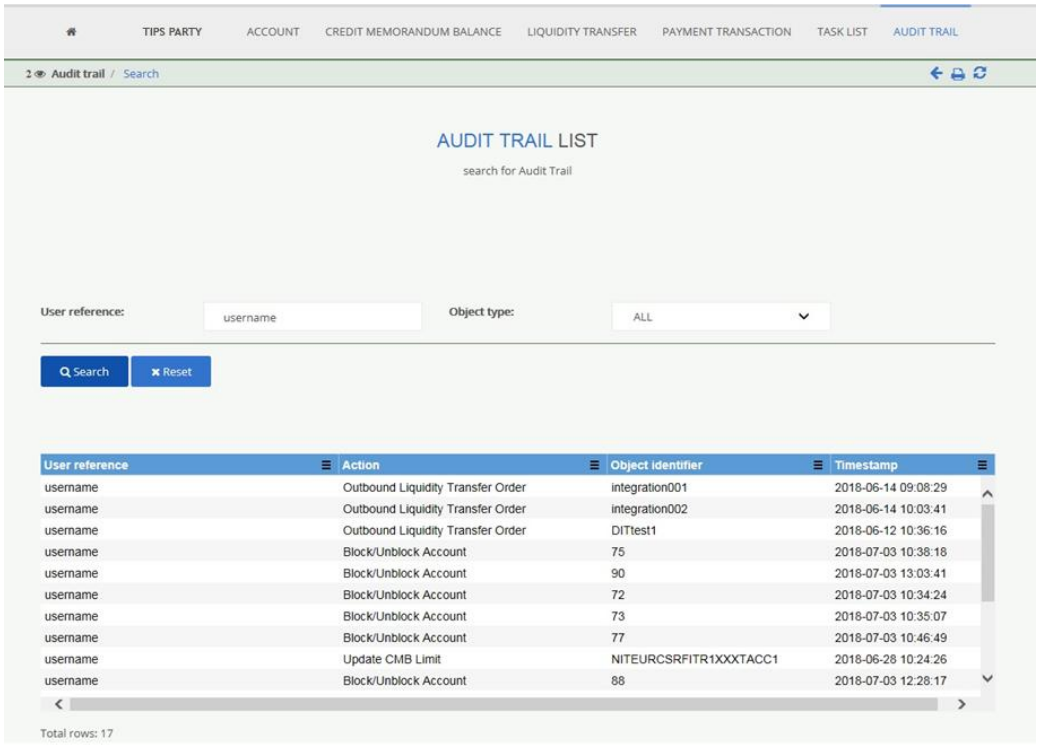

- Audit trail >> Search/List screen>> Click on the search button >>

Privileges

To use this screen, the user needs the following privileges:

- TIP_Query

4.7 Broadcast

4.7.1 Broadcast functionality

4.7.1.1 Broadcast – New screen

Context of Usage

This screen contains a number of fields regarding broadcasts. The user can enter new data. Afterwards the user can proceed further by clicking on the buttons below and send manual broadcasts to all TIPS Actors or to those using the same currency

The screen allows the user to enter a message and to broadcast it to all TIPS Actors or to those using a specific currency.

The user can use this screen either in 2-eyes or in 4-eyes mode. This function is available in both U2A and A2A mode.

Screen Access

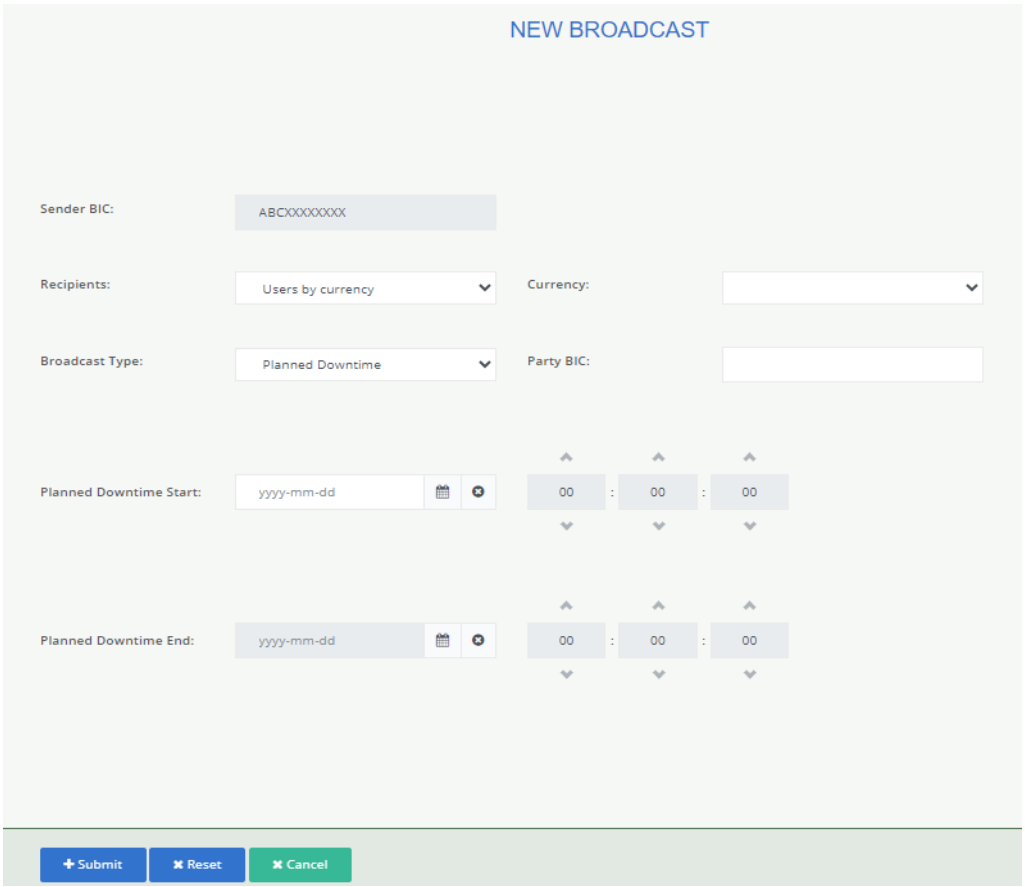

- Broadcast box >> Click on the *Broadcast* button >> *Search/List* Screen >> Click on the *New* button

Privileges

To access this screen, the following Privilege is needed:

- TIP_CreateBroadcast

Screenshot

Field description

Broadcast - New	
Object	**Required Format**

All rights reserved.

Sender BIC	This field is read-only and is automatically filled with the BIC of the party the user belongs to.
Recipients	Select the recipients of the broadcast from the possible values: ▌All Users ▌Users by currency This field is mandatory.
Currency	Select the currency from the list of settlement currencies available in TIPS. The field is enabled only when 'Users by currency' is selected in the Recipients field. It is disabled in all the other scenarios. Default value is EUR.
Broadcast Type	The field enables the user to specify the type of broadcast. Possible values are: ▌Immediate Downtime Start ▌Immediate Downtime End ▌Planned Downtime ▌Insolvency ▌Free Text This field is mandatory.
Party BIC	Enter the BIC of the Party to which the broadcast refers. Possible format is: BIC8 or BIC11. The field is disabled when the user selects "Free Text" as Broadcast Type. It is enabled and mandatory in all other cases.
Planned Downtime Start	Enter the starting timestamp of the planned downtime expressed in UTC format. Required format is: YYYY-MM-DD hh:mm:ss The 'Planned Downtime Start' must be equal or greater than the current timestamp. The field is enabled and mandatory if the user selects "Planned Downtime" in Broadcast Type field. It is disabled otherwise.
Planned Downtime End	Enter the ending timestamp of the planned downtime expressed in UTC format. Required format is: YYYY-MM-DD hh:mm:ss The 'Planned Downtime End' must be equal to or greater than the 'Planned Downtime Start' and equal to or greater than the current timestamp. The field is enabled and mandatory if the user selects "Planned Downtime" in Broadcast Type field. It is disabled otherwise.
Text	Enter the message content of the broadcast. If the user selects "Free Text" as Broadcast Type, the field is mandatory.

Buttons

All rights reserved.

Submit	This function enables the user to create a new broadcast. Upon clicking on the submit button the user will be asked to enter their PIN for digital signature purposes (NRO). With the entry of the PIN, TIPS attaches a digital signature to the instruction entered by the TIPS actor. Once submitted, the broadcast will be sent to the intended recipients through the U2A interfaces. In the latter case, the preview of the broadcast is displayed in the broadcast box on GUI screens of the recipient users. References for error messages: [▸]: ▌B099
Reset	This function enables the user to set all fields to default value and blanks out all optional fields.
Cancel	This function enables the user to cancel the process.

5 Screen user guide

The Screen user guide part comprises business scenarios adapted from typical user workflows. Each business scenario represents a single workflow and consists of single action steps, intermediate results and a final result. In detail, each business scenario description has the same structure and contains the following elements.

Context of Usage	The context of usage describes the aim of the business scenario and indicates whether it is mandatory or optional in order to fulfil the overall business package. It also contains the usage restrictions and the pre-requisites (excluding the privileges), if available.
Privileges	In this section, all the necessary Privileges to access and use the involved screens are listed. First the Privileges to access the first screen are mentioned, followed by the Privileges necessary to proceed with the business scenario. Afterwards, the Privileges for the following screens are mentioned in the same order.
Reference	This section lists all references to the screens involved, in order of their appearance in the business scenario.
Instructions	Each workflow is described from the start to the end, beginning with the access to the starting screen. The instructions involve a number of separate steps which lead the user through a series of screens and actions. Each action step is focused on one single action. Intermediate results are included and the instructions end with a final result. Possible alternatives and repetitions are highlighted with a notice sign.

5.1 Monitoring of Accounts, CMBs, Liquidity Transfers and Payments

5.1.1 Query Account Balance and Status

Context of Usage

This business scenario describes how to view the Account balance details allowing the user to monitor and manage balances through queries.

To perform these queries and use these screens the user must use a party with existing TIPS Accounts or TIPS AS Technical Accounts.

Privileges

To carry out this business scenario, the following Privileges are needed:

- TIP_Query
- TIP_QueryReachable

Reference

Further information on screens involved can be found in the screen reference part:

- 4.1.1 Query Account balance and Status

Instructions

1. Go to the *Account* screen
2. Enter the Account number as search criterion
3. Click on the *Search* button
   - ➔ The *Account balance - display* screen containing the search results is displayed

5.1.2 Query CMB Limit and Status

Context of Usage

This business scenario describes how to view the CMB Limit and Status allowing to monitor and manage a Limit set on a CMB, for instruction investigations, through queries.

All rights reserved.

In order to monitor the Limit, the user shall insert the CMB number, which is always unique in TIPS (neither other CMBs nor Accounts can have the same number).

Privileges

To carry out this business scenario, the following Privileges are needed:

- TIP_Query
- TIP_QueryReachable

Reference

Further information on screens involved can be found in the screen reference part:

- 4.1.2 Query CMB Limit and status

Instructions

1. Go to the *CMB* screen
2. Enter the CMB number as search criterion
3. Click on the *Search* button
   ➔ The *CMB Limit and status display* screen, containing search results is displayed on the screen.

5.1.3 Query Liquidity Transfer Status

Context of Usage

This business scenario describes how to view the status of a Liquidity Transfer order. In order to check the status, the user shall insert the Liquidity transfer reference and the Debtor BIC.

Privileges

To carry out this business scenario, the following Privileges are needed:

- TIP_Query
- TIP_QueryReachable

Reference

Further information on screens involved can be found in the screen reference part:

- 4.1.3 Query Liquidity Transfer status

Instructions

1. Go to the Liquidity Transfer screen
2. Enter the Liquidity Transfer reference and the debtor BIC as Search criteria
3. Click on the Search button
   ➔ The *Liquidity Transfer status display* screen, containing the search result, is displayed on the screen.

5.1.4 Query Payment Transaction Status

Context of Usage

This business scenario describes how to view the status of a Payment transaction.

Privileges

To carry out this business scenario, the following Privileges are needed:

- TIP_Query
- TIP_QueryReachable

Reference

Further information on screens involved can be found in the screen reference part:

All rights reserved.

- 4.1.4 Query Payment Transaction status

Instructions

1. Go to the Payment transaction screen
2. Enter the Payment transaction reference and the originator BIC as Search criteria
3. Click on the Search button
   ➔ The *Payment Transaction status display* screen, containing the search result, is displayed on the screen.

5.2 Management of Local Reference Data

5.2.1 Blocking/Unblocking of Participants and Ancillary Systems

Context of Usage

This business scenario describes how to modify the blocking status of a TIPS Actor allowing the user to unblock, block for crediting, block for debiting or block for debiting/crediting said TIPS Actor. When a Party Blocking status is modified, payments involving the Party are affected immediately. This scenario is needed when the settlement should be prevented for all the accounts owned by a specific TIPS Actor, or when the settlement needs to be allowed again after a previous blocking of the Party. Settlement is also prevented on all CMBs linked to the accounts of this Party.

Privileges

To carry out this business scenario, the following Privileges are needed:

- TIP_Query
- TIP_QueryReachable
- TIP_ModifyAllBlocking

Reference

Further information on screens involved can be found in the screen reference part:

- 4.2.1 Participant Blocking

Instructions

1. Go to the *TIPS Party – search* screen
2. Enter the Party BIC as search criterion
3. Click on the *Search* button. The current Blocking status is shown
4. Click on the *Change Status* button
5. Select the desired Blocking Status from the drop-down menu
6. Click on the *Submit* button
   ➔ The Party is displayed with the new Blocking status

5.2.2 Blocking/Unblocking of Accounts

Context of Usage

This business scenario describes how to modify the blocking status of an account allowing the requestor to Unblock, block for crediting, block for debiting or block for debiting/crediting said Account. When an Account Blocking status is modified, payments involving the Account are affected immediately. This scenario is needed when the settlement on a specific Account should be prevented, or when the settlement needs to be allowed again after a previous blocking of the account.

All rights reserved.

Privileges

To carry out this business scenario, the following Privileges are needed:

- TIP_Query
- TIP_QueryReachable
- TIP_ModifyAllBlocking

Reference

Further information on screens involved can be found in the screen reference part:

- 4.2.2 Account Blocking

Instructions

1. Go to the Account – search screen
2. Enter the Account number as search criterion
3. Click on the *Search* button. The current Blocking status is shown
4. Click on the *Change Status* button
5. Select the desired Blocking Status from the drop-down menu
6. Click on the *Submit* button

➔ The account is displayed with the new Blocking status

5.2.3 Blocking/Unblocking of CMBs

Context of Usage

This business scenario describes how to modify the blocking status of a CMB allowing the requestor to unblock, block for crediting, block for debiting or block for debiting/crediting the selected CMB. When an Account Blocking status is modified, payments involving the CMB are affected immediately. This scenario is needed when the settlement on a specific CMB should be prevented, or when the settlement needs to be allowed again after a previous blocking of the CMB.

Privileges

To carry out this business scenario, the following Privileges are needed:

- TIP_Query
- TIP_QueryReachable
- TIP_ModifyCMBBlocking

Reference

Further information on screens involved can be found in the screen reference part:

- 4.2.3 CMB Blocking

Instructions

1. Go to the *CMB - search* screen
2. Enter the CMB number as search criterion
3. Click on the *Search* button. The current Blocking status is shown
4. Click on the *Change Status* button
5. Select the desired Blocking Status from the drop-down menu
6. Click on the *Submit* button

➔ The CMB is displayed with the new Blocking status

5.2.4 CMB Limit Modification

Context of Usage

This business scenario describes how to maintain the CMB Limit allowing the user to create, modify or delete (i.e. set to unlimited) a Limit value. When a CMB limit is modified, the headroom of the CMB is updated accordingly. The CMB headroom is updated (increased or decreased) on the basis of the difference between the old limit value of the CMB and the new limit value.

All rights reserved.

Creating a Limit is not mandatory in TIPS; a CMB can be used with an Unlimited value.

Privileges

To carry out this business scenario, the following Privileges are needed:

- TIP_Query
- TIP_QueryReachable
- TIP_AdjustCMBLimit

Reference

Further information on screens involved can be found in the screen reference part:

- 4.3.1.2 CMB Limit Modification – Modify limit screen

Instructions

1. Go to the *CMB – search/display* screen
2. Enter the CMB number as search criterion
3. Click on the *Search* button. The current Limit is shown
4. Click on the *Modify Limit* button
5. Type the desired amount on the Limit field
6. Click on the *Submit* button
   ➔ The CMB limit is displayed with the new amount

5.3 Liquidity Transfer

5.3.1 Inject Outbound Liquidity Transfer

Context of Usage

This business scenario describes how to inject an Outbound Liquidity transfer from a TIPS Account to an RTGS Account opened in an RTGS System connected to TIPS. When a Liquidity transfer is instructed, the balance of the Debited TIPS Account is updated accordingly. This functionality is needed every time a Participant needs to move liquidity back to the relevant RTGS system.

Privileges

To carry out this business scenario, the following Privilege is needed:

- TIP_LiquidityTransfer

Reference

Further information on screens involved can be found in the screen reference part:

- 4.4.1.1 Liquidity Transfer - New screen

Instructions

1. Go to the *Liquidity Transfer - new* screen
2. Enter the Liquidity transfer information (Debtor BIC, Debtor Account number, Creditor BIC, Creditor Account number, Amount, Currency)
3. Click on the *Submit* button
   ➔ The Liquidity Transfer is sent and the TIPS Account is debited

5.3.2 Inject Intra-service Liquidity Transfer to fund a TIPS AS Technical Account

Context of Usage

This business scenario describes how to inject a Liquidity transfer from a TIPS Account to TIPS AS Technical Account. When a Liquidity transfer is instructed, the balance of both accounts are updated accordingly. This functionality is needed every time a Participant needs to fund the TIPS AS Technical Account to allow the Ancillary System to settle Instant Payments.

Privileges

To carry out this business scenario, the following Privilege is needed:

All rights reserved.

- TIP_LiquidityTransfer

Reference

Further information on screens involved can be found in the screen reference part:

- 4.4.1.1 Liquidity Transfer - New screen

Instructions

1. Go to the *Liquidity Transfer - new* screen
2. Enter the Liquidity transfer information (Debtor BIC, Debtor Account number, Creditor BIC, Creditor Account number, Amount, Currency)
3. Click on the *Submit* button
   - ➔ The intra-service Liquidity Transfer and, as a result, the TIPS Account is debited and the TIPS AS Technical Account is credited

5.3.3 Inject Intra-service Liquidity Transfer between two TIPS Accounts

Context of Usage

This business scenario describes how to inject a Liquidity Transfer from a TIPS Account to another TIPS Account belonging to the same account holder. When a Liquidity transfer is instructed, the balance of both accounts is updated accordingly. This functionality is needed every time a Participant needs to move liquidity between TIPS Accounts belonging to the same account holder.

Privileges

To carry out this business scenario, the following Privilege is needed:

- TIP_LiquidityTransfer

Reference

Further information on screens involved can be found in the screen reference part:

- 4.4.1.1 Liquidity Transfer - New screen

Instructions

1. Go to the *Liquidity Transfer - new* screen
2. Enter the Liquidity Transfer information (Debtor BIC, Debtor Account number, Creditor BIC, Creditor Account number, Amount, Currency)
3. Click on the *Submit* button
   - ➔ The intra-service Liquidity Transfer and, as a result, the TIPS Account entered as Debtor Account is debited and the TIPS Account entered as Creditor Account is credited

5.4 Task List

5.4.1 Task List confirmation/Revoking

Context of Usage

This business scenario describes how to approve or revoke an action, which has been initiated by a different user in 4-eyes mode. The use of 2-eyes or 4-eyes mode depends on the requestor's access rights configuration. Approving an action is mandatory for the usage of the 4-eyes mode. Before the user can confirm/revoke, the action has to be initiated by a different user.

Privileges

To carry out this business scenario, the following Privileges are needed[24]:

- TIP_Query
- TIP_QueryReachable

[24] The user always needs the TIP_Query privilege or TIP_QueryReachable and one of the following privileges depending on the task to be approved/revoked

All rights reserved.

- TIP_ModifyAllBlocking[25]
- TIP_ModifyCMBBlocking[26]
- TIP_AdjustCMBLimit[27]
- TIP_LiquidityTransfer[28]

Reference Further information on screens involved can be found in the screen reference part:
- 4.5.1 Task List

Instructions

1. Go to the *Task List – search/list* screen
2. Enter the search criteria (Action type and 4-Eyes identification) about the action waiting for the user approval.
3. Click on the *Search* button. The search result will appear on the lower part of the screen
4. Choose one action to approve/revoke and then click on the *Details* button. The result is displayed in the *Task List – Details* screen
5. Check the data. If everything is correct, click on the *Approve* button, otherwise click on the *Revoke* button.

5.5 Broadcast

5.5.1 Enter Broadcast

Context of Usage This business scenario describes how to enter a message and broadcast it to all TIPS Actors. This functionality is needed every time a TIPS Actor needs to inform other participants about the suspension or unavailability of a party.

Privileges To carry out this business scenario, the following Privilege is needed:
- TIP_CreateBroadcast

Reference Further information on screens involved can be found in the screen reference part:
- 4.7.1.3 Broadcast - New screen

Instructions

1. Go to the *Broadcast - new* screen
2. Enter the broadcast data (Recipients, Currency, Broadcast Type, Party BIC, Text, Planned Downtime Start/End Timestamp – if needed)
3. Click on the *Submit* button
   ➔ The Broadcast is sent

5.5.2 Query Broadcast

Context of Usage This business scenario describes how to search and get detailed information regarding broadcasts that are currently available in TIPS.

Privileges To carry out this business scenario, the following Privilege is needed:

[25] In case the action to approve or revoke is the modification of the TIPS Party Blocking status or the Account Blocking status

[26] In case the action to approve or revoke is the modification of the TIPS CMB Blocking status

[27] In case the action to approve or revoke is the modification of the CMB Limit

[28] In case the action to approve or revoke is the sending of a LTO

All rights reserved.

- TIP_ViewBroadcast

Reference

Further information on screens involved can be found in the screen reference part:

- 4.7.1.1 Broadcast – Search/List screen
- 4.7.1.2 Broadcast – Details screen

Instructions

1. Go to the Broadcast – Search/List screen
2. Enter the Recipients, Currency, Broadcast Type or Party BIC as Search criteria
3. Click on the Search button
   ➔ The list, containing the search result, is displayed on the same screen.
4. Select the broadcast of interest.
5. Click on the *Details* button
   ➔ The *Broadcast – Details* screen, containing the message content, is displayed on the screen.

All rights reserved.

6 Annex

6.1 Reference for error messages for GUI Screens

This section includes a list of references for error messages for all GUI screens. Each error code table entry includes the error text and the description.

6.1.1 Error Codes

Reference for error message	Field or Button	Error text
L001	Creditor BIC field Creditor Account field	Unknown Creditor or Creditor Account
L002	Debtor BIC field Debtor Account field	Unknown Debtor or Debtor Account
L005	Submit button	The Debtor or the Debtor Account is blocked
L006	Submit button	Outbound or Inbound LT is a duplicate submission
L007	Submit button	Failure of the settlement attempt of the instruction due to insufficient cash balance
L008	Submit button	RTGS system is closed
L009	Submit button	Invalid content of the field RTGS Status
L011	Submit button	Order not found
L012	Amount field Submit button	The amount is lower or equal to zero
L013	Submit button	LT via a transit account is allowed in contingency scenario only
L014	Debtor BIC field Debtor Account field Creditor BIC field Creditor Account field	Intra-service LT not allowed
L015	Submit button RTGS Status	User not authorised when RTGS System is partially closed
L099	Submit button	Creditor/Debtor owner Outbound-DN is missing
R002	TIPS Party BIC field	Party not existing
R006	Account Number field CMB Number field	Account/CMB not existing
R007	Currency field	Currency not correct
R008	Change Status button	User not allowed to block/unblock the account/CMB

All rights reserved.

R009	I Change Status button I Search button	User not allowed to block/unblock the TIPS Party
R010	I Search button	User not allowed to query the TIPS Party/account/CMB/Task List
R011	I Approve button I Revoke button	User not allowed to approve/revoke the task
DS14	I User Reference field	User does not exist
R020	I CMB Number field	CMB not existing
R021	I Modify Limit button	User not allowed to change the Limit
TBL1	I Submit button	The owner of the debtor account or the debtor account/CMB is blocked
B099	I Create button	Generic broadcast creation error

6.2 Error Code Mapping

This section includes the mapping between external and internal error codes.

6.2.1 Error Codes

Flow Description	External ISO Code	Internal Code	Validation Name	User-Friendly Description
Contingency Inbound LT	DNOR	1150	Debtor Auth	Unauthorized request - The sender is not authorized to submit instructions on behalf of the debtor. Check the instructing party permissions in CRDM.
Contingency Inbound LT	DS14	1500	Debtor requestor existence	Unknown sender - The Distinguished Name (DN) of the message sender is not registered in CRDM. Verify that the sender's certificate is correctly configured.
Contingency Inbound LT	L001	1200	Creditor Account	Unknown creditor account - The specified creditor account ID does not exist in CRDM. Verify the account number is correct.
Contingency Inbound LT	L001	1230	Creditor Account opening date	Creditor account not active - The creditor account is outside its valid operating period (opening/closing

All rights reserved.

				dates) for the current business date.
Contingency Inbound LT	L003	-1005	Currency	Invalid ISO currency - The specified currency code is not a valid ISO 4217 currency code.
Contingency Inbound LT	L003	1700	LT currency	Currency mismatch - The liquidity transfer currency does not match the account currency, or the RTGS system is not configured for this currency.
Contingency Inbound LT	L004	-1302	Creditor account owner	Creditor participant blocked - The creditor's participant (account owner) is blocked for credit operations in CRDM.
Contingency Inbound LT	L004	-1102	Creditor account status	Creditor account blocked - The creditor's TIPS account is blocked for credit operations. The liquidity transfer cannot be completed.
Contingency Inbound LT	L006	-1	Duplicate check	Duplicate instruction - A liquidity transfer with the same Instruction ID and Debtor BIC already exists within the data retention period.
Contingency Inbound LT	L012	-105	Invalid amount	Invalid amount - The liquidity transfer amount must be strictly positive (greater than zero).
Contingency Inbound LT	L012	1750	LT amount	Invalid amount - The liquidity transfer amount must be greater than zero.
Contingency Inbound LT	L013	-3004	RTGS contingency status	Contingency mode required - Liquidity transfers via transit accounts are only permitted when the RTGS system is in contingency mode.
Contingency Inbound LT	L099	-3005	Debitor account ID	Transit account ID mismatch - The technical ID of the transit account does not match the stored value. This indicates a potential system or data inconsistency.
Contingency Inbound LT	L099	-3002	Transit account overflow	Transit account overflow - This transfer would cause the transit

All rights reserved.

				account balance to exceed its maximum allowed value.
Contingency Inbound LT	L099	-1103	Currency	Currency conflict - The account has been used for a different currency than specified. Data inconsistency detected.
Contingency Inbound LT	L099	-1006	Business Date	Unknown business date - The business date for the relevant RTGS system is not configured in TIPS.
Contingency Inbound LT	L099	-1002	Creditor account	Account type conflict - The creditor account shows a data inconsistency between CRDM and Settlement Engine (registered as CMB vs account).
Contingency Inbound LT	L099	1180	Debtor account type	Invalid debtor account type field - The DbtrAcct.Tp tag should not be specified for this type of liquidity transfer.
Contingency Inbound LT	L099	1280	Creditor account type	Invalid creditor account type field - The CdtrAcct.Tp tag should not be specified for this type of liquidity transfer.
Contingency Inbound LT	L099	1550	Requestor provider	U2A channel required - Contingency inbound liquidity transfers must be submitted via the U2A (User-to-Application) channel, not A2A.
Contingency Inbound LT	L099	1590	Outbound DN	Missing creditor outbound DN - The creditor account owner does not have a valid Distinguished Name configured for credit notifications.
Contingency Outbound LT	DNOR	1150	Debtor Auth	Unauthorized request - The sender is not authorized to submit instructions on behalf of the debtor. Check the instructing party permissions in CRDM.
Contingency Outbound LT	DS14	1500	Debtor requestor existence	Unknown sender - The Distinguished Name (DN) of the message sender is not registered

All rights reserved.

				in CRDM. Verify that the sender's certificate is correctly configured.
Contingency Outbound LT	L002	1100	Debtor Account	Unknown debtor account - The specified debtor account ID does not exist in CRDM. Verify the account number is correct.
Contingency Outbound LT	L002	1130	Debtor Account opening date	Debtor account not active - The debtor account is outside its valid operating period (opening/closing dates) for the current business date.
Contingency Outbound LT	L003	-1005	Currency	Invalid ISO currency - The specified currency code is not a valid ISO 4217 currency code.
Contingency Outbound LT	L003	1700	LT currency	Currency mismatch - The liquidity transfer currency does not match the account currency, or the RTGS system is not configured for this currency.
Contingency Outbound LT	L005	-1301	Debtor account owner	Debtor participant blocked - The debtor's participant (account owner) is blocked for debit operations in CRDM.
Contingency Outbound LT	L005	-1101	Debtor account status	Debtor account blocked - The debtor's TIPS account is blocked for debit operations. The liquidity transfer cannot be initiated.
Contingency Outbound LT	L006	-1	Duplicate check	Duplicate instruction - A liquidity transfer with the same Instruction ID and Debtor BIC already exists within the data retention period.
Contingency Outbound LT	L007	-2001	Debtor account balance	Insufficient funds - The debtor account does not have sufficient balance to execute this liquidity transfer.
Contingency Outbound LT	L012	-105	Invalid amount	Invalid amount - The liquidity transfer amount must be strictly positive (greater than zero).
Contingency Outbound LT	L012	1750	LT Amount	Invalid amount - The liquidity transfer amount must be greater than zero.

All rights reserved.

Contingency Outbound LT	L013	-3004	RTGS contingency status	Contingency mode required - Liquidity transfers via transit accounts are only permitted when the RTGS system is in contingency mode.
Contingency Outbound LT	L099	-3005	Creditor account ID	Transit account ID mismatch - The technical ID of the transit account does not match the stored value. This indicates a potential system or data inconsistency.
Contingency Outbound LT	L099	-1103	Currency	Currency conflict - The account has been used for a different currency than specified. Data inconsistency detected.
Contingency Outbound LT	L099	-1006	Business Date	Unknown business date - The business date for the relevant RTGS system is not configured in TIPS.
Contingency Outbound LT	L099	-1001	Debtor account	Account type conflict - The debtor account shows a data inconsistency between CRDM and Settlement Engine (registered as CMB vs account).
Contingency Outbound LT	L099	1180	Debtor account type	Invalid debtor account type field - The DbtrAcct.Tp tag should not be specified for this type of liquidity transfer.
Contingency Outbound LT	L099	1280	Creditor account type	Invalid creditor account type field - The CdtrAcct.Tp tag should not be specified for this type of liquidity transfer.
Contingency Outbound LT	L099	1590	Outbound DN	Missing creditor outbound DN - The creditor account owner does not have a valid Distinguished Name configured for credit notifications.
Cross-Currency Payment Confirmation	AB05	1950	Timeout	Beneficiary timeout - The beneficiary's confirmation (pacs.002) was received after the allowed timeout period. The response exceeded the

All rights reserved.

				transaction timeout plus beneficiary offset.
Cross-Currency Payment Confirmation	AG09	-2	Existence of original message	Original transaction not found - The Settlement Engine could not locate the original transaction. It may have been purged after the data retention period.
Cross-Currency Payment Confirmation	AG09	1300	Existence of original message	Original transaction not found - The referenced original transaction does not exist in TIPS. Verify the Original Transaction ID and Debtor BIC are correct.
Cross-Currency Payment Confirmation	AG09	1310	Scope of original message	Transaction type mismatch - The retrieved transaction is not of the expected type (e.g., querying a cross-currency payment as a standard payment or vice versa).
Cross-Currency Payment Confirmation	AG09	1350	Original message status	Original transaction not pending - The original transaction is no longer in a pending/reserved state and cannot be modified. It may have already been settled, rejected, or timed out.
Cross-Currency Payment Confirmation	CNOR	1250	Creditor requestor authorization	Unauthorized request - The sender is not authorized to submit instructions on behalf of the creditor. Check the instructing party permissions in CRDM.
Cross-Currency Payment Confirmation	DS14	1520	Creditor requestor existence	Unknown sender - The Distinguished Name (DN) of the message sender is not registered in CRDM. Verify that the sender's certificate is correctly configured.
Cross-Currency Payment Confirmation	MS01	1400	Missing response status	Missing status - The response message must specify either a group status or a transaction status, but neither was provided.
Cross-Currency Payment Confirmation	MS01	1450	Duplicate response status	Duplicate status - The response message specifies both group

All rights reserved.

				status and transaction status. Only one should be provided.
Cross-Currency Payment Confirmation	MS01	1460	Invalid negative status	Invalid rejection details - For a rejection (RJCT) response, the status reason information (StsRsnInf with Rsn) must be specified.
Cross-Currency Payment Confirmation	MS01	1870	Invalid original reference	Invalid original message reference - The OrgnlMsgNmId does not reference a valid pacs.008 message type as expected.
Cross-Currency Payment Confirmation	MS01	9100	Existence of original message	Database error - A database error occurred while retrieving the original transaction. This is a technical issue; please retry or contact support.
Cross-Currency Payment Confirmation	MS01	9130	Missing Debtor Agent	Missing debtor agent BIC - The BIC of the debtor agent is required but was not provided in the message.
Cross-Currency Payment Request	AB06	1900	Timeout	Request too old - The payment request timestamp is older than allowed (exceeds transaction timeout plus originator offset). The payment was initiated too long ago.
Cross-Currency Payment Request	AB06	1910	Acceptable future time window	Future timestamp rejected - The payment request timestamp is too far in the future. Check that the originator's system clock is synchronized.
Cross-Currency Payment Request	AB08	1990	Sweeper timeout	Transaction expired - The transaction was automatically expired by the TIPS timeout service (Sweeper) because no response was received within the allowed period.
Cross-Currency Payment Request	AM05	-1	Duplicate check	Duplicate transaction - A transaction with the same Transaction ID and Debtor BIC already exists within the data

All rights reserved.

				retention period. Use a unique Transaction ID.
Cross-Currency Payment Request	AM23	-2002	Debtor CMB limit	CMB limit exceeded - The transaction amount exceeds the available headroom on the debtor's Credit Memorandum Balance (CMB) limit.
Cross-Currency Payment Request	AM23	-2001	Debtor account balance	Insufficient funds - The debtor account does not have sufficient balance to cover the transaction amount.
Cross-Currency Payment Request	AM23	-1005	Currency	Invalid ISO currency code - The specified currency is not a valid ISO 4217 currency code.
Cross-Currency Payment Request	AM23	1700	Currency	Invalid currency - The transaction currency does not match the account currency or the RTGS system is not configured for this currency in CRDM.
Cross-Currency Payment Request	AM23	1750	Amount	Amount exceeds limit - The transaction amount exceeds the maximum allowed value configured for this currency in CRDM.
Cross-Currency Payment Request	CNOR	1200	Creditor account/cmb existence	Creditor account not found - No TIPS account or CMB exists for the specified creditor BIC and currency combination. Verify the creditor BIC is correctly registered in CRDM.
Cross-Currency Payment Request	CNOR	1220	Creditor account link existence	Creditor account link missing - No BIC-to-account link exists in CRDM for the specified creditor BIC and currency. The creditor participant may not be configured for this currency.
Cross-Currency Payment Request	CNOR	1230	Creditor account/cmb opening date	Creditor account not active - The creditor account exists but is outside its valid operating period (opening/closing dates) for the current business date.

All rights reserved.

Cross-Currency Payment Request	DNOR	1100	Debtor account/cmb existence	Debtor account not found - No TIPS account or CMB exists for the specified debtor BIC and currency combination. Verify the debtor BIC is correctly registered in CRDM.
Cross-Currency Payment Request	DNOR	1120	Debtor account link existence	Debtor account link missing - No BIC-to-account link exists in CRDM for the specified debtor BIC and currency. The debtor participant may not be configured for this currency.
Cross-Currency Payment Request	DNOR	1130	Debtor account/cmb opening date	Debtor account not active - The debtor account exists but is outside its valid operating period (opening/closing dates) for the current business date.
Cross-Currency Payment Request	DNOR	1150	Debtor requestor authorization	Unauthorized request - The sender is not authorized to submit instructions on behalf of the debtor. Check the instructing party permissions in CRDM.
Cross-Currency Payment Request	DS14	1500	Debtor requestor existence	Unknown sender - The Distinguished Name (DN) of the message sender is not registered in CRDM. Verify that the sender's certificate is correctly configured.
Cross-Currency Payment Request	MS01	-1103	Currency	Currency conflict - The account has previously been used for a different currency than specified. This indicates a data inconsistency in CRDM.
Cross-Currency Payment Request	MS01	-1006	Business Date	Unknown business date - The business date for the relevant RTGS system is not known to TIPS. This may indicate a system calendar configuration issue.
Cross-Currency Payment Request	MS01	-1004	Creditor cmb	CMB configuration error - The creditor CMB is either registered as a regular account or has no limit assigned. Verify CMB configuration in CRDM.

All rights reserved.

Cross-Currency Payment Request	MS01	-1003	Debtor cmb	CMB configuration error - The debtor CMB is either registered as a regular account or has no limit assigned. Verify CMB configuration in CRDM.
Cross-Currency Payment Request	MS01	-1002	Creditor account	Account type conflict - The creditor account is registered as a CMB in the Settlement Engine but as an account in CRDM. This indicates a data inconsistency.
Cross-Currency Payment Request	MS01	-1001	Debtor account	Account type conflict - The debtor account is registered as a CMB in the Settlement Engine but as an account in CRDM. This indicates a data inconsistency.
Cross-Currency Payment Request	MS01	1550	Outbound DN	Missing outbound DN - The BIC is not linked to a valid Distinguished Name in CRDM. The message cannot be routed to the intended recipient.
Cross-Currency Payment Request	MS01	1850	Remittance information	Invalid remittance information - The message contains both structured (Strd) and unstructured (Ustrd) remittance information. Only one type is allowed.
Cross-Currency Payment Request	MS01	9000	Technical error	Technical error - An unexpected error occurred that is not mapped to a specific error code. Contact TIPS support for assistance.
Cross-Currency Payment Request	MS01	9120	Invalid Originator	Invalid originator - TIPS could not identify the originator of this payment. For outgoing flows, this is the debtor agent; for incoming flows, it's the instructing agent.
Cross-Currency Payment Request	MS01	9130	Missing Debtor Agent	Missing debtor agent BIC - The BIC of the debtor agent is required but was not provided in the message.
Cross-Currency Payment Request	MS01	9135	Missing Instructing agent	Missing instructing agent - The instructing agent field is required for outgoing payment flows but was not provided.

All rights reserved.

Cross-Currency Payment Request	MS01	9230	Missing Creditor Agent	Missing creditor agent - The creditor agent field is required for incoming payment flows but was not provided.
Cross-Currency Payment Request	MS01	9235	Missing Instructed agent	Missing instructed agent - The instructed agent field is required for incoming payment flows but was not provided.
Cross-Currency Payment Request	MS01	9400	Invalid Service level	Invalid service level - Only 'SEPA' or 'EOLO' are valid service levels for this payment type.
Cross-Currency Payment Request	MS01	9410	Invalid Local Instrument	Invalid local instrument - Only 'INST' is a valid local instrument code for instant payments.
Cross-Currency Payment Request	TBL1	-1301	Debtor account owner	Debtor participant blocked - The debtor's participant (account owner) is blocked for debit operations in CRDM.
Cross-Currency Payment Request	TBL1	-1201	Debtor CMB status	Debtor CMB blocked - The debtor's Credit Memorandum Balance (CMB) is currently blocked for debit operations.
Cross-Currency Payment Request	TBL1	-1101	Debtor account status	Debtor account blocked - The debtor's TIPS account is currently blocked for debit operations. Contact the account administrator to resolve the blocking status.
Cross-Currency Payment Request	TBL2	-1302	Creditor account owner	Creditor participant blocked - The creditor's participant (account owner) is blocked for credit operations in CRDM.
Cross-Currency Payment Request	TBL2	-1202	Creditor CMB status	Creditor CMB blocked - The creditor's Credit Memorandum Balance (CMB) is currently blocked for credit operations.
Cross-Currency Payment Request	TBL2	-1102	Creditor account status	Creditor account blocked - The creditor's TIPS account is currently blocked for credit operations. Contact the account administrator to resolve the blocking status.

All rights reserved.

Inbound Liquidity Transfer	L001	1200	Creditor Account	Unknown creditor account - The specified creditor account ID does not exist in CRDM. Verify the account number is correct.
Inbound Liquidity Transfer	L001	1230	Creditor Account opening date	Creditor account not active - The creditor account is outside its valid operating period (opening/closing dates) for the current business date.
Inbound Liquidity Transfer	L003	-1005	Currency	Invalid ISO currency - The specified currency code is not a valid ISO 4217 currency code.
Inbound Liquidity Transfer	L003	1700	LT currency	Currency mismatch - The liquidity transfer currency does not match the account currency, or the RTGS system is not configured for this currency.
Inbound Liquidity Transfer	L004	-1302	Creditor account owner	Creditor participant blocked - The creditor's participant (account owner) is blocked for credit operations in CRDM.
Inbound Liquidity Transfer	L004	-1102	Creditor account status	Creditor account blocked - The creditor's TIPS account is blocked for credit operations. The liquidity transfer cannot be completed.
Inbound Liquidity Transfer	L006	-1	Duplicate check	Duplicate instruction - A liquidity transfer with the same Instruction ID and Debtor BIC already exists within the data retention period.
Inbound Liquidity Transfer	L010	1580	RTGS requestor existence	Unknown RTGS system - The sender DN does not correspond to a recognized RTGS system for the specified currency.
Inbound Liquidity Transfer	L012	-105	Invalid amount	Invalid amount - The liquidity transfer amount must be strictly positive (greater than zero).
Inbound Liquidity Transfer	L012	1750	LT amount	Invalid amount - The liquidity transfer amount must be greater than zero.
Inbound Liquidity Transfer	L099	-3002	Transit account overflow	Transit account overflow - This transfer would cause the transit

All rights reserved.

				account balance to exceed its maximum allowed value.
Inbound Liquidity Transfer	L099	-1103	Currency	Currency conflict - The account has been used for a different currency than specified. Data inconsistency detected.
Inbound Liquidity Transfer	L099	-1006	Business Date	Unknown business date - The business date for the relevant RTGS system is not configured in TIPS.
Inbound Liquidity Transfer	L099	-1002	Creditor account	Account type conflict - The creditor account shows a data inconsistency between CRDM and Settlement Engine (registered as CMB vs account).
Inbound Liquidity Transfer	L099	1450	Direction of the LT order	Cannot determine LT direction - Unable to identify whether this is an inbound or outbound liquidity transfer based on account type tags.
Inbound Liquidity Transfer	L099	1590	Outbound DN	Missing creditor outbound DN - The creditor account owner does not have a valid Distinguished Name configured for credit notifications.
Instant Payment Confirmation	AB05	-4001	Timeout	Beneficiary timeout - The beneficiary's confirmation (pacs.002) was received after the allowed timeout period. This timeout was detected by the Settlement Engine.
Instant Payment Confirmation	AB05	1950	Timeout	Beneficiary timeout - The beneficiary's confirmation (pacs.002) was received after the allowed timeout period. The response exceeded the transaction timeout plus beneficiary offset.
Instant Payment Confirmation	AG09	-2	Existence of original message	Original transaction not found - The Settlement Engine could not locate the original transaction. It may

All rights reserved.

				have been purged after the data retention period.
Instant Payment Confirmation	AG09	1300	Existence of original message	Original transaction not found - The referenced original transaction does not exist in TIPS. Verify the Original Transaction ID and Debtor BIC are correct.
Instant Payment Confirmation	AG09	1350	Original message status	Original transaction not pending - The original transaction is no longer in a pending/reserved state and cannot be modified. It may have already been settled, rejected, or timed out.
Instant Payment Confirmation	CNOR	1250	Creditor requestor authorization	Unauthorized request - The sender is not authorized to submit instructions on behalf of the creditor. Check the instructing party permissions in CRDM.
Instant Payment Confirmation	DS14	1520	Creditor requestor existence	Unknown sender - The Distinguished Name (DN) of the message sender is not registered in CRDM. Verify that the sender's certificate is correctly configured.
Instant Payment Confirmation	MS01	1400	Missing response status	Missing status - The response message must specify either a group status or a transaction status, but neither was provided.
Instant Payment Confirmation	MS01	1450	Duplicate response status	Duplicate status - The response message specifies both group status and transaction status. Only one should be provided.
Instant Payment Confirmation	MS01	1460	Invalid negative status	Invalid rejection details - For a rejection (RJCT) response, the status reason information (StsRsnInf with Rsn) must be specified.
Instant Payment Confirmation	MS01	1870	Invalid original reference	Invalid original message reference - The OrgnlMsgNmId does not reference a valid pacs.008 message type as expected.

All rights reserved.

Instant Payment Confirmation	MS01	9100	Existence of original message	Database error - A database error occurred while retrieving the original transaction. This is a technical issue; please retry or contact support.
Instant Payment Request	AB06	-4000	Timeout	Originator timeout - The payment request (pacs.008) could not be processed within the allowed timeout period. This timeout was detected by the Settlement Engine.
Instant Payment Request	AB06	1900	Timeout	Request too old - The payment request timestamp is older than allowed (exceeds transaction timeout plus originator offset). The payment was initiated too long ago.
Instant Payment Request	AB06	1910	Acceptable future time window	Future timestamp rejected - The payment request timestamp is too far in the future. Check that the originator's system clock is synchronized.
Instant Payment Request	AB08	1990	Sweeper timeout	Transaction expired - The transaction was automatically expired by the TIPS timeout service (Sweeper) because no response was received within the allowed period.
Instant Payment Request	AM05	-1	Duplicate check	Duplicate transaction - A transaction with the same Transaction ID and Debtor BIC already exists within the data retention period. Use a unique Transaction ID.
Instant Payment Request	AM23	-2002	Debtor CMB limit	CMB limit exceeded - The transaction amount exceeds the available headroom on the debtor's Credit Memorandum Balance (CMB) limit.
Instant Payment Request	AM23	-2001	Debtor account balance	Insufficient funds - The debtor account does not have sufficient balance to cover the transaction amount.

All rights reserved.

Instant Payment Request	AM23	-1005	Currency	Invalid ISO currency code - The specified currency is not a valid ISO 4217 currency code.
Instant Payment Request	AM23	1700	Currency	Invalid currency - The transaction currency does not match the account currency or the RTGS system is not configured for this currency in CRDM.
Instant Payment Request	AM23	1750	Amount	Amount exceeds limit - The transaction amount exceeds the maximum allowed value configured for this currency in CRDM.
Instant Payment Request	CNOR	1200	Creditor account/cmb existence	Creditor account not found - No TIPS account or CMB exists for the specified creditor BIC and currency combination. Verify the creditor BIC is correctly registered in CRDM.
Instant Payment Request	CNOR	1220	Creditor account link existence	Creditor account link missing - No BIC-to-account link exists in CRDM for the specified creditor BIC and currency. The creditor participant may not be configured for this currency.
Instant Payment Request	CNOR	1230	Creditor account/cmb opening date	Creditor account not active - The creditor account exists but is outside its valid operating period (opening/closing dates) for the current business date.
Instant Payment Request	DNOR	1100	Debtor account/cmb existence	Debtor account not found - No TIPS account or CMB exists for the specified debtor BIC and currency combination. Verify the debtor BIC is correctly registered in CRDM.
Instant Payment Request	DNOR	1120	Debtor account link existence	Debtor account link missing - No BIC-to-account link exists in CRDM for the specified debtor BIC and currency. The debtor participant may not be configured for this currency.

All rights reserved.

Instant Payment Request	DNOR	1130	Debtor account/cmb opening date	Debtor account not active - The debtor account exists but is outside its valid operating period (opening/closing dates) for the current business date.
Instant Payment Request	DNOR	1150	Debtor requestor authorization	Unauthorized request - The sender is not authorized to submit instructions on behalf of the debtor. Check the instructing party permissions in CRDM.
Instant Payment Request	DS14	1500	Debtor requestor existence	Unknown sender - The Distinguished Name (DN) of the message sender is not registered in CRDM. Verify that the sender's certificate is correctly configured.
Instant Payment Request	MS01	-1103	Currency	Currency conflict - The account has previously been used for a different currency than specified. This indicates a data inconsistency in CRDM.
Instant Payment Request	MS01	-1006	Business Date	Unknown business date - The business date for the relevant RTGS system is not known to TIPS. This may indicate a system calendar configuration issue.
Instant Payment Request	MS01	-1004	Creditor cmb	CMB configuration error - The creditor CMB is either registered as a regular account or has no limit assigned. Verify CMB configuration in CRDM.
Instant Payment Request	MS01	-1003	Debtor cmb	CMB configuration error - The debtor CMB is either registered as a regular account or has no limit assigned. Verify CMB configuration in CRDM.
Instant Payment Request	MS01	-1002	Creditor account	Account type conflict - The creditor account is registered as a CMB in the Settlement Engine but as an account in CRDM. This indicates a data inconsistency.

All rights reserved.

Instant Payment Request	MS01	-1001	Debtor account	Account type conflict - The debtor account is registered as a CMB in the Settlement Engine but as an account in CRDM. This indicates a data inconsistency.
Instant Payment Request	MS01	1550	Outbound DN	Missing outbound DN - The BIC is not linked to a valid Distinguished Name in CRDM. The message cannot be routed to the intended recipient.
Instant Payment Request	MS01	1850	Remittance information	Invalid remittance information - The message contains both structured (Strd) and unstructured (Ustrd) remittance information. Only one type is allowed.
Instant Payment Request	MS01	9000	Technical error	Technical error - An unexpected error occurred that is not mapped to a specific error code. Contact TIPS support for assistance.
Instant Payment Request	MS01	9160	Debtor organisation identification	Invalid debtor organisation ID - For SCT Inst, the debtor organisation must be identified by AnyBIC, LEI, or Other identification.
Instant Payment Request	MS01	9165	Ultimate debtor organisation identification	Invalid ultimate debtor organisation ID - For SCT Inst, the ultimate debtor organisation must be identified by AnyBIC, LEI, or Other identification.
Instant Payment Request	MS01	9170	Debtor private identification	Invalid debtor private ID - For SCT Inst, the debtor (private person) must be identified by date/place of birth or Other identification.
Instant Payment Request	MS01	9175	Ultimate debtor private identification	Invalid ultimate debtor private ID - For SCT Inst, the ultimate debtor (private person) must be identified by date/place of birth or Other identification.
Instant Payment Request	MS01	9260	Creditor organisation identification	Invalid creditor organisation ID - For SCT Inst, the creditor organisation must be identified by AnyBIC, LEI, or Other identification.

All rights reserved.

Instant Payment Request	MS01	9265	Ultimate creditor organisation identification	Invalid ultimate creditor organisation ID - For SCT Inst, the ultimate creditor organisation must be identified by AnyBIC, LEI, or Other identification.
Instant Payment Request	MS01	9270	Creditor private identification	Invalid creditor private ID - For SCT Inst, the creditor (private person) must be identified by date/place of birth or Other identification.
Instant Payment Request	MS01	9275	Ultimate creditor private identification	Invalid ultimate creditor private ID - For SCT Inst, the ultimate creditor (private person) must be identified by date/place of birth or Other identification.
Instant Payment Request	TBL1	-1301	Debtor account owner	Debtor participant blocked - The debtor's participant (account owner) is blocked for debit operations in CRDM.
Instant Payment Request	TBL1	-1201	Debtor CMB status	Debtor CMB blocked - The debtor's Credit Memorandum Balance (CMB) is currently blocked for debit operations.
Instant Payment Request	TBL1	-1101	Debtor account status	Debtor account blocked - The debtor's TIPS account is currently blocked for debit operations. Contact the account administrator to resolve the blocking status.
Instant Payment Request	TBL2	-1302	Creditor account owner	Creditor participant blocked - The creditor's participant (account owner) is blocked for credit operations in CRDM.
Instant Payment Request	TBL2	-1202	Creditor CMB status	Creditor CMB blocked - The creditor's Credit Memorandum Balance (CMB) is currently blocked for credit operations.
Instant Payment Request	TBL2	-1102	Creditor account status	Creditor account blocked - The creditor's TIPS account is currently blocked for credit operations. Contact the account administrator to resolve the blocking status.

Intra-service Liquidity Transfer	DNOR	1150	Debtor Auth	Unauthorized request - The sender is not authorized to submit instructions on behalf of the debtor. Check the instructing party permissions in CRDM.
Intra-service Liquidity Transfer	DS14	1500	Debtor requestor existence	Unknown sender - The Distinguished Name (DN) of the message sender is not registered in CRDM. Verify that the sender's certificate is correctly configured.
Intra-service Liquidity Transfer	L003	-1005	Currency	Invalid ISO currency - The specified currency code is not a valid ISO 4217 currency code.
Intra-service Liquidity Transfer	L003	1700	LT currency	Currency mismatch - The liquidity transfer currency does not match the account currency, or the RTGS system is not configured for this currency.
Intra-service Liquidity Transfer	L004	-1302	Creditor account owner	Creditor participant blocked - The creditor's participant (account owner) is blocked for credit operations in CRDM.
Intra-service Liquidity Transfer	L004	-1102	Creditor account status	Creditor account blocked - The creditor's TIPS account is blocked for credit operations. The liquidity transfer cannot be completed.
Intra-service Liquidity Transfer	L005	-1301	Debtor account owner	Debtor participant blocked - The debtor's participant (account owner) is blocked for debit operations in CRDM.
Intra-service Liquidity Transfer	L005	-1101	Debtor account status	Debtor account blocked - The debtor's TIPS account is blocked for debit operations. The liquidity transfer cannot be initiated.
Intra-service Liquidity Transfer	L006	-1	Duplicate check	Duplicate instruction - A liquidity transfer with the same Instruction ID and Debtor BIC already exists within the data retention period.
Intra-service Liquidity Transfer	L007	-2001	Debtor account balance	Insufficient funds - The debtor account does not have sufficient balance to execute this liquidity transfer.

All rights reserved.

Intra-service Liquidity Transfer	L012	-105	Invalid amount	Invalid amount - The liquidity transfer amount must be strictly positive (greater than zero).
Intra-service Liquidity Transfer	L012	1750	LT Amount	Invalid amount - The liquidity transfer amount must be greater than zero.
Intra-service Liquidity Transfer	L014	1105	Debtor Account	Intra-service LT not allowed - The debtor account type is not valid for intra-service transfers. Must be a TIPS Cash Account or AS Technical Account.
Intra-service Liquidity Transfer	L014	1135	Debtor Account opening date	Intra-service LT not allowed - The debtor account is not active for the current business date.
Intra-service Liquidity Transfer	L014	1205	Creditor Account	Intra-service LT not allowed - The creditor account type is not valid for intra-service transfers. Must be a TIPS Cash Account or AS Technical Account.
Intra-service Liquidity Transfer	L014	1235	Creditor Account opening date	Intra-service LT not allowed - The creditor account is not active for the current business date.
Intra-service Liquidity Transfer	L014	1400	Account types	Intra-service LT not allowed - Debtor and creditor accounts must be of different types (one Cash Account and one AS Technical Account).
Intra-service Liquidity Transfer	L099	-1103	Currency	Currency conflict - The account has been used for a different currency than specified. Data inconsistency detected.
Intra-service Liquidity Transfer	L099	-1006	Business Date	Unknown business date - The business date for the relevant RTGS system is not configured in TIPS.
Intra-service Liquidity Transfer	L099	-1001	Debtor account	Account type conflict - The debtor account shows a data inconsistency between CRDM and Settlement Engine (registered as CMB vs account).
Intra-service Liquidity Transfer	L099	1180	Debtor account type	Invalid debtor account type field - The DbtrAcct.Tp tag should not be

All rights reserved.

				specified for this type of liquidity transfer.
Intra-service Liquidity Transfer	L099	1280	Creditor account type	Invalid creditor account type field - The CdtrAcct.Tp tag should not be specified for this type of liquidity transfer.
Intra-service Liquidity Transfer	L099	1570	Outbound DN	Missing debtor outbound DN - The debtor account owner does not have a valid Distinguished Name configured for debit notifications.
Intra-service Liquidity Transfer	L099	1590	Outbound DN	Missing creditor outbound DN - The creditor account owner does not have a valid Distinguished Name configured for credit notifications.
Intra-service Liquidity Transfer	L099	9000	Technical error	Technical error - An unexpected error occurred that is not mapped to a specific error code. Contact TIPS support for assistance.
Negative Recall Answer	CNOR	1220	Assigner account link existence	Creditor account link missing - No BIC-to-account link exists in CRDM for the specified creditor BIC and currency. The creditor participant may not be configured for this currency.
Negative Recall Answer	CNOR	1250	Assigner requestor authorization	Unauthorized request - The sender is not authorized to submit instructions on behalf of the creditor. Check the instructing party permissions in CRDM.
Negative Recall Answer	DS14	1500	Requestor existence	Unknown sender - The Distinguished Name (DN) of the message sender is not registered in CRDM. Verify that the sender's certificate is correctly configured.
Negative Recall Answer	MS01	1225	Assignee account link existence	Assignee account link missing - No BIC-to-account link exists for the assignee (recall recipient) in CRDM. Cannot route the recall request.
