1 Introduction

1.1 Purpose of the Information Guide for TARGET participants

The Information Guide for TARGET participants (hereinafter referred to as the Infoguide) aims to provide TARGET participants (credit institutions, ancillary systems, other entities settling in TARGET¹) with a comprehensive set of information regarding the functioning and operational procedures of TARGET settlement services during both normal and abnormal situations.

The Infoguide consists of four parts:

1. Fundamentals
2. CLM & RTGS
3. **TIPS** and
4. T2S Cash

The Fundamentals part describes the aspects that apply similarly across TARGET settlement services, the CLM & RTGS part describes the specific procedures applicable to the operation of central liquidity management (CLM) and RTGS services, the **TIPS** part describes the specific procedures applicable to the TARGET Instant Payment Settlement (TIPS) service, and the T2S Cash part describes the specific procedures applicable to the T2S dedicated cash accounts (T2S DCAs).

While TARGET was developed to offer multi-currency services, this Infoguide describes all relevant procedures for the euro currency. For other currencies, the central bank making its currency available in TARGET² is responsible for the relevant operational procedures and they are not covered in this Infoguide.

The scope of this Infoguide **PART 3 – TIPS** (hereinafter referred to as the TIPS Infoguide) excludes functional/technical descriptions of TIPS as well as the internal processes of Level 3 NCBs³ (hereafter referred to as the 4CB).

Note: the TIPS Infoguide complements the Fundamentals Infoguide and is not to be used as a stand-alone document.

All references throughout this document to “TIPS participants” refer to participants as well as other entities authorised to access their account (i.e. parties with a technical

¹ Further information can be found in Chapter 2.4.

² By signing a Currency Participation Agreement (CPA).

³ Level 3 NCBs means the Deutsche Bundesbank, Banque de France, Banca d'Italia and Banco de España (4CB) in their capacity as the CBs developing and operating TARGET for the Eurosystem's benefit.

connection to TIPS). All references throughout this document to “TIPS users” refer to an individual or an application that can log into a service.

The TIPS Infoguide is not a legally binding document, and its content confers no legal rights on TARGET users, operations or any person or entity. All times in this document refer to the local time at the seat of the European Central Bank, i.e. Central European Time (CET).

1.2 Structure of the TIPS Infoguide

The TIPS Infoguide starts with an introductory part (**Chapter 1**) to explain to the reader the purpose and structure of the Infoguide.

Chapter 2 contains TIPS-specific information on participation in TIPS and communication flows.

Chapters 3 and 4 describe the TIPS-related operational procedures to be respectively applied under normal and abnormal situations.

Chapter 5 deals with how service continuity is assured by the use of different tools and business continuity measures.

Chapter 6 enlists and describes the testing activities for TIPS.

Chapter 7 covers the receipt and payment of TIPS invoices for participants.

Chapter 8 describes the change, release and deployment management procedures for TIPS for the annual releases and for other emergency changes and what are known as “hotfixes”.

1.3 TIPS Infoguide change management

The TIPS Infoguide is reviewed and updated in line with the Infoguide Fundamentals (see Chapter 1.4 “TARGET Infoguide change management”).

2 General information

2.1 Required reachability in TIPS – euro

In accordance with the decision taken by the Governing Council of the ECB on pan-European reachability for instant payments via TARGET Instant Payment Settlement (TIPS)⁴:

1. payment service providers (PSPs) adhering to the SEPA instant credit transfer (SCT Inst) scheme and reachable in TARGET should become reachable in TIPS either as a participant or as a reachable party, and
2. automated clearing houses (ACHs) offering instant payment services should hold their technical accounts in TIPS.

Note that parties that are already active in TIPS (i.e. TIPS participants and reachable parties) are also considered as parties active in the Mobile Proxy Lookup (MPL); in addition, it is technically possible for parties to be defined as MPL actors only, should they wish not to be active in TIPS.⁵

2.2 Types of participation – TIPS

Participant means an entity that holds at least one MCA and may additionally hold one or more DCAs in TARGET or ancillary systems (AS).

For the purpose of completeness, in this chapter reference is made to the participants (holding one or more accounts in TIPS) as well as other actors technically interacting directly (e.g. instructing parties and reachable parties if they interact directly with TIPS instead of relying on an instructing party) with TIPS.

TIPS DCA holder (participant)

The access criteria for holding a euro TIPS dedicated cash account (DCA), or any other TARGET cash account, are set out in the [Guideline \(EU\) of the European Central Bank on a new-generation Trans-European Automated Real-time Gross settlement Express Transfer system \(TARGET\) and repealing Guideline ECB/2012/27](#) (hereafter referred to as “TARGET Guideline”) (Annex I, Part I, Article 4). The access criteria for non-euro currencies are defined under the relevant non-euro legal framework.

TIPS DCAs are opened by the responsible central bank and are used to settle instant payment orders, positive recall answers, and liquidity transfer orders (to/from

⁴ Governing Council decision of 22 July 2020.

⁵ As per the MIB decision, the usage of MPL is initially restricted to TIPS actors only (please refer to Resolution [MIB-19-02-017]).

MCAs, to/from RTGS DCAs, to/from T2S DCAs, to overnight deposit accounts, and to/from TIPS ASTAs).

Instant payments include (i) instant payments in a single currency, (ii) cross-currency instant payments between currencies settling in TIPS and (iii) cross-currency instant payments where one leg of the transaction settles in TIPS and the remainder settles outside TIPS.

Note: if a TIPS DCA holder exercises its option to accept cross-currency instant payments, it shall inform its central bank accordingly.

TIPS DCA holders can set and manage:

1. credit memorandum balances (CMBs) linked to their own accounts and related limits;
2. reachable parties defined as authorised account users of their accounts or CMBs;
3. instructing party configuration for entities acting on behalf of themselves.

They can also act as instructing parties for other TIPS DCA holders and reachable parties.

TIPS AS technical account holder (participant)

As defined in the TARGET Guideline, ancillary systems (AS) are systems operated by entities established in the European Union or the EEA that are subject to supervision and/or oversight by a competent authority and comply with the oversight requirements for the location of infrastructures offering services in euro, as amended from time to time and published on the ECB's website, in which payments and/or financial instruments are exchanged and/or cleared or recorded with (a) the monetary obligations resulting in transfer orders which are settled in TARGET and/or (b) funds held in TARGET in accordance with the TARGET Guideline.

The access criteria for holding a euro TIPS AS technical account (TIPS ASTA) are set out in the TARGET Guideline (Annex I, Part I, Article 4). The access criteria for non-euro currencies are defined under the relevant non-euro legal framework.

TIPS ASTAs are opened and operated by the responsible central bank on the request of an AS that settles instant payments in accordance with the SCT Inst scheme or near instant payments settled in the books of the AS. TIPS ASTAs are used to settle instant payment orders, positive recall answers and liquidity transfer orders to and from TIPS DCAs.

Instant payments include (i) instant payments in a single currency, (ii) cross-currency instant payments between currencies settling in TIPS and (iii) cross-currency instant payments where one leg of the transactions settles in TIPS and the remainder settles outside TIPS.

Note: if a TIPS ASTA holder exercises its option to accept or send cross-currency instant payments, it shall inform its central bank accordingly.

TIPS ASTA holders can set and manage:

1. credit memorandum balances (CMBs) linked to their own accounts and related limits;
2. reachable parties defined as authorised account users of their accounts or CMBs;
3. instructing party configuration for entities acting on behalf of themselves.

Reachable party

Reachable parties do not hold TIPS DCAs and they rely on a TIPS DCA holder's account to settle instant payment orders and positive recall answers in TIPS. They can also act as instructing parties.

Instructing party

Instructing parties interact directly with TIPS. They are entities designated by TIPS DCA holders, TIPS AS technical account holders or reachable parties to send/receive instant payment orders, or liquidity transfer orders to/from TIPS on their behalf.

Instructing parties are not defined as parties, but as Distinguished Names (DNs) that participants and reachable parties can define and authorise to act on their behalf via a specific DN-BIC configuration. Instructing parties may be granted access rights for a subset or the whole set of functionalities that are available to the participant or reachable party. Participants and reachable parties may act as instructing parties as well.

Central bank

Central banks are responsible for maintaining the reference data of their respective banking community and may act on behalf of their participants in contingency (i.e. for liquidity transfers, queries and reference data changes).

2.3 TIPS Directory

For the purpose of supporting the routing of payments in TIPS, the routing information is provided in a structured TIPS Directory. The TIPS Directory includes the list of all BICs of TIPS Participants and Reachable Parties that are addressable within TIPS. The TIPS directory also includes information for each BIC as to whether the TIPS DCA holder or reachable party accepts cross-currency payments.

A separate TIPS Directory is available for each currency settling in TIPS.

Generation of TIPS Directory

CRDM generates both a full version and a delta version of the TIPS Directory every business day at 17:00. The full version includes all BICs of TIPS Participants and Reachable Parties that are addressable within TIPS, whereas the delta version only includes changes with respect to the previous version of the TIPS Directory, i.e., records that were added, deleted or modified⁶. In case there are no changes between two versions of the TIPS Directory, the delta version consists of an empty file. Immediately after the generation is completed, CRDM forwards both the full version and the delta version to TIPS for push distribution (see CRDM UDFS). TIPS Actors who created a Report Configuration either full and delta version will receive a TIPS directory including only the records related to the currency of the Central Bank to which the TIPS Participant and Reachable Parties belongs to.

Distribution of the TIPS Directory

TIPS participants may receive the TIPS Directory in two ways:

- **push mode:** each day, after having received the end-of-day message from TARGET, TIPS sends the full version or the delta version of the TIPS Directory to all TIPS Actors who created for this an appropriate Report Configuration.
- **pull mode:** at any time during the service hours of CRDM, a TIPS Actor may download either the full version or the delta version of the TIPS Directory from CRDM.

Note: information about the structure of TIPS Directory as well as further details in the CRDM UDFS, Chapter “TIPS Directory”.

2.4 Setting up Mobile Proxy Lookup actors

The set-up of Mobile Proxy Lookup (MPL) actors takes place in CRDM.

The MPL operator is responsible for setting up and maintaining party reference data for all central banks in the MPL. Central banks are responsible for setting up and maintaining party reference data for the parties of their national community, whereas the MPL participant is responsible setting up and configuring its own users.

MPL participants represent entities that set up and maintain Proxy-IBAN Mapping Table elements within the MPL service. They are uniquely identified by a BIC11 and are able to submit:

- Look-up requests towards MPL in order to obtain the IBAN corresponding to a given proxy digest;
- reachability check requests to check whether a given proxy digest has been mapped to an IBAN.

⁶ See the type of change usage in the CRDM UDFS, under TIPS Directory

2.5 Communication flows

Note that, in general, the contact point for TIPS participants is the National Service Desk (NSD). The communication flows used for TIPS are the same as for all TARGET settlement services.

Both the communication flows as well as the communication tools used for TIPS are described in detail in Fundamentals Infoguide (Chapter 2.3).

TIPS reachable parties

For reachable parties, questions related to the functionality of TIPS should be addressed to the TIPS DCA holder with whom they have a relationship and the TIPS DCA holder may then contact the responsible NSD if necessary.

Instructing parties

As instructing parties do not have a formal business relationship with a specific central bank regarding TIPS, a TIPS DCA holder that intends to allow its instructing party to receive information from their central bank on the TIPS DCA(s) must provide the central bank with authorisation to provide the necessary information. The following case-by-case set-up is applied to ensure that instructing parties receive the necessary business support:

1. Functional questions:

For **instructing parties**, questions related to the functionality of TIPS may be directed to an NSD, either to the NSD of the country where the instructing party is located or to the NSD that has a business relationship with a TIPS DCA holder using the instructing party.

Alternatively, such questions may be raised by a TIPS DCA holder using the instructing party. In this case, the TIPS DCA holder will submit the questions to the NSD of the central bank with which it has a contractual relationship. The NSD may either resolve the question on its own or, if it is unable to do so, involve the TIPS Service Desk.

For **reachable parties**, questions related to the functionality of TIPS should be addressed to the TIPS DCA holder with whom they have a relationship and the TIPS DCA holder may then contact the responsible NSD if necessary.

2. Enquiries related to individual TIPS DCAs or TIPS DCA holders:

Where an instructing party needs to obtain information about an individual TIPS DCA holder that is using the instructing party (e.g. where the instructing party has a question concerning a specific transaction), in order to indemnify a central bank from any legal obligation, the TIPS DCA holder must have given its consent in writing (by submitting a consent form) confirming that its home central bank may provide the instructing party with the required information about the TIPS DCA holder itself and/or its reachable parties.

If an instructing party makes an enquiry, it is implied that the TIPS DCA holder has obtained consent also from its reachable parties (if any) that such information may be provided to the instructing party.

3. Technical connectivity issues:

For **connectivity problems only**, a TIPS DCA holder may contact the TIPS Service Desk directly, which is available for connectivity-related issues 24/7/365, including TARGET closing days.

If the instructing party approaches the TIPS Service Desk in relation to issues other than connectivity, its request will be rejected.

3 Operational procedures during normal operations

3.1 TIPS daily operations

3.1.1 Business day

TIPS processes instructions continuously during the day, on a 24/7/365 basis without any scheduled service downtime.

TIPS starts a new business day shortly after the end of the CLM RTS phase (i.e. shortly after 18:00 in normal situations) and continues to settle instant payments and process recalls without interruption throughout its business day.

The switch to the new business day in TIPS is triggered by a series of events in its interaction with CLM, as described in [Chapter 3.1.4 “End-of-day procedures”](#).

Throughout its business day, during specific windows or timings, TIPS also processes other types of instructions, such as liquidity transfers, local reference data updates and query/reporting requests.

More specifically, **instructions processed in TIPS 24/7/365** are:

1. Instant payments⁷
2. Intra-service liquidity transfers (between TIPS DCAs and TIPS ASTAs)
3. Recall requests and recall answers
4. Queries and reports
5. Local reference data updates **with immediate effect**. Note that these include only:
 - (a) Blocking/unblocking of a TIPS DCA/TIPS ASTA holder
 - (b) Blocking/unblocking of an account or a CMB
 - (c) Updates to CMB limits

The following **actions** also take place **during the day**:

- (a) **17:00** – daily propagation of reference data from the CRDM is initiated.

⁷ Instant payments include (i) instant payments in a single currency, (ii) cross-currency instant payments between currencies settling in TIPS and (iii) cross-currency instant payments where one leg of the transactions settles in TIPS and the remainder settles outside TIPS.

Every CRDM opening day⁸, a time-driven event triggers the propagation of all TIPS and MPL reference data from CRDM to TIPS and MPL, respectively. The event takes place at 17:00 to ensure a smooth and complete reference data propagation before the change of business day. The set of reference data that TIPS and MPL receive on each business day includes all the active data on that business date.

In the event of a contingency on the TIPS side, an ad-hoc propagation (contingency propagation) from CRDM to TIPS may be triggered.

Note: The daily propagation is performed as scheduled and includes all the active data on the relevant business date, **irrespective of the currency.**

- (b) **17:45 (EUR) / 16:45 (DKK)** – Blocking of liquidity transfers between TIPS and T2S (the time is indicative and follows the T2S cut-off, i.e. a delay in T2S results in a delay in blocking liquidity transfers between TIPS and T2S).
- (c) **18:00 (EUR) / 17:00 (DKK)** – Blocking of liquidity transfers between TIPS and CLM or RTGS (the time is indicative and follows the CLM RTS cut-off [same as the RTGS cut-off for interbank payments], i.e. a delay in CLM and RTGS results in a delay in blocking liquidity transfers between TIPS and CLM or RTGS).
- (d) **Shortly after 17:00** (in normal situations), TIPS creates and sends the TIPS **DKK balance snapshot file to CLM.**
- (e) **Shortly after 18:00** (in normal situations) following the change of business day in TIPS, TIPS creates and sends to CLM a general ledger (GL) file per currency with the end-of day-balances on the TIPS DCAs for the business day that just ended.
- (f) **19:30** – Unblocking of liquidity transfers between TIPS and CLM or RTGS (the time is indicative and follows the change of business day in CLM, i.e. a delay in changing the business day in CLM results in a delay in unblocking liquidity transfers between TIPS and CLM or RTGS).
- (g) **20:00** – Unblocking of liquidity transfers between TIPS and T2S (the time is indicative and follows the change of business day in T2S, i.e. a delay in changing the business day in T2S results in a delay in unblocking liquidity transfers between TIPS and T2S).
- (h) **03:00-05:00** – If the optional maintenance window (MW) is activated, liquidity transfers to/from TIPS will be blocked during that window (the times follow the CLM, RTGS and T2S optional MW timings agreed upon). Intra-service liquidity transfers within TIPS are not affected. In normal situations, the respective unblocking takes place at 05:00.

⁸ CRDM follows the CLM calendar and scheduling.

For euro: In the event of a contingency on the MPL side, the MPL operator may trigger an ad-hoc propagation from CRDM to MPL. The contingency propagation is an additional daily propagation triggered intraday if an immediate change of a set of data (not manageable directly in MPL) must be performed. In this case, the steps are as follows:

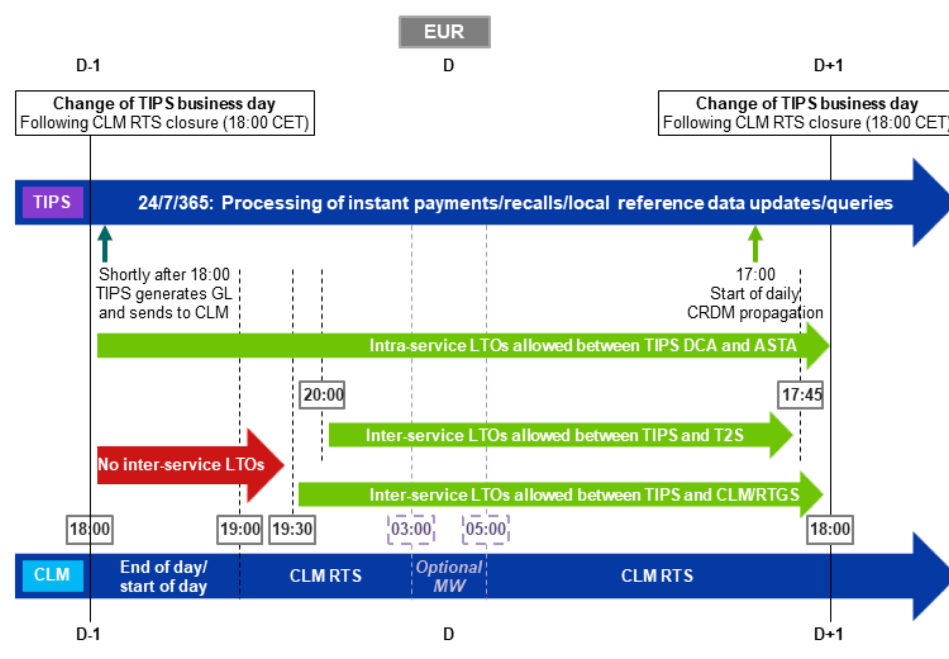

- All the data eligible for the daily propagation and valid at the time of the contingency propagation are propagated;
- The daily propagation is performed as scheduled and includes all active data on the relevant business date.

A. TIPS operational day schedule – EUR

The following figure below shows the different periods of the TIPS business day as applicable to the euro.

Figure 1

TIPS operational day schedule with optional MW – EUR

Notes for Figure 1 and 2 – TIPS operational day schedule

TIPS

- Change of business day: as instant payments are continuously processed, TIPS changes its business day to the next CLM business day following CLM RTS closure.

MW

- **Optional: during weekdays**, the maintenance window (MW) is optional and if activated it takes place from 03:00-05:00. Its activation:
 - **impacts** the settlement of liquidity transfers between TIPS and CLM/RTGS/T2S;
 - **does not impact** TIPS processing of instant payments/intra-service liquidity transfers/recalls/local reference data changes/queries and ESMIG availability for TIPS.
- **Non-optional:** The non-optional MW takes place weekly from 02:30 Saturday until 02:30 Monday. For TARGET closing days, the non-optional MW is extended to include those days, starting at 02:30 on the closing day (e.g. Easter Friday) and ending at 02:30 on the next TARGET working day (e.g. the following Tuesday after Easter). The non-optional MW has no impact on TIPS processing of instant payments/recalls/local reference data changes/queries/intra-service liquidity transfers. During this time, settlement of LTOs between TIPS and CLM, RTGS or T2S will be unavailable.

Liquidity transfer orders

The window for liquidity transfer orders (LTOs) between TIPS and CLM or RTGS differs from the window for LTOs between TIPS and T2S.

Table 1

	18:45	

3.1.2 Liquidity transfers

TIPS provides inter-service liquidity transfer orders and intra-service liquidity transfers.

Inter-service liquidity transfer orders may be inbound or outbound. **Inbound liquidity transfer orders** transfer liquidity from another TARGET settlement service (CLM, RTGS⁹, T2S) to TIPS, while outbound liquidity transfer orders transfer liquidity from TIPS to any other TARGET settlement service (CLM, RTGS, T2S). Intra-service

⁹ In the case of non-euro currencies settling in TIPS but not CLM and RTGS, inbound refers to inbound from the external RTGS that TIPS connects to.

liquidity transfers are used to move liquidity within TIPS between TIPS DCAs and TIPS ASTAs.

Inter-service liquidity transfer orders - euro

Inbound liquidity transfer orders can be triggered by any authorised user in another TARGET settlement service and are received by TIPS.

Outbound liquidity transfer orders may be executed:

- In *push mode* (i.e. instructed in TIPS), to transfer liquidity from a TIPS DCA to an account in CLM, RTGS or T2S.
- In *pull mode* (i.e. instructed in CLM by the TIPS DCA holder)¹⁰, to transfer liquidity from a TIPS DCA to an MCA of that TIPS DCA holder. Note: this is only available in user-to-application (U2A) mode.

If an outbound liquidity transfer is initiated in TIPS but no timely¹¹ response is received from the other relevant TARGET settlement service (CLM, RTGS or T2S), an appropriate operational procedure is initiated.

Liquidity transfers do not entail a reservation of funds, unlike instant payment transactions, and are settled immediately.

Inter-service liquidity transfer windows

Inter-service liquidity transfers to/from TIPS are not available:

- from 18:00 until 19:30 for CLM/RTGS on all TARGET business days
- from 17:45 until 20:00 for T2S on all TARGET business days, and
- during the maintenance window/TARGET closing days

In the case of any abnormal events causing changes to the operational day of CLM and RTGS, the liquidity provisioning windows will be impacted accordingly for all settlement services.

Inter-service liquidity transfers sent during the maintenance window will be rejected.

Intra-service liquidity transfer orders

Intra-service liquidity transfers are available 24/7/365. They can be triggered in application-to-application (A2A) mode and in user-to-application (U2A) mode (via a dedicated TIPS GUI screen) and are executed immediately. Note that intra-service liquidity transfers between two TIPS DCAs or between two TIPS AS technical accounts are not possible.

¹⁰ In the case of non-euro currencies settling in TIPS but not CLM and RTGS, this is subject to the functionality offered by the external RTGS that TIPS connects to.

¹¹ Currently set to 15 minutes.

Intra-service liquidity transfers:

1. liquidity may be transferred from a TIPS DCA to a TIPS ASTA by a central bank, a TIPS participant, ancillary system or instructing party acting on behalf of the TIPS participant.
2. liquidity may be transferred from a TIPS ASTA to a TIPS DCA by a central bank, an ancillary system or an instructing party acting on behalf of the ancillary system.

The following types of liquidity transfer orders can be executed in TIPS:

Table 3
TIPS liquidity transfer order types

Liquidity transfer order type	Initiated	Note	Intra-/Inter-service
Immediate liquidity transfer order Enabling the immediate transfer of liquidity: <ul style="list-style-type: none"> • from CLM/RTGS/T2S to a TIPS DCA or • from a TIPS DCA to CLM/RTGS/T2S or • between a TIPS DCA and ASTA 	By the TARGET user	Available in A2A and U2A	Both
Standing order liquidity transfer (one-way only from CLM/RTGS/T2S to TIPS) Recurring transfer of a fixed amount processed every business day at certain business day events	Automatically by the system	(To be configured in CRDM)	Inter-service
Rule-based liquidity transfer order (between CLM and TIPS) Initiated upon breach of a pre-defined limit (floor/ceiling) on a TIPS DCA	Automatically by the system	(To be configured in CRDM)	Inter-service

3.1.3 TIPS DKK balance snapshot processing

After the “cut-off for CLM RTS”, the DKK balance snapshot is taken with the event “Balance snapshot processing DKK”. It includes the balances of the accounts held in DKK within the responsibility of the Danish Central Bank at that specific moment in time. All new instructions submitted after the cut-off and before the snapshot generation are rejected. The DKK balance snapshot is generated by CLM and sent to the Danish central bank.

3.1.4 End-of-day procedures - euro

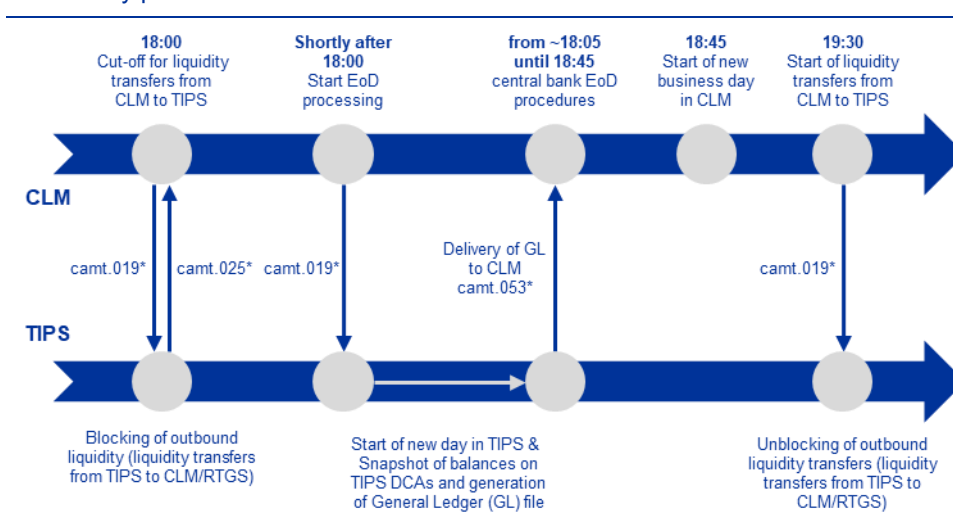

TIPS changes its business day, without any interruption to the service, shortly after the end of the CLM RTS period (i.e. shortly after 18:00 in normal situations). The change of business day depends on the interaction between TIPS and CLM and includes the following steps:

1. CLM sends a status message informing TIPS that the cut-off for liquidity transfers has been reached.

2. Any outbound liquidity transfer message reaching TIPS after the reception of this message is rejected.
3. Meanwhile, CLM, RTGS, and TIPS¹² continue to settle liquidity transfers received before the cut-off. The related notifications continue to be sent to TIPS so that all pending transactions can be aligned. TIPS continues to accept and process inbound liquidity transfers;
4. When TIPS receives confirmation of settlement for all transient liquidity transfers, it informs CLM that it may proceed.
5. When CLM completes the settlement of the pending liquidity transfers on its side and has received TIPS confirmation to proceed, it transmits another status message informing TIPS that the change of business date can be performed. This status message contains the new business date CLM is moving to. TIPS updates the status and the business date and starts gathering data on the end-of-day balances for the business day that has just ended;
6. TIPS takes a snapshot of the balances and sends the TIPS general ledger file to CLM. TIPS DCA balances at end of day are taken into account for the respective TARGET participant's balance, according to the information included in the CRDM configuration, for minimum reserve requirements and recourse to automatic marginal lending.
7. When CLM reopens (at 19:30 in normal situations), it sends another status message informing TIPS that liquidity transfers can be again accepted and processed.

The above process under normal situations is also reflected in the figure below:

Figure 3
End-of-day procedures in CLM and TIPS - euro

*The end-of-day procedure above is performed separately per currency.

¹² The cut-off time for liquidity transfers between TIPS and T2S is 17:45 in normal situations.

3.1.5 TIPS planned maintenance activities

Planned maintenance activities of TIPS may be envisaged in exceptional cases, such as in the event of an exceptional change that cannot be managed without stopping the service, or in response to a business decision taken by the relevant governance bodies. In such cases, the TIPS actors shall be notified of the resulting system unavailability.

Given the 24/7/365 nature of TIPS, it is essential that TIPS actors are informed about any planned maintenance activities as early as possible. In addition, maintenance activities should generally be planned for periods of time with low traffic.

Unlike unexpected downtime (e.g. in response to issues that must be urgently resolved), planned maintenance activities refer to a specific time period established in advance during which the operation of the TIPS service may become unavailable.

Participants are informed of any planned maintenance activities by their respective central banks and should further share this information with their reachable/instructing parties. This communication should include the:

- reason for the maintenance activities
- date and weekday
- expected time window during which the maintenance activities will take place
- expected impact on the service.

If, during the time window, it is suspected that the time needed to complete the necessary activities will exceed the scheduled and pre-announced time window, participants will be informed without undue delay. Moreover, if it is suspected that the procedure will not be completed within 15 minutes, participants are informed without undue delay.

3.1.5.1 TIPS participants' downtime activities

The rule requiring 24/7/365 availability has been revised¹³ to allow for planned maintenance or scheduled downtime, whereby such periods of non-availability are both foreseeable and short, and the TIPS users have been informed in advance.

TIPS participants¹⁴ are encouraged to use the broadcast message function offered by TIPS, which allows a TIPS DCA holder or a TIPS AS technical account holder to send a message to all other TIPS DCA holders and TIPS AS technical account holders, announcing:

- (a) "Immediate downtime start";

¹³ In line with the [SEPA Instant Credit Transfer Scheme Rulebook 2025 Version 1.0](#)

¹⁴ TIPS DCA holders or TIPS ASTA holders

(b) “Immediate downtime end”;

(c) “Planned downtime”.

When communicating planned downtime via broadcast messages, TIPS participants should send a separate message for each affected BIC11. However, if all BIC11 associated with the TIPS participant are impacted, they may opt to send a single broadcast message that references the institution’s BIC8, which collectively represents all associated BIC11.

Furthermore, when sending broadcast messages about planned downtime, TIPS participants should select the intended recipients based on the relevant currency for the message. Please be aware that the default setting for the “Recipients” field is “All.” This means that a broadcast intended for only one specific currency will automatically be shared with all currencies in TIPS. To ensure clarity and effectiveness of these notifications, TIPS participants are encouraged to verify and adjust the recipient list to target the appropriate audience.

As best practice, TIPS participants shall issue the broadcast at least one week prior to any planned downtime. Furthermore, TIPS participants are encouraged to publish the broadcast in case of an ongoing incident that is causing high number of expired transactions. In order to be kept informed, TIPS participants should regularly check the received broadcasts in the TIPS GUI, or in A2A (if they opted for receiving broadcasts).

TIPS participants shall not send “free text messages” or “insolvency messages”. The TIPS participant making use of the broadcast facility retains sole responsibility and liability for the content of any message sent.

The following example may be used as a template for the broadcast:

<i>Template for single currency settlement</i>
Please be informed that, due to <i>[add reason]</i> , the <i>[identifier of the respective participant]</i> will be temporarily unavailable for the <i>[sending/receiving/settlement]</i> of instant payments in <i>[EUR/SEK/DKK]</i> currency. The planned downtime will take place on <i>[Weekday]</i> , <i>[Day/Month/Year]</i> from <i>[specific start time CET]</i> to <i>[specific end time CET]</i> .
<i>Template for cross-currency settlement</i>
Please be informed that, due to <i>[add reason]</i> , the <i>[identifier of the respective participant]</i> will be temporarily unavailable for the <i>[sending/receiving/settlement]</i> of instant payments between <i>[insert currency pairs]</i> currency. The planned downtime will take place on <i>[Weekday]</i> , <i>[Day/Month/Year]</i> from <i>[specific start time CET]</i> to <i>[specific end time CET]</i> .

3.2 TIPS cross-currency

3.2.1 Background

The implementation of the TIPS cross-currency settlement service enables seamless cross-currency payments across all currencies that settle in TIPS¹⁵.

By including this settlement service in TIPS, instant payments originating in one of the currencies using TIPS for settlement can be credited on an account denominated in a different currency available for settlement in TIPS.

3.2.2 Addition or removal of currencies to/from the TIPS cross-currency service

Addition: Before a new pair of currencies can become operational for the exchange of cross-currency payments, both central banks responsible for the related currencies must have communicated their intention to enable such an arrangement.

Removal: Each central bank with its currency active in the cross-currency service may decide to temporarily or permanently suspend its currency's participation in the entire cross-currency service or a specific currency exchange corridor.

3.2.3 Operational procedure for updating the cross-currency mapping table

In order to enable the cross-currency settlement in TIPS, the following pre-requisite reference data updates are needed:

- (i) Configuration in CRDM¹⁶: Upon receiving the request by a TIPS participant (via TARGET Services Registration Form) to participate in cross-currency settlement in TIPS, the responsible central bank must configure in CRDM the relevant cross-currency flag that specifies whether the Authorised Account User BIC is authorised to accept cross-currency payments. The flag is set to False by default.

and

- (ii) [Step needed only in case the request relates to the PSP taking the role of exit/entry leg PSP]: Configuration of the cross-currency mapping table: In order to process cross-currency transactions, TIPS uses a mapping table that lists the possible pairs of BICs per available currency corridor. The mapping table can only be configured and updated by the TIPS Service Desk upon the request of a central

¹⁵ See [Change Request TIPS-065](#) Enhanced Linked Transaction (ELKT) model for cross-currency in TIPS.

¹⁶ Refer to [CRDM UHB](#), Chapter "Authorised Account User – New/Edit Screen"

bank. Updates will be done on a weekly basis ahead of the daily data propagation on Thursday at 17:00. A table will be then published on the ECB website providing information on the cross-currency corridors an Authorised Account User BIC participates in, specifying the business date of the update.

4 Operational procedures during abnormal situations

Because of the 24/7/365 nature of TIPS, an incident can occur at any time of day and has the same consequences on instant payment settlement whatever the hour of its emergence.

For incidents taking place outside standard support hours, the TIPS Service Desk will make use of the TIPS email notification tool to inform all central banks, as well as all TIPS DCA holders/TIPS ASTA holders/reachable parties/instructing parties that have provided their contact details for this purpose (see Fundamentals Infoguide – Chapter 2.3.1 “External communication tools”).

4.1 Operational incidents and operational procedures to be followed

4.1.1 Service continuity

TIPS is based on a three-site architecture, whereby all three sites are running simultaneously and the load of running the service is balanced among the three data centres. While smaller failures are covered by redundant elements within each site, major failures or disasters (e.g. disruption of major hardware caused by fire, flood or terrorist attacks, or by telecommunications faults) affecting just one of the three sites are managed by the TIPS nodes which are able to detect a site unavailability and can then activate a configuration change to converge towards a new topology that includes only the two remaining sites.. As multiple nodes always synchronously run in the three sites, no service interruption is expected, and no reconciliation is required.

4.1.2 Delay in delivering general ledger file to CLM

During the change of business day procedures in TIPS, the interaction between CLM and TIPS is critical, and any incident could impact both services. A delay in delivering the general ledger file from TIPS might cause a delay in the cut-off for the use of standing facilities in CLM. In such a scenario, the participants are informed by the responsible NSD.

4.1.3 Failure at central bank level

As a general rule, if there is a problem impacting a central bank's access to TIPS the central bank should, at first, rely on its own error handling measures. Should this not be possible or efficient, the central bank will rely on the Eurosystem agreed contingency arrangements. Regarding the management of reference data changes, only time-critical reference data changes will be processed. Non time-critical updates of reference data should be postponed until the problem has been resolved.

4.1.3.1 Communication of failure

Depending on national rules and procedures, the National Service Desk may inform its banking community directly about such problems.

4.1.4 Failure at ECB level

In the event of a failure at ECB level, all the above measures that apply in the case of central banks will apply.

4.1.5 Failure at NSP level

In the event of an NSP failure:

1. the TARGET Service Desk may act on behalf of the central bank;
2. if there is a failure at only one of the NSPs, the other one could be used, provided that the participant has set up the connection via both NSPs.

4.1.6 Failure at participant level (excluding Ancillary System) – euro

4.1.6.1 Communication of failure

Any operational or technical failure of a TIPS DCA holder that is known to have lasted for more than ten minutes should be reported to the respective National Service Desk as soon as possible.

4.1.6.2 Procedures for handling failure

In the event that a TIPS DCA holder encounters a problem that prevents it from settling instant payments or making immediate liquidity transfers to/from TIPS DCAs or TIPS ASTAs, including problems with their network service provider, it shall use

its own contingency means to the fullest extent possible. This includes in-house solutions as well as the GUI functionality to process liquidity transfers.

If its own contingency means are not enough, the participant may rely on the support offered by its NSD for liquidity transfers, queries and reference data changes on its behalf. The detailed contingency means result from the bilateral relationship between a participant and its central bank. If the issue cannot be resolved, the responsible NSD may also report the issue to the TARGET Service Desk in order to receive support on a best effort basis.

4.1.6.3 Participants' incident reporting

Once a participant is live in TARGET, it is closely monitored¹⁷ by the relevant Central Bank. The participant shall inform the responsible central bank about an internal incident as soon as possible if the internal system of a participant is affected by an operational or technical disruption lasting more than 10 minutes. Once the participant has resumed operations, the central bank may send an incident report form ([Annex III](#)) to this institution for completion. This report requires the participant to describe the root cause of the problem, the impact, the steps taken to resolve the issue and any mitigating action that should prevent the incident from reoccurring.

It is up to the relevant central bank to decide whether an incident report is required. The decisive factor is whether the incident had an impact on the smooth functioning of TIPS or other participants.

If a central bank observes repetitive short service interruptions from a participant lasting less than 30 minutes, it should contact that participant and request for a clarification which could ultimately result in the need for a formal response.

Incidents affecting the participant's availability are probably the only ones that could be identified by the system operator itself by comparing actual payment processing with normal patterns. When a central bank notices a deviation from the normal pattern and suspects that the participant may be experiencing potentially serious availability problems it has not been informed about, the participant will be contacted, and an explanation will be requested. However, the participants are encouraged to carry out regular and possibly intraday account reconciliations using the different tools and features offered by the system, such as for example daily account statements (camt.053) and sender notification (pacs.008) messages.

Apart from those incidents affecting the availability of participants' internal system, participants shall also report security problems concerning confidentiality and integrity, such as a security-related incident in their technical infrastructure and, where appropriate, security-related incidents that occur in the technical infrastructure of the third-party providers. Reporting such cases as quickly as possible is essential for ensuring that a meaningful and concise communication can be prepared and

¹⁷ CP VII (7.7.4): System operator activities should also involve "monitoring the security and operational reliability of the participants, for example the availability of their components during normal business hours".

possibly other measures reassuring financial markets and the public can be applied. These types of incidents may not be visible for the monitoring central bank. Instead, as per the Guideline Annex I, Part I, Article 20, a participant shall proactively report on these to its central bank.

4.1.7 Failure at TIPS ancillary system level

Any operational or technical failure of an ancillary system (AS) in TIPS lasting more than 10 minutes should be reported to the respective NSD.

If, when assessing the problem, it becomes apparent that it might have originated from a TIPS failure, the standard incident management procedures will be initiated.

An AS is expected to have its own business continuity management arrangements in place to cope with any internal technical or operational incident that may arise and to minimise the impact on instant payments settlement and restore its processing as quickly as possible. In this regard, the AS will coordinate communication on the incident with its settlement members.

If needed, the respective NSD may act on behalf of the AS for intra-service liquidity transfers in TIPS, queries and reference data changes. A central bank may bilaterally agree with an AS under its scope to offer further support. However, this is at the central bank's discretion and therefore not within the scope of the Infoguide.

Simulation of the receipt of technical notification message

A problem in delivering or processing a technical notification message¹⁸ may result in a blockage of the settlement of instant payments on the AS side. Accordingly, it is strongly recommended that ancillary systems are able to simulate the receipt of such messages. This should be done on the AS' own initiative following a check in the TIPS GUI or on the basis of a confirmation of the settlement result received from the NSD via the local communication means in place. Ultimately, the AS can choose the most appropriate solution in agreement with its NSD.

4.2 Suspension and extraordinary termination procedures – euro

4.2.1 Suspension or extraordinary termination of TIPS DCA holder

1. Procedure for suspending or terminating a TIPS DCA holder

¹⁸ For example: BankToCustomerDebitCreditNotification (camt.054), Receipt (camt.025), ReturnAccount (camt.004).

If it proves necessary to suspend or terminate a TIPS DCA holder, the respective central bank shall:

- (a) Block, in the TIPS GUI, the TIPS DCA holder for debiting and crediting, which then results in an equivalent blocking on all accounts owned by that participant and all CMBs linked to those accounts with immediate effect on a 24/7/365 basis.

It is also possible for the central bank to block parties/accounts/CMBs directly in CRDM, which will be propagated instantly to TIPS with immediate effect. This implies that the information on the blocking of a party/account/CMB will be available in CRDM. The blocking of a TIPS DCA holder does not affect reserved amounts (i.e. if an amount is already reserved for an ongoing payment when the blocking is applied, the payment transaction will be completed). If the suspension takes place outside standard support hours (e.g. on a weekend), each central bank must ensure that appropriate procedures are in place so that the necessary action can be taken. If all required actions cannot be executed, the TIPS Service Desk will block the participant on the central bank's behalf.

- (b) Inform other central banks and all participants about the TIPS DCA suspension or termination, via TIPS GUI broadcast.

Consequently, the central banks thus informed shall notify their community via the communication channels used at national level.

- (c) Following a suspension, the funds may remain on the TIPS DCA.
- (d) In the event of termination, the central bank will transfer any remaining liquidity on the TIPS DCA to the participant's MCA or a different account, as decided on a case-by-case basis (this is possible when the TIPS DCA is blocked but also when the TIPS DCA is closed), close the TIPS DCA, and then delete the TIPS DCA if necessary.
- (e) In case of suspension or termination of a TIPS DCA holder, the relevant NSD will inform the TIPS ACHs of their community about the specific suspension or termination, using the communication channels agreed at national level. The TIPS ACHs are responsible for taking all necessary actions according to their own procedures.

TIPS DCA holders are bound by the actions taken by their reachable parties and should any issue arise from their actions, the TIPS DCA holders must respond accordingly (blocking of CMB, informing their central bank, etc.).

2. Effects of suspending TIPS DCA holder

If a TIPS DCA holder is suspended from a central bank's TARGET component system on grounds other than those specified in Part 1, Article 25(1) (a) of the TARGET Guideline, the suspended TIPS DCA holder's central bank shall either:

- (a) reject all of its incoming cash transfer orders;
- (b) reject all of its outgoing cash transfer orders; or
- (c) reject both incoming and outgoing cash transfer orders.

If a TIPS DCA holder is suspended on the grounds specified in Part 1, Article 25(1) (a) of the TARGET Guideline, the suspended TIPS DCA holder's central bank shall reject all incoming and outgoing payment orders.

The responsible central bank shall process instant payment orders of a TIPS DCA holder whose participation in the relevant TARGET component system has been suspended or terminated under Part 1, Article 25(1) or (2) of the TARGET Guideline and in relation to which the central bank has reserved funds on a TIPS DCA pursuant to Article 6(3) (b) prior to the suspension or termination.

4.2.2 Suspension or extraordinary termination of TIPS AS technical account holder

If a TIPS ASTA holder is suspended from a central bank's TARGET component system on grounds other than those specified in Part I, Article 25(1) (a) of the TARGET Guideline, the central bank of the suspended TIPS ASTA holder shall either:

- 1. reject all of its incoming cash transfer orders;
- 2. reject all of its outgoing cash transfer orders; or
- 3. reject both incoming and outgoing cash transfer orders.

If a TIPS ASTA holder is suspended from TARGET, the central bank of the suspended TIPS ASTA holder shall reject all incoming and outgoing payment orders.

The responsible central bank shall process instant payment orders of a TIPS ASTA holder whose participation in the relevant TARGET component system has been suspended or terminated under Part I, Article 25(1) or (2) of the TARGET Guideline and in relation to which the central bank has reserved funds on a TIPS ASTA holder pursuant to Article 4(3) (b) prior to the suspension or termination.

4.3 Insolvency of a TIPS DCA or TIPS ASTA holder that participates in the TIPS cross-currency service

Upon being informed of the insolvency of a participant, in accordance with Article 6 of the SFD, that is active in the cross-currency service, the responsible central bank decides on whether to suspend that participant and informs the other central banks that are responsible for the currencies the insolvent participant exchanges cross-currency payments with.

Consequently, the central banks informed notify their community via the communication channels used at national level.

4.4 Operational procedures related to information security events

In the unlikely case a participant is affected by an information security event (such as a cyberattack), at first instance it is the responsibility of the respective participant to implement all local measures to contain the issue internally and avoid any spillover to TIPS. A key measure could be the disabling of the local connection by the participant (or its instructing party).

The participant should inform its responsible NSD of the event without undue delay.

1. Information gathering

Upon being notified of an information security event detected by a participant, the decision on further actions by the responsible central bank would largely depend on the availability of relevant information. Gathering such information is primarily within the prerogatives of the home central bank of the participant concerned and the process may be based on the data provided by the participant or obtained from other available sources (e.g. TIPS Service Desk reports). Relevant information may encompass the following aspects:

- (a) **Impacted transactions:** the type and details of the fraudulent messages together with the total number, value, time of submission/settlement and receivers of the impacted messages.
- (b) **Impacted connectivity channel:** information on the participant's connection type (NSP) and possible use of a service bureau, with all related details.
- (c) **Already informed parties:** seeking confirmation that the participant's banking supervisor and relevant law enforcement authorities were notified. If this is not the case, the TIPS DCA holder should be reminded/advised to inform them accordingly.

- (d) **Cross-border aspects:** information on whether the same infrastructure is used to connect to several TARGET component systems and other cross-border considerations (if relevant).
- (e) **Information on cash transfer orders initiated by the participant in the period preceding the instance of fraud.** The data can be obtained via ex-post scrutiny of the instant payments and liquidity transfers initiated by the participant before the information security breach occurred. The investigation could help to identify when the fraud/fraud attempt took place in comparison to when it was detected.
- (f) **Any other relevant information,** including initial assumptions as to the source of the fraud.

2. Mitigation measures

Should the local containment measures of the participant (or its instructing party) prove insufficient to mitigate the event, the responsible NSD may offer to apply the following measures:

- (a) To safeguard the funds, the liquidity can be transferred to a CLM MCA or RTGS DCA of the responsible NCB through an inter-service liquidity transfer.
- (b) Block the TIPS account.
- (c) Exclusion of the participant from the TIPS CGU by the NSP. Following a request from the responsible central bank to the TIPS Service Desk, the latter will ask the NSP to implement the exclusion from the TIPS CGU.

If a participant is informed or suspects that the authorised account user on one of its CMBs is affected by an information security event, the participant may block the CMB. Only when the participant encounters an issue preventing it from performing the action itself may it request its responsible NSD to act on its behalf.

3. Additional support for the affected participant

In addition to the mechanisms described above, the respective central bank may also provide further assistance to a participant affected by a fraud event. Depending on the circumstances and assessment of the fraud event, the following measures may be considered:

- **Support in recovering fraudulently processed cash transfer orders:** the support provided to the participant may include, for example, assistance in collecting the contact details and other relevant information of the recipients of cash transfer orders (if necessary, in collaboration with other central banks).
- **Immediate investigation on the source of the fraud:** the central bank, possibly liaising with the TIPS Service Desk, may provide further support in identifying the source, spreading and impact of the fraudulent activity.

4.5 TIPS Recovery – for the euro

The TIPS Recovery operational procedure is invoked in the event of the following exceptional scenarios:

1. Identification of an issue that may compromise the integrity of data within TIPS.

Note: Data integrity refers to the accuracy, completeness, consistency, and validity of an organisation's data.

2. Massive data loss caused by intentional or unintentional destruction of information, which may be caused by individuals and/or processes, from within or outside of an organisation.

If detection originates from a participant, the participant must immediately report the issue to the NSD of their central bank.

Table 4
TIPS Recovery operational procedure

	Label	Party responsible	Description
1	Detection	NSDs TIPS Service Desk Eurosystem central banks NSPs Participants	<p>Conditions</p> <ol style="list-style-type: none"> Detection of an issue (potentially) compromising the integrity of data in TIPS. <p>Note: the integrity of data is defined in terms of accuracy, completeness, consistency, and validity of an organization's data.</p> <ol style="list-style-type: none"> Massive data loss caused by intentional or unintentional destruction of information that can be caused by people and/or processes from within or outside of an organization.
2	Precautionary measures	NSDs TIPS Service Desk T2/TIPS Coordination Desk	<p>In case of potential data integrity issue/massive loss of data in TIPS, the following precautionary measures are considered:</p> <ul style="list-style-type: none"> closure of A2A inbound traffic, closure of A2A TIPS channels with T2 and non-euro connected RTGS systems to stop all liquidity transfers. Closure of the U2A access in TIPS interruption of NSPs traffic to TIPS <p>The TIPS participants are informed via:</p> <ol style="list-style-type: none"> The ECB website Communication channels used at the national level. <p>Note: Communication via GUI broadcast in TIPS is not possible once the U2A access closes.</p>
3	Decision to invoke the TIPS Recovery procedure	TIPS Service Desk TIPS participants	<p>If, upon investigation by the TIPS Service Desk, evidence shows that the integrity of data has been compromised or a massive data loss has materialised, the Eurosystem may decide to invoke the TIPS Recovery procedure.</p> <p>The TIPS participants are informed of the decision to invoke the TIPS Recovery procedure via:</p> <ol style="list-style-type: none"> The ECB website Communication channels used at the national level.
4	TIPS is restarted with zero balance	TIPS Service Desk	<p>TIPS is restarted with zero balances. All TIPS DCAs and TIPS ASTAs will display zero balances.</p> <p>The TIPS Service Desk will proceed with the necessary activities to successfully reopen TIPS for settlement and to reopen U2A access in TIPS (GUI).</p>
5	NSDs request participants to provide their balances	Participants NSDs	<p>Given that TIPS is restarted with zero balances, immediate action is initiated to begin reconciliation activities and rebuild the previous balances in the TIPS accounts.</p> <p>The NSDs contact the TIPS participants via the communication channels used at a national level (e.g. email) to request the completion of a specific form (see Annex IV). The email request will include explanatory text detailing the purpose of the request along with any additional necessary information.</p> <p>Through this form, TIPS participants are asked to report the balances of their TIPS DCAs and ASTAs as recorded in their internal systems at the last point in time prior to TIPS being restored with zero balances.</p> <p>Important: The email request will specify the exact time when TIPS was recovered with zero balances. The balances reported by the TIPS participants in the form should be retrieved in accordance with this time reference provided.</p> <p>Important: Participants (TIPS DCA and ASTA holders) submit the form to their NSDs, reporting the balances as shown in their internal system at the time requested by the NSD (i.e. TIPS restart reference balance). In order to identify the balance to be reported to the responsible NSD, participants need to reconcile their balance starting from the last balance for which they had an internal reconciliation and then account for all debits and credits on the DCA/ASTA up to the timestamp specified by their responsible NSD. No hard deadline is imposed to the TIPS participants by</p>

	Label	Party responsible	Description
			when they need to return the filled-out form to their NSD. The form must be signed by individual(s) with full capacity and authority to represent the TIPS participant, as defined by the responsible NSD.
6	TIPS operating normally and settlement is resumed	NSDs TIPS Service Desk T2/TIPS Coordination Desk	<p>The TIPS Service Desk completes the necessary activities to successfully reopen TIPS. As soon as TIPS is operating normally, and settlement can be resumed, the TIPS participants are informed that:</p> <ul style="list-style-type: none"> • TIPS has been reopened successfully and is operating normally • TIPS participants may transfer liquidity to their TIPS DCAs from their MCAs/RTGS DCAs/T2S DCAs. Note: At the restart of TIPS with zero balances, and until liquidity is injected to the TIPS accounts, some instant payments could be rejected due to insufficient funds. <p>The TIPS participants receive updated information via:</p> <ol style="list-style-type: none"> a) the ECB website, b) GUI broadcast c) communication channels used at national level.
7	Adjustment (funding) of the TIPS ASTA balances	T2/TIPS Coordination Desk	<p>The T2/TIPS Coordination Desk of the ECB performs a liquidity transfer from the "ECB TIPS DCA" to each of the TIPS ASTAs for the amount reported by the respective ACHs to their NCBs via the specific form. The ECB will receive this form via the responsible central bank of the ASTA. The ECB informs the NCB once the liquidity transfer to the respective ASTA is settled.</p> <p>Note: at this point, all actions for TIPS ASTAs are completed and the incident is considered resolved for the ACHs.</p>
8	Adjustment (funding) of the TIPS DCA balances	T2/TIPS Coordination Desk NSDs	<p>Each NCB funds their participants' TIPS DCAs by performing a liquidity transfer to each of the TIPS DCAs. The funded amount is equal to the amount reported by the participants via the specific form requested in the Step 5 above.</p> <p>Note: at this point, all actions for TIPS DCAs are completed and the incident is considered resolved for the TIPS DCA holders.</p>

5 Business continuity management

For an overview of business continuity management, please see Chapter 7 of the Fundamentals Infoguide.

5.1 TIPS business continuity management model

The TIPS business continuity model envisages an operational model based on service continuity arrangements (i.e. “one region, three sites”) and contingency arrangements.

5.1.1 TIPS service continuity arrangements

The TIPS architecture provides a high level of resilience thanks to application redundancy and its self-healing capability. The operational model of TIPS is based on the “one region, three sites” model and an infrastructure realised by a cluster of processing nodes, which play different roles. A subset of these nodes is responsible for settlement activities and can be seen as multiple instances of the settlement engine running in parallel. At each point in time, only one of those instances plays the role of “primary node” and sends outbound messages from TIPS. All the remaining instances act as “secondary node”. At a given point in time, in case of need each “secondary node” is ready to take up the role and replace the “primary node” in its activity. Consequently, if certain local nodes within the application cluster become unavailable or one out of the three sites becomes unavailable, TIPS adapts its behaviour as far as possible to continue operating (self-healing capability).

The self-healing capability is applied to the operational database of TIPS. However, the approach for the informational database is different, since it is spread over only two sites. At each point in time, two copies of the full informational database are kept aligned between the two sites. One active copy is stored on one site, which can be accessed in write mode by the whole TIPS application and is being periodically updated with data arriving from the operational database. The second copy, stored on the other site, can be accessed in read-only mode.

Transactional integrity and data persistence are ensured by a dedicated journaling component, storing all essential information. The status of TIPS can be determined based on its input stream (unlike in CLM and RTGS, where optimisation mechanisms and manual modification of a payment queue can result in multiple outputs based on the same input). Therefore, the journaling component can be used at any time to rebuild the current status of TIPS.

In the event of a site failover, the operational database remains fully active thanks to the self-healing approach. The new “primary node” is selected from among the nodes of the site to which TIPS is being moved. Throughout the site failover, TIPS

participants are informed accordingly about the status and availability of the informational database.

5.1.2 TIPS contingency arrangements

Due to the nature of instant payments, the contingency arrangements for TIPS are limited. In the event of a failure at the level of a TIPS DCA holder or a TIPS ACH, the responsible NSD may act on behalf of the TIPS participants for liquidity transfers, queries and reference data updates, based on local agreements.

6 Testing activities for TIPS

6.1 Overview of testing activities for TIPS

The following table provides an overview of the tests to be performed.

Table 5
Overview of testing activities for TIPS

Test name	Environment	Frequency	Participation for critical participants	Participation for non-critical participants
BCM tests				
Service continuity				
Intra-regional one site unavailability	PROD All currencies	Once a year	N/A	N/A

6.2 BCM tests

6.2.1 Service continuity tests

TIPS intra-region one site unavailability

No specific contingency procedures are foreseen due to the self-healing capability of TIPS. However, the scenario in which one of the three data centres becomes unavailable is verified biannually in the production environment, though without the involvement of participants.

Description of the TIPS failover can be found in “[Chapter 5.1.1. TIPS service continuity arrangements](#)” of this document.

7 Financial management

The process of collecting TIPS revenues takes place once a month.

Further information on the receipt and payment of TIPS invoices can be found in Chapter 10 “Financial management” of the Fundamentals Infoguide.

8 Change, release and deployment management

The change, release and deployment management process (hereafter referred to as CRM) defines how functional changes to TIPS are managed. The CRM covers the life cycle of change requests, from the moment a change is formally requested to its release in the production environment, including planning and agreement on the content of a release, and the consequent design, build, configuration and testing of the new software and hardware components.

8.1 CRM procedures for TIPS

The change and release management processes govern the procedure for managing modifications and enhancements requested to TIPS during its lifecycle, from the time a change request is formally requested until it reaches its final status (i.e. withdrawn, rejected or implemented in a release).

8.1.1 Main applicable deadlines

Change requests (CRs) can be raised at any point in time. However, in order to ensure that a change request can be considered for implementation in a particular release, under normal circumstances, a change request shall be raised at the latest approximately 19 months before the planned go-live of its target release. The NSDs shall inform their TIPS participants of the applicable deadline.

Change requests and solutions to problems are allocated to a release scope at least 12 months ahead of the planned go-live of that specific release. The content of the release including the assigned change requests and the main milestones of the release are published on the [ECB's website](#).

8.1.2 Change management

Change management governs the life cycle of requested modifications and enhancements that may result in functional or non-functional changes.

The ECB, all central banks in TARGET (euro and non-euro), TIPS participants and the 4CB may formally **submit a change request** (see form in [Annex II](#)).

8.1.3 Release management

Release management is a specific process for assessing and ranking change requests and production problems and for defining the scope and the proposed target implementation date of a new TIPS release. This ensures that all aspects of a change, both technical and non-technical, are taken into account, including coordination aspects with other TARGET services, if needed. Release management addresses all types of possible releases.

Note: the deployment of the release to the production environment via rolling upgrade usually lasts one week.

- (a) **A yearly release** following the third weekend in November;
 - includes a set of software changes, changes stemming from the SCT Inst Scheme, as well as fixes or resolution of identified production problems;
- (b) **An optional release** following the second weekend in June, if needed;
 - generally required only in case of changes or fixes/resolutions to identified production problems that, owing to their urgency or criticality, cannot wait for the regular release in November
- (c) **Changes to common components** may happen outside the standard TIPS release schedule.

8.1.4 Deployment management

Deployment management organises the rollout of TIPS software releases¹⁹, configurable parameter changes and/or any associated operational service changes to the User Testing pre-production environment (UTEST) and the production environment (PROD).

8.1.4.1 Standard deployment path

The standard deployment path for a release follows a phased approach, meaning it starts with a deployment in the EAC environment, followed by UTEST environment and finally the PROD environment. Except as otherwise agreed by the TIPS-WG, the releases are deployed to production on a rolling basis during the week when the release is planned.

Prior to the deployment, the new release is first tested by the Eurosystem in the EAC environment. That is followed by user testing in the UTEST environment.

¹⁹ TIPS software releases include changes (change requests and fixes/resolutions to production problems/release defects) to the dedicated TIPS components as well as all changes to common components.

Figure 4
TIPS environments for release deployment

8.1.4.2 Deployment actions

Important note related to the expected behaviour of TIPS during the rolling upgrade:

If a TIPS release introduces (i) a new message type to be used in TIPS or (ii) new fields in a message type or changes to fields in a message type already used in TIPS, then in order to avoid rejections, **participants are advised to:**

- (a) send to TIPS the new message type from the day after the rolling upgrade has been completed. During the rolling upgrade, participants are advised to continue sending the old version of the message.
- (b) have their systems ready to receive from TIPS both the old and new versions of the message type during the rolling upgrade

8.1.4.3 Post-deployment activities

In general, in order to evaluate release and deployment effectiveness, a post implementation review is undertaken to capture experiences and feedback on the satisfaction with the deployment and the potential lessons learnt.

8.2 Emergency changes and hotfixes

Emergency change means deployment of a change directly to the production environment by the TIPS Service Desk to resolve or avoid a major incident that could potentially result in the complete unavailability of some or all services for which no work-around is available.

The following categories of changes are discussed:

- Emergency changes
- Urgent production problems to be implemented as a hotfix

Any other changes shall be considered as part of the normal change and release management procedures applicable for the annual releases.

8.2.1 Emergency change deployment

In the event of system difficulties, it may be decided to execute an immediate change in order to resume the normal operations of TIPS. Any such emergency change is performed directly in the PROD environment and does not go through all testing stages before its deployment.

8.2.2 Hotfix deployment

A hotfix is a change that includes all software corrections to be delivered in advance of a normal release due to the urgency of the fix (i.e. a fix for production problems that could lead to substantial operational issues, require heavy workarounds and/or lead to any other clear increase in the operational risk level). Due to time constraints, the change management process or the standard release management process cannot be followed for these changes and only the hotfix release management process shall be applied.

Contrary to an emergency change, a hotfix is tested – to the extent possible – in the UTEST environment prior to its deployment to PROD.

General incident information	
Incident ID (to be assigned by the central bank responsible)	Click or tap here to enter text.
Status	<input type="checkbox"/> Interim <input type="checkbox"/> Final ²¹

²¹ An incident report is considered "final" when the implementation date of the remedial measure is indicated.

Type of failing component	<input type="checkbox"/> Hardware <input type="checkbox"/> Software ²² <input type="checkbox"/> Network ²³ <input type="checkbox"/> Infrastructure ²⁴ <input type="checkbox"/> Human error
Date and time the incident started (CET)	Click or tap to enter a date.
Date and time the incident ended (CET)	Click or tap to enter a date.
Duration	Click or tap here to enter text.

Description of the incident

The summary should be a high-level description suitable for senior management and avoiding technical language to the extent possible. The summary should include for instance the following elements:

- basic description of the events and their impact
- services/systems affected by the incident and
- external effects (e.g. other TARGET participants affected).

Click or tap here to enter text.

Details of the cause of the incident

Specifically, the root cause of the incident - who, what, where, when, how.

Click or tap here to enter text.

Remedial action

This section should include for instance the following elements:

- action taken to resolve the incident and
- measures taken to prevent the incident from reoccurring/implementation scheduled for.

Initial resolution:

Specifications

The National Service Desk will inform the TIPS participants of the time reference via email together with the request to fill in this form. The balances provided by the TIPS participants in this form should be retrieved in accordance with the time reference provided.

Participants shall not provide the National Service Desks with the balances from the network protocol envelope of the last successful message from TIPS (pacs.002, in the "Additional info" property described in the "MEPT - Message Exchange Processing for TIPS").

The signer(s) declare(s) to have the full capacity and authority to confirm that the information provided above is correct.
